# MAXIS

Inspired by James Lovelock's Gaia hypothesis, Sim Earth looks at the world as one interrelated living organism offering you the ultimate experience in planet management. Design and nurture planets from their creation through the evolution of life to the development of intelligence and technology that can reach for the stars.

TM & © 1990 Maxis and Will Wright. All rights reserved.

AVAILABLE FOR: Macintosh, IBM PC, Windows and Amiga.

CU AMIGA 93%  
"Staggering in every way. A once in-a-lifetime product. Simply incredible."

\*Choose from seven different planet scenarios.

\*Rule unlimited random worlds.

\*Terratorm Venus and Mars.

\*View your worlds as flat projections or spinning globes.

\*Unleash volcanoes, earthquakes, meteors and tidal waves.

\*Choose from 24 battlefields.

\*Use the powerful icon-driven command language: with a simple point and click, robots can be instructed to commence in full melee.

\*Challenge your friends (and enemies) through network support for up to four machines.

\*Use modem and serial link to mix and match games on Macintosh, Amiga or Windows versions.

AMIGA  
FORMAT 90%  
"Perfect hook-up game for up to four players."  
"Plenty of variation in gameplay and scenarios."

AVAILABLE FOR: Macintosh, Windows and Amiga.

Armed with bombs, bullets, missiles, grenades and more, you control teams of Robots that compete in five different sports: Survival, Treasure Hunt, Capture the Flag, Hostage and Baseball. By combining the tactical challenge of chess with the intensity of guerrilla warfare, RoboSport provokes total strategic mayhem. TM & © 1991 Maxis and Edward Kihare. All rights reserved.

OCEAN SOFTWARE LIMITED . 2 CASTLE STREET . CASTLEFIELD . MANCHESTER

# MAGNETIC

Sure A-Train has trains... but there's a lot more to it than making tracks. This new simulation gives you the triple challenge of designing and running a profitable railroad, growing a city and building a financial empire. You can borrow money, invest in subsidiary business and dabble in the stock market as well. Six scenarios will take all the organisational talent, planning skills and fiscal genius you've got. Maybe more. TM & © 1991 Artdink and Maxis. All rights reserved.

\*Simulated 3-D graphics provide map and satellite views.

\*Choose from 19 different train engines.

\*Pick any 24 OTC stocks to reap extra profits.

\*Build apartments, offices, factories, ski resorts, amusement parks and more.

\*Get all of the professional advice you need from the many on-screen experts in A-Train.

AVAILABLE FOR: IBM PC, Macintosh and Amiga.

# CU AMIGA CONTENTS

## 20 SHAPE-SHIFTING ON THE AMIGA

As the Morph Wars hot up, CU Amiga takes a look at three of the most popular morphing packages to see which offers the most features and gets the best results. Digital visual effects are the latest buzzword on the Amiga as a whole host of strange visual effects have been opened up by these new and exciting packages. If you thought *D-Paint* was amazing just wait until you see what these supercharged programs are capable of. John Kennedy casts his critical eye over BlackBelt's *ImageMaster*, ASDG's *MorphPlus*, and GVP's *Cinemorph*. For the low-down on how to emulate the graphical tricks of *Terminator 2*, turn to page 20!

## 163 AMIGA WORKSHOP

If you're looking for the latest Amiga book reviews, local club information, or a DIY guide to programming in C, then the Amiga Workshop is the place to be. We've also got six pages of questions and answers, a feature on Amiga robotics and the second part of our Cix review. What more could you want?!

## SPECIALS

### AMIGA GUIDE NO.2

Our 32-page supplement concentrates on Amiga games and gives an extended CU Amiga guide to which ones offer the best value for money. Don't expect one of those boring top-100 guides that seem to be all the rage - instead we've taken a look at all the different gaming genres that exist and have nominated our top games from each one. To find out more, turn to page 162 now for your free Amiga Guide. Essential!

## OFF THE CUFF

### EDITORIAL

Dan Slingsby - Editor

With absolutely no advance publicity (except for our exclusive news story last month), Commodore have unveiled yet another new addition to the Amiga

family of home computers. The A1200 is a cut-down version of the A4000 (reviewed last issue). The best bit, though, is the amazing price - just £399. When you consider the machine's specifications (see page 88 for a full review), it really does represent incredible value for money and must be the most significant launch from Commodore since the A1000/A500. Quite where this leaves the A600 is anybody's guess. Nearly 100,000 have been sold since its launch, many at the old price point of £399. I think Commodore will have successfully alienated many of those buyers who will now think they're stuck with an obsolete machine with out-dated technology. And they'd be quite right, too! The only honourable thing for Commodore to do would be to introduce some kind of trade-in deal for old Amigas, but I can't really see them doing that until well after the Christmas selling season is over.

Rumours have it that the A600 might even be discontinued altogether. This wouldn't surprise A500+ owners who had a similar fate befall their machine after it was on sale for less than five months. The sensible thing to do, if economics allow, would be to reduce the price of the A600 even further to around £250 or even £199 and let the machine go head-to-head with the SNES and the Megadrive. If that were to happen, the Amiga's future as a popular home computer would be assured. Before I run out of space entirely, I'd just like to say adios to Tom Glenister, CU Amiga's Ad Manager for the last four years. Our resident expert on all things avionic has decided it's time to move on and has taken up a new position as Ad Manager for the 2000AD comics group. Everone at CU Amiga wishes him well in his new career. Splundig Vur Thrigg.

ITY REVIEW . PRODUCTIVITY REVIEWS . PRODUC

This month we've got full reviews of the new A1200, GVP's excellent new genlock, an internal hard drive for the CDTV, and Domark's 3D Construction Kit 2. As well as that little lot, there's also reviews of Opal Vision, Vidi 12, Final Copy 2 and a feature on memory upgrades, plus all our regular columns and guides. Phew!

At last, *Alien³* makes it onto the Amiga and we've got the scoop review starting on page 43. As well as that blockbusting game, we've also got reviews of Ubisoft's Superstar-rated nut 'em up, *BC Kid*, Thallion's *No Second Prize* bike sim and Gremlin's *Mansell* racing game. Plus another 13 games put to the test!

# COVERDISKS

Our December coverdisks are absolutely packed with programs and games. We've got an exclusive graphic manipulation package, the latest virus checker, and more games than Hamleys.

## DISK 46

*Picture Box* is the star attraction of our first coverdisk. This specially commissioned graphics program enables you to manipulate, distort and enhance a variety of images for your delectation and delight. If you're a regular user of *Pixmate* or *Butcher*, you'll almost certainly enjoy this one, and if you've never come across such a program, then a whole new world of graphical tricks is opened up to you for the first time. There's also the latest versions of *Sysinfo* and *Virus Checker* to keep your Amiga in tip top health as well as yet more samples, an updated version of *Galaga* and – wait for it – an on-disk cheat for Team 17's *Project X*. This superb blaster arrived on our Amiga without a cheat mode, so we've teamed up with the Wakefield-based outfit to give you a level skip and infinite everything. And remember, you saw it here first!

## DISK 47

Not to be outdone, our second disk features two brilliant playable demos as well as a special rolling demo of the Christmas number one – *Street Fighter 2*! *BC Kid* takes you back to the Stone Age and puts you in control of a skidhead neanderthal as he head-butts his way across three dino-infested stages of this great new game. And if you'd rather try your hand at a puzzle game instead of a platform romp, then we've also got something for you in the form of the totally addictive *Bill's Tomato Game* – a true brainstrainer destined to have you pulling your hair out in frustration. But leaving the best until last, there's also a special rolling demo of the beat 'em up that everyone is talking about. In our exclusive level Ryu comes up against Chun Li in a battle royale. Who will win? Find out by loading up now!

Boost your imagination  
as you discover...

# FANTASTIC WORLDS

## MEGALOMANIA

Play a god like figure warring with four other god like figures for domination of a new planet.

## POPULOUS

You have a group of followers, the greater their achievements, the more power you wield... To fight the Evil.

## WONDERLAND

You will be confronted by puzzles, puns and challenges to keep you within wonderland's magical domains for hundred of hours.

## PIRATES

You will achieve your goals - wealth, power and prestige - if you choose the most lucrative expeditions and forge the most fruitful negotiations.

## REALMS

You are the king and you can take complete control of your destiny as you attempt to dominate the world.

## GOING BOLDLY AGAIN...

Now that the BBC has started repeating Star Trek, it looks like a whole new generation will be glued to their screens on Wednesday as Captain Kirk snogs all the best women, McCoy knocks back the Sorrian brandy and Spock delivers his lines marginally better than a plank of wood could manage. And now, thanks to a change of heart by US label, Interplay, Amiga owners will soon be able to play the computer game based on the cult sci-fi series!

Earlier in the year, we carried a report stating that Interplay had abandoned any ideas of bringing their hit PC game based on the exploits of the inspired 60's show to the Amiga. It was felt that there was no way their brilliant adventure game would translate across to the Amiga and the project was quietly abandoned. But, due to unrelenting pressure, Interplay have reconsidered their earlier decision and have already started work on the Amiga conversion. Rumour has it that there will also be a special A1200 version, produced separately from the A600 game, which will be capable of emulating all that the PC game was capable of and more besides.

Needless to say, we'll bring you more news soon...

## THIRD PARTY CD-ROM ARRIVES

Almathera Systems, producers of the *Demo Collection CD* reviewed in the November issue of CU Amiga, have just launched their own range Amiga-compatible CD-ROM drives.

Based around the Toshiba SCSI CD-ROM units, they open up the world of CD-ROM to anyone who uses an Amiga 1500, 2000, 3000 or 4000, and offers an alternative to Commodore's A570 drive for owners of the A500. The Almathera CD drive is billed as being twice as fast as the CDTV (and the A570), with a quoted CDTV compatibility level of 90%. The unit is capable of reading 'most' CDTV, ISO9660 (PC), High Sierra and Apple HFS format CDs, and can also play normal audio CDs via a Workbench control panel, although this is only available for machines operating on a 2.0 or higher Kickstart.

The Almathera CD-ROM drive requires one of the following interfaces for all Amigas except the A3000: ALF 3, Commodore A2091, Commodore A590, GVP Impact II, ICD AdSCSI, IVS Trumpcard Pro, Microbotics Hardframe, Supra Wordsync, Xetec Fasttrack, Mini Fastcard and Fastcard Plus. Almathera are offering internal kits for £395, external kits for £495, with an additional £100 if a SCSI interface card is required. Contact Almathera Systems on 081 683 6418.

## BAN THIS COMPUTER DEATH GAME

Ahhh, thought that would get your attention. The headline printed above recently adorned a highly-charged piece of investigative journalism by that fine upholder of moral standards,

the Today newspaper. According to the tabloid, Ubisoft's brilliant bomb'n'run game, *Dynablaster*, encourages children to 'blow up their friends' and is a thoroughly nasty piece of work, especially as 'the IRA is poised to launch a bombing blitz' this Christmas. I mean, look, this has got to be some kind of joke... doesn't it?!

## HARLEQUIN PRICES SLASHED

Amiga Centre Scotland, distributors of the Harlequin 32-bit graphics boards, have sliced £200 off the retail prices of the whole range. Prices are now down to £875 for the 1500 model, £955 for the 2000, £1035 for the 3000 and £1195 for the 4000. The slideshow utility, *Slide 32*, that comes free with the Harlequin, now has 56 different types of wipes and fades available. *TV Paint*, the paint package that accompanies the Harlequin, has just spawned *TV Paint Junior*, a cut-down version off the original with the distinct advantage of a massive price cut from the original £900 to just £160. Finally, *ImageMr* (formerly *ImageMaster*) has been revised yet again, and now stands at version 9.20. Loads of minor improvements have been implemented, along with new features such as 'onion skin' capability and a new 'warp morph' option added to the available processes. Contact Amiga Centre Scotland 089 687 583.

## MOTOROLA 68060 IN THE PIPELINE

Technology moves relentlessly on, as news begins to come in of the latest update of the 680XX micro processor family. For the tech-heads out there, here's the spec:

- \* 32-bit processor with pipelined architecture
- \* 2 million transistors
- \* 3.5 times faster than the 25MHz 60840
- \* Separate physically-mapped 8K instruction and data caches

For the rest of us, let's just say it's going to be very fast. Production is due to start at the beginning of 1994. Get saving!

## GAMESMASTER LIVE!

The wait is almost over! What promises to be the most spectacular computer and console games show ever is set to take place at the Birmingham NEC, on December 4th, 5th and 6th. All the major software houses will be there, previewing their new games, and there'll be a huge arcade area where you'll be able to play all the latest coin-ops for free. There'll also be the chance to play Quasar, a live action laser game, go head-to-head in a virtual reality war zone, and an opportunity to take part in a special Gamesmaster edition of the hit Channel 4 show. As if all that wasn't enough, there'll also be a huge retail area, lots of big name celebs taking part in game challenges and, best of all, the chance to meet the CU Amiga team. Or worst of all, perhaps! The show runs from 10am-6pm each day with an admission charge of £6. If you'd like more information, ring our special tickets hotline on 021 780 4133. Make sure you reserve your tickets to avoid disappointment. And remember, unlike recent London-based events, this is one show where you won't have to queue for hours on end.

## SCALA WINS OLYMPIC GOLD

Scala, the video graphics program from Scala Computer Television, won its own kind of Olympic gold during the Barcelona Olympics last summer (think hard enough and you might just remember them). The German equivalent of British Rail used Scala to inform its passengers of the standings in the medals table, with video walls in ten of their main stations around the country. Scala and the Amiga were chosen for their combination of high quality graphics with a low price tag. Scala UK can be contacted on 0920 444294.

Medaillenspiegel			
Commodore MIDECOMP			
Stand: Do., 30. Juli 1992			
1. GUS	15	7	4
2. USA	7	6	8
3. CHINA	6	9	2
4. UNGARN	5	4	1
5. SÜDKOREA	4	0	1

## CDTV CONSOLE DUE SOON

A cut-price, cut-down console-like version of the CDTV is set for launch before next Easter. Although plans for the new machine, aimed at taking on the SNES and Megadrive in the burgeoning console market, have been kept under wraps, we can exclusively reveal that the new machine will be competitively priced and come in at below £200. No specs are currently available although at least five UK software houses are currently developing titles.

## ALL-IN-ONE AUDIO/VIDEO DIGITISER

In the past, if you wanted to digitise both video and audio signals, you had to get two bits of software, another two bits of hardware, and carry out the operations completely separately. Now Microdeal have changed all that: they've combined a video digitiser with a sound sampler. Videomaster is a hardware/software package that lets you grab full-screen colour stills in any resolution up to HAM, and monochrome quarter-screen animations at up to 25 frames per second, or 30 frames in NTSC. Sound sampling is supported from within the same program.

Video animation loops can be strung together, along with sound samples, in the audio-visual sequencer. These sequences can then be played back from the sequencer direct, or saved out as autobooting files to floppy disk. Videomaster is available for the Amiga 500 and 500 Plus, priced at £69.95. Contact Microdeal on 0726 68020.

## INFOGRAMES QUILTS AMIGA

Infogrames has become the latest games publisher to pull out of the Amiga market. Or was it the Amiga that dropped Infogrames?!

## TURBO TOUCH 360°

Hornby Hobbies, best known for their authentic scaled-down locos and superlative day-glo signal boxes, are about to muscle in on the home computer market with the launch of what they claim is a 'revolutionary' joy pad. The Turbo Touch 360° plugs into the regular joystick port of the Amiga and resembles a Megadrive controller in most respects, except that the usual octagonal 8-way plate has been replaced by a touch sensitive pad. According to Hornby, 'the touch-sensitive membrane reacts to instructions as fast as users can move their fingers'. The obvious advantage is no more 'numb thumb' and the chance to use a joy pad instead of the usual joystick with Amiga games. A price has yet to be established, but it looks likely to be sub-£20.

## FIRST RED NOSE COMPUTER GAME

Ocean have teamed up with charity organisation, Comic Relief, to produce the first ever Red Nose computer game. *Sleepwalker* (previewed several months ago in these very pages) is due for release at the end of January and £5 will go to the charity for each copy sold. Not only that, but Ocean is also arranging special challenge matches around the country to raise even more cash. It's hoped that with everyone's support the game could pull in a record £500,000! To reflect the link-up with the organisation, *Sleepwalker* will feature various Comic Relief celebrities in the game, lots of Red Nose bonus stages, and even Lenny Henry has been roped in to provide some extremely weird sampled effects. Watch out for a sneak preview soon.

## THE SOFT OPTION

The entire ad team were taken outside and shot earlier this month. Why? Because the silly pillows included a Spectrum games advert in the November issue of CU Amiga instead of the more appropriate Amiga ad. Apologies to Software City, one of our oldest advertisers, for this blatant cock-up and to any of our readers who were similarly inconvenienced. For further information about the broad selection of competitively-priced games on offer from Software City, please ring their special hotline number on 0902 25304 or turn to their ad on page 31 of this month's Amiga Guide supplement.

## TOP 20 AMIGA CHARTS

At last! At long, long last *Sensible Soccer* has been pushed off the top spot and relegated to number three in the top twenty Amiga charts. Also making a surprise entry are *MiniOffice* and *AMOS Pro* from Europress. Whatever next...?!

1. Assassin (Team 17)
  2. Zool (Gremlin)
  3. Sensible Soccer (Renegade)
  4. Lotus 3 (Gremlin)
  5. Civilisation (Microprose)
  6. Putty (System 3)
  7. Monkey Island 2 (US Gold)
  8. Microprose Grand Prix (Microprose)
  9. Fire and Ice (Renegade)
  10. Fire Force (Ice)
  11. MiniOffice (Europress)
  12. Eye of the Beholder 2 (US Gold)
  13. Legends of Ishar (Silmarils)
  14. Project X (Team 17)
  15. Games Espana (Ocean)
  16. Lure of the Temptress (Virgin)
  17. AMOS Pro (Europress)
  18. Space Crusade (Gremlin)
  19. Shadow of the Beast 3 (Psygnosis)
  20. Aquatic Games (Millennium)
- All Amiga-related charts supplied by Microbyte.

## AMIGA BUDGET CHARTS

1. Dizzy Yolk Folk
2. Panza Kick Boxing
3. Captain Dynamo
4. Treasure Island Dizzy
5. James Pond
6. Super Cars 2
7. Rainbow Island
8. North & South
9. Batman the Movie
10. Falcon

# For sale: house of horror. Recently re-posessed.

It's Waxworks,™ the game that's more frightening than a picnic with Hannibal Lecter.

At the reading of your eccentric (but dead) Uncle Boris's will, you discover that your long lost twin brother Alex is still alive. There's only one snag, however. Alex is totally consumed with hate and is so evil he'd make Norman Bates blush. He's the victim of a curse put on your family by an evil gypsy.

Luckily for you, dear old Uncle Boris left you his Victorian mansion called The Waxworks and the insurmountable task of saving

your wayward brother.

You must battle flesh-eating zombies, ghastly ghouls and demons that make a Nightmare on Elm Street look like an episode of Coronation Street.

Journey through five worlds from 19th century England to Ancient Egypt. Discover spell books, weapons, even household appliances and use them in battle.

So play Waxworks,™ it's living hell on a disc.

**ACCOLADE™**  
The best in entertainment software.™

46

*It's unbelievable! We've crammed absolutely loads of great utilities and playable demos onto our two coverdisks this month! On Disk 46 there are no less than six items, all geared to help you get the most out of your Amiga. There's a 12-bit image processor in the form of Picture Box, SysInfo to give you a complete breakdown of your set-up's components and specs, Virus Checker V6.17 to keep your Amiga fit and healthy, a dozen IFF sound samples, the brilliant shoot 'em up Galaga '92, and a cheat for Team 17's Project X.*

*For Disk 47, we've squeezed in both a playable demo of the next big thing: BC Kid, and a rolling demo of the current big thing: Street Fighter II. Boot up now!*

47

# COVERDISKS

**LOADING DISK 46** Loading Disk 46 couldn't be easier. Just insert the disk in the internal drive, then power-up or reset. Alternatively, boot up from your usual Workbench disk or hard drive, insert Disk 46 and continue from there. All the programs can then be accessed from the Workbench screen. Double click on the disk icon, and then double click once again on the program folder icon of your choice. The program icon will then appear in its own window, alongside the documentation files. Double click on the program icon to load it. Additional instructions for all the items except the samples and PX Cheat are available by clicking on the doc files.

## PICTURE BOX

There are some great graphic manipulation effects contained within *Picture Box* and let's face it - if you look like this (right) you're gonna need 'em!

In a fit of gargantuan generosity, we gave a huge pile of money to a talented programmer and asked him to come up with a graphics manipulation package to rival the likes of *Pixmate* and *Butcher*. The result is *Picture Box* which appears here in its entirety for the Amiga-owning world to use and enjoy.

*Picture Box* is a 12-bit image processor. It works with both IFF and TIFF format files. It's loaded by double clicking on the *Picture Box* icon in the *Picture Box* drawer. Users of '020 or higher processors should load the '020 version instead.

Although it works on images the size of the screen, most of the time you see a scaled-down, monochrome version of your image. There are two windows. The first houses the primary image, and the other holds the secondary image. There are a number of processes available, but we'll have a look at the 'rub through' effect, just to get the hang

of it.

Once it's loaded and you see the two empty boxes on the screen, move up to the top of the screen and select 'LOAD IFF' from the PROJECT menu. From the file requester, select TUTORIAL1.IFF, and click on OK. The picture will appear in the left hand box in shades of grey, even though it's actually a colour image. Don't worry, this is just a representation of the picture.

Now go to the BUFFER menu and select COPY PRIMARY TO SECONDARY. This will swap the image over to the secondary box. Now the first box is free, select LOAD IFF from the PROJECT menu once again, and this time load the file TUTORIAL2.IFF.

Move up to the PROCESS menu, and select RUB THROUGH BLACK. Finally select RENDER HAM from the DISPLAY menu, and once the image has been processed, you'll see the first

12-bit image processing on the cheap (for free in fact!) comes your way with *Picture Box*. Choose from a whole string of weird visual effects, and save out your masterpieces for use in either Amiga packages or Apple Macintosh applications.

image superimposed on the second, with the black 'rubbed through' to reveal the background. Anything you create can be saved out as an IFF file, or a Macintosh compatible TIFF file.

You can of course, use your own images with *Picture Box* – that's the whole point. Try loading in any IFF or TIFF files you've got lying about, and mess around with the various effects such as false colour, blur, smooth, smooth 2, anti-alias, sharp, edge, edge 2, speckle, shadow, rip and relief. Some of the processes may take some time to

render on machines with a basic 68000 processor, so be patient. The progress meter is there to let you know the computer hasn't crashed – it's just thinking. For more information, refer to the DOC files in the *Picture Box* drawer.

Hopefully, this is just the first of many more such packages that are currently in production and which will be exclusively distributed through CU Amiga. These disks are not public domain, however, and anyone found trading in illegal copies will be smacked on the wrists.

**BACKING UP YOUR COVERDISKS** It's a good idea to make backup copies of your coverdisks, should you accidentally delete any of the files, contract a virus or lose the disks themselves. Making a backup is easily done from your usual Workbench screen. Click once on the coverdisk icon, and select **DUPLICATE** from the menu bar. Get yourself a write-enabled disk to copy the coverdisk onto (this doesn't need any prior formatting or erasing). Follow the prompts on-screen to go ahead with the backup process. Alternatively, use the DOSCOPY function of a dedicated copying program such as *D-Copy* or *X-Copy*.

**IF YOUR DISK WON'T LOAD** In the unlikely event of your CU Amiga coverdisks not loading, remove all cartridges and peripherals, double check that you've followed the instructions exactly, and try again. If they still won't load, pop the offending disks in an envelope and send them to: CU DISK RETURNS, PC WISE, DOWLAIS TOP BUSINESS PARK, DOWLAIS, MERTHYR TIDFIL, MID-GLAM-ORGAN, CF48 2YY. They will then test your disk and send a replacement as soon as possible. For any urgent problems though, please ring the PC Wise helpline on 0685 350505. This line can be reached between the hours of 10.30 and 12.30 weekdays. Whilst CU Amiga makes every effort to check our coverdisks for all known viruses, we can accept no responsibility for possible damage caused by viruses which may have escaped our attention.

## VIRUS CHECKER V6.17

Eradicate viruses from your system with this, the latest version of *Virus Checker*. Load it by double clicking its icon in the Virus Checker directory.

If you've used previous versions of *VC* or *Virus X*, you'll be familiar with the way it works. After loading, *Virus Checker* sits discreetly at the top of your Workbench, in the form of a short bar. The first thing it does is to check the RAM for any viruses. If it finds any, it informs you and disables them. If it comes across anything that looks suspicious, such as an abnormal coolcapture vector, it gives you the choice of setting it back to normal, or leaving it.

Next, it gets on with its other main task: checking disks. Each time you insert a disk, it checks the files and bootblock for any known viruses. As before, if it finds anything fishy, it gives you the choice of removing it or leaving it as it is. Please remember that many games have non-standard

boot blocks, so don't go wiping any programs that are perfectly okay. CU Amiga cannot be held responsible for such actions – sorry!

*Virus Checker* can't look at read-protected files. If it comes across a read-protected file, it lets you know. You can then enter CLI or SHELL, and make the file readable by entering: **PROTECT FILENAME +R [RETURN]**. Wait a few seconds, then remove the disk and re-insert it. *Virus Checker* will then be able to check the file.

To get *Virus Checker* onto your hard disk or Workbench, copy the file *Virus\_Checker* into either the root directory or the C: directory of your hard disk or Workbench disk. Edit your startup-sequence file to include a line which reads: *Virus\_Checker*. It will now be called up and run each time you load Workbench or boot from your hard drive.

For those with Version 2 Amigas or higher,

Make sure your software stays virus free with the latest version of *Virus Checker*. An essential program!

clicking on the zoom gadget brings up a preferences window. You can use this to customise the program to your own needs. Remember that the close gadget will close down the whole *Virus Checker* program, not just the preferences window. Use the zoom gadget once more to reduce it to the smaller bar form.

Refer to the DOC files for further instructions.

## SYSINFO

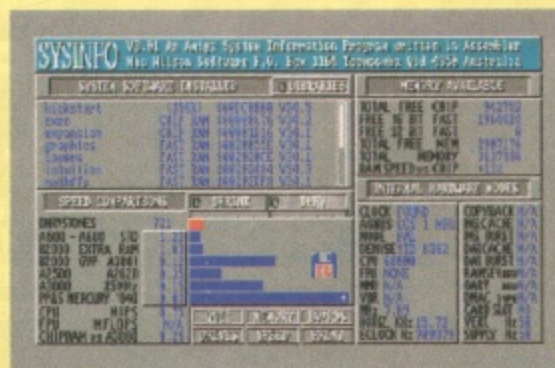

*SysInfo* could be subtitled 'All you ever wanted to know about your Amiga, but didn't.' Sure, you know whether you've got a 1.3 Kickstart or a 2.0, seeing as the machine tells you every time you boot up, and you should know how much memory you've got, but what about all those other technical details? There are so many different permutations of the Amiga now, that there's virtually no such thing as a 'standard' model.

Let's say you're eyeing up a tasty piece of software, and your gaze falls on the list of system requirements. Fast RAM, Chip RAM, processors, hard drives, speeds and chip sets can all get rather confusing after a while. Aren't computers supposed to handle all the complicated stuff?

Well here's where *SysInfo* comes in. Whether you want info on your own machine, or you're checking out a second hand Amiga, or if you're

just using someone else's computer, *SysInfo* can give you the lowdown on all things technical.

Double click on the *SysInfo* program icon, and you'll be presented with a neat screen of statistics regarding your machine. Everything is labeled, and it's all pretty much self-explanatory. If, for example, it says 'Processor: 68000', then you've got a 68000 processor installed. A number of the displays have a cycle gadget at the top of the list, which looks like a circular arrow. Clicking on this

changes the current set of statistics to an alternative set.

Using the icons located at the bottom of the screen, you can test the speed of your machine. The results of the test are then shown on a small bar graph, giving comparisons with various other set-ups. To get a more detailed view of the graph, use the expand gadget to zoom in. Any bars that are now too long to fit in the window are marked with a + symbol.

*SysInfo* is also capable of testing the speed of any drives you have connected, including CD, SCSI and IDE hard disks, as well as floppies. Click on the **DRIVES** icon, and switch to the drive you want to test with the icon at the top of the screen. Then click on the **SPEED** icon at the bottom of the screen. As the drive speed test is a write-only routine, it won't mangle your disks like some others would.

For more detailed instructions on how to use *SysInfo*, double click the DOC files in the *SysInfo* directory.

# SOUNDS

If weirdo bleeps and sci-fi sounds are your cup of tea, then check out some of these groovy samples. Not of this Earth.

Open the SOUNDS drawer to access the dozen IFF samples on the disk. You can hear them by double-clicking on their icons. If you're to get the best out of them, you should load them into any sequencer or tracker, and that includes *MED* and *OctaMED* of course. You can also use them in any other program that supports IFF samples, such as *MovieSetter*, *3D Construction Kit* or *SEUCK*. In fact, they'd be better suited to game/animation applications than used in music, as they're all sound effects rather than instrument samples.

## PROJECT X CHEAT

*Project X* just has to be one of the best all-time shoot 'em ups on the Amiga. It's also damn hard. This is frustrating because Team 17 didn't include any cheats in the game. Curses. But now, the Wakefield-based team have programmed a special

cheat exclusively for CU Amiga readers. All the instructions you need are included in the program, but just so you know what to expect, here's what to do.

1. Load the PX\_Cheat program by double-clicking its icon in the PX\_Cheat drawer.
2. Write-enable your Project X game disk.
3. Remove the CU Coverdisk 46, and replace it with your Project X game disk in DF0:.
4. Press the left mouse button, and the cheat will be written to your game disk.

To try it out, reset the machine and start the game. Once in the game, hold down ESCAPE and press the fire button. You should now have a fully upgraded arsenal, and you'll be transported to the next level. (Needs original game to run – obviously)

**ORGANISED – OOPS!** On last month's coverdisks we supplied you with the file-data program, *Organised*. Unfortunately, due to a typing error most of you were unable to save anything to disk. Sorry.

For those still struggling with it here are the correct instructions.

Boot up from Workbench and enter the shell. Then type:  
 makedir df0:filodat  
 That's it.

# GALAGA '92

Take a trip back in time with *Galaga '92*, an updated version of the classic coin-op shoot 'em up. Load it as usual by double-clicking its icon in the Galaga drawer.

It's pretty obvious how to play this progression of the *Space Invaders* theme, but if you must have some instructions, here goes:

1. Turn the volume up to max
2. Plug a joystick into port 2
3. Press fire
4. Shoot everything
5. Dodge bullets and low-flying aliens
6. Pick up bonus tokens for power-ups
7. Get blown up
8. Shout obscenities at aliens
9. Jettison computer via window

If you remember the coin-op, here's a much improved version – it's a brilliant blast.

# COVERDISKS

**LOADING COVERDISK 47** To load Coverdisk 47, just insert it in your Amiga's drive and switch on. Within seconds icons will appear for each demo. Just double click on the icon for the demo that you want to run. Moments later it will be ready to play (or watch). Please remember that your Amiga will need at least 1Mb of memory to run the *Street Fighter II* and *BC Kid* demos. If you have difficulty loading your disk please contact PC Wise at the address or telephone number given earlier.

47

It's the one they've all been waiting to see, and we've got it - a demo of *Street Fighter II* from US Gold. Plus, with a few nifty moves of his own, *BC Kid* hops, skips and headbutts his way through the Stone Age in a playable demo of Ubisoft's great new platformer. If that wasn't enough, we also have a slice of Bill's *Tomato Game*, a truly off-the-wall platform puzzler.

# BILL'S TOMATO GAME

The purpose of this intriguing puzzler from Psygnosis is simple, but bizarre. Guide your tomato through each of the five screens, from left to right, using an array of fans, trampolines, jack-in-the-boxes, and so on. Position these items by clicking on them in the display panel at the bottom of the screen, then moving them to the desired place on the screen and clicking again. If the

object doesn't stay where you want, it's either too close to another item (you can't have fans hitting each other's rotors, now can you?), or because some places are just out of bounds. On the first level you only have fans at your disposal – the other items come later. To see the full range of hardware available, click on the arrows beside the display panel.

The idea behind *Bill's Tomato Game* is straightforward: get your juicy red fruit from one side of the screen to the other without letting it get splattered. Unfortunately, this is a lot harder than it at first seems. There are five levels included in our demo, and if you can complete all of them then you're just showing off!

When you're happy with the arrangement of your tools (ahem!), click on the green button (below the red one), at the bottom centre of the screen. Boing! Your tomato's spring-loaded platform will fire, the fans will spin, and, hopefully, your ripe red friend will be blown and bounced across the chasm. If you fail and he hits the ground, or a fan, or a flame (or anything else tomato-unfriendly) his salad days will be well and truly over – splat!

If you look at the numbers counting down in the bottom right of the screen you'll see that you're also working against the clock, so don't hang about. We think this is one of the more inventive puzzlers we've seen of late, but we'll let you make up your own mind if you think it's worth buying.

One of the best new puzzle games of recent months, *Bill's Tomato Game* will have you tearing your hair out in frustration.

# STREET FIGHTER II

The totally excellent coin-op comes to the Amiga for the very first time and here you can have a sneaky peak at this special rolling demo from Creative Materials. Good, eh?!

They're mean, they're ruthless, and they're now destined to appear on an Amiga near you this Christmas. Probably the most eagerly awaited game of the century, or this year at least, is finally about to make an appearance on everyone's favourite home computer. Will it seriously rival the SNES version, and how close can it come to emulating the brilliant coin-op? Well, this is your chance to gain a first impression in our special rolling demo.

Cutting up rough on the street (or, in this case, an airbase) are Ryu and Chun Li. Karate-master Ryu, an exponent of the dragon punch and cyclone kick, slugs it out with Chun Li, the only female streetfighter in US Gold's forthcoming conversion. Ungentlemanly conduct on the part of Ryu? Not at all: Chun Li's as hard as nails and, with her spinning bird kick and hundred foot kick, is a tough opponent to beat.

There are two rounds for you to watch, as the two characters show off their deadly array of special kicks and moves. The final version of the game is going through rigorous playtesting as I write this and should be in your shops very, very soon. Watch out for a full review next issue!

If you've got an accelerated machine, you can even watch the pair fly through their routines at an extra quick pace.

Will Ryu prove to be more than a handful for Chun Li, or will the mighty Chun Li inflict some serious damage on the karate master? Find out in this amazing demo.

# BC KID

Here's your chance to nut the opposition with a combination of lethal head butts in the amazing, the brilliant, the totally addictive *BC Kid*. Winner of a CU Superstar!

Ever wondered why the dinosaurs died out? Forget meteors and ice ages, it was probably due to acute migraine after encountering the Neanderthal nipper you'll meet here. It is your job to steer the toddling tearaway star of Ubisoft's new platformer safely through his volcano-strewn world. For an in-depth review of this masterpiece, look no further than page 54 of this month's issue. But if you can't wait that long, here's how to control the kid:

Using a joystick, guide the diminutive hard-nut hero to the right, through the scrolling landscape. He's not alone, however, and the strange creatures that scurry towards the kid need to be headbutted out of the way: press the fire button to see him get tough. The hatchet-wielding weirdoes are tougher than the green critters, and take more pounding. Try getting rid of them

with an airborne attack: push the joystick up to see the kid jump, press fire, and watch him fall headfirst onto his enemies. Make sure you judge the distance between them correctly or – crunch – he'll hit the ground with a head-splitting thud. Don't let the monsters touch the kid while he's unprepared or – ouch – he'll know all about it.

The kid gets three lives, and the three hearts in the top left of the screen show his state of health for the current one – the more the red fades, the worse he's doing. When overpowered, the prehistoric nasties will dispense happy faces – which means extra points for our hero if he can pick them up.

Plenty of strange shrubs grow in this primordial world, of course. If the kid jumps onto the yellow ones he can use them as trampolines to bounce high up and grab point-conferring pieces of fruit above. Headbutt the red ones and pieces of fruit, malevolent, jumping monsters, or meaty kebabs may emerge. If the kid eats two of the meaty kebabs (or a giant size one) he will become invulnerable for a short period, as indicated by a green force field. In this state he can steam straight through his enemies. Occasionally red hearts may appear from the butted plants – these help restore the Cretaceous crusader's health.

There are three stages for *BC Kid* to complete on CU's demo: 'Practice', 'Highlands', and 'Kick Head'. In 'Highlands', volatile volcanoes burst from the ground, blocking the Jurassic junior's path. Mind that lava! If he's confronted by cliff faces, make him jump immediately in front of them and see him bite the rock. Keep pushing the joystick up to make him climb higher – if you don't he'll slide down. When he gets to the top, move the joystick to the side again so he can be on his way. We won't reveal how the final stage ends, but keep the name in mind when looking for the way out!

Exactly how many awards  
will it take before

# THE BEST DEALS, THE LATEST AMIGA TECHNOLOGY

## AMIGA 600 WILD, WEIRD, & WICKED PACK

**ADD A ZOO!**  
PACK  
FOR ONLY  
£20 EXTRA!  
(see details below)

Comprising the Amiga 600 computer with  
1 Mb RAM, 3.5 inch 1 Mb floppy disk drive  
PLUS mouse, manuals, Workbench 2.0,  
all connections to your TV set,  
and the following FREE software:

- MICROPROSE GRAND PRIX
- SILLY PUTTY
- PUSHOVER
- DELUXE PAINT III

**all for £319.95 inc.**

..... and you can add even more games or accessories  
with our exclusive added value packs detailed  
lower down this page.....

**NEW!**

**ADD A ZOO!**  
PACK  
FOR ONLY  
£20 EXTRA!  
(see details below)

## AMIGA 1200

THE NEXT GENERATION AMIGA

- True 32 bit computer with a 68020 processor running at a blistering 14Mhz, 5 x faster than previous Amiga's!
- 2Mb of 32 bit memory expandable via smart card slot
- New AA graphics chips give maximum 262,000 colours on screen from a palette of 16.9 million!
- Styled similar to Amiga 600, but includes numeric keypad
- Compatibility mode for existing Amiga programs, whilst new releases will feature Amiga 1200 enhancements
- Includes new Workbench 3.0 operating system

**Amiga 1200, only £369.95 inc.**

## AMIGA 600 EPIC & LANGUAGE LAB PACK

Comprising the Amiga 600 computer with  
1 Mb RAM, 20 Mb hard disk drive,  
1 Mb 3.5 inch floppy disk drive,  
PLUS mouse, manuals, Workbench 2.0,  
all connections to your TV set  
and the following free software:

- EPIC ● MYTH ● ROME
- TRIVIAL PURSUIT (in 3 languages!)
- DELUXE PAINT III (painting package)
- AMIGA TEXT (Word Processor)
- FIVE LANGUAGE DICTIONARY

**ADD A ZOO!**  
PACK  
FOR ONLY  
£20 EXTRA!  
(see details below)

**all for £449.95 inc.**

..... and you can add more value, either games or  
accessories, with our packs detailed below .....

## AMIGA 1500 PACK

Comprising the Amiga 1500 computer with  
separate system unit and detachable keyboard,  
1Mb RAM and two 3.5 inch disk drives,  
nine internal expansion slots,  
Workbench 2.0 and Kickstart 2.0,  
and the following free software:

- THE WORKS Platinum Edition  
(Word Processor, Spreadsheet, Database)
- HOME ACCOUNTS ● DELUXE PAINT III
- ELF ● TOKI ● PUZZNIC ● GET THE  
MOST OUT OF YOUR AMIGA BOOK

**all for £539.95 inc.**

## AMIGA 3000

Comprising the Amiga 3000 computer with  
separate system unit and detachable  
keyboard, fast 25Mhz processor speed,  
2Mb RAM and one 3.5 inch disk drive,  
latest version 2.0 machines,  
available with the following hard drives:

**52Mb hard drive £1299.95**

**105Mb hard drive £1479.95**

**1935 SVGA monitor £259.95**

**1960 multisync monitor £419.95**

## AMIGA 600 DELUXE PAINT & GAME PACK

Complete Amiga 600 computer, with 1 Mb RAM, 3.5 disk  
drive, one game ( normally Lemmings ) and Deluxe Paint III. **£269.95 inc.**

## AMIGA 500+ CARTOON CLASSICS PACK

**ADD A ZOO!**  
PACK  
FOR ONLY  
£20 EXTRA!  
(see details below)

Comprising the Amiga 500 plus computer  
with 1 Mb RAM, 18 key numeric keypad  
1 Mb 3.5 inch floppy disk drive,  
PLUS mouse, manuals, Workbench 2.0,  
all connections to your TV set  
and the following free software:

- LEMMINGS
- THE SIMPSONS
- CAPTAIN PLANET
- DELUXE PAINT III

**all for £269.95 inc.**

..... and you can add even more games or accessories  
with our exclusive added value packs detailed below.....

## AMIGA 4000 MULTI-MEDIA SYSTEM

New awesome multi-media platform featuring  
68040 32 bit processor running at 25Mhz,  
new AA chipset with 16.9 million colours,  
6Mb RAM and high density 3.5 inch disk drive,  
latest Workbench 3.0 operating system

**A4000 40Mb HD**

**£1999.95**

**A4000 120Mb HD**

**£2199.95**

## CDTV ENTRY PACK

CDTV player complete with  
remote controller, plays audio CD's,  
CD audio plus graphics disks, and  
Amiga interactive titles, comes complete  
with the following software:

- WELCOME DISK
- HUTCHINSONS ENCYCLOPAEDIA
- LEMMINGS  
(the award winning game)

**all for £369.95 inc.**

## AMIGA CDTV PACK

### MULTI-MEDIA SYSTEM

Combination of the CDTV  
and an Amiga compatible computer  
including CDTV player,  
black Amiga keyboard, infra-red mouse,  
3.5 inch black Amiga disk drive,  
Workbench disks and remote controller

**all for £469.95 inc.**

**.....ADD MORE GAMES, MEMORY OR ACCESSORIES WITH OUR VALUE ADDED PACKS!**

### ZOO! PACK

- Includes:
- ZOO! - 97% rated AMIGA COMPUTING
  - STRIKER - 94% rated CU AMIGA
  - PINBALL DREAMS - 94% rated AUI
  - TRANWRITE - premier word processor  
...worth over £127 in total!

**ONLY £20 EXTRA!**

### AWARD WINNERS PACK

- Includes four award winning games:
- KICK OFF 2 ● PIPEMANIA
  - POPULOUS ● SPACE ACE
- ...worth over £122 in total!

**ONLY £10 EXTRA!**

### PHOTON PAINT

(THE 4096 colour  
painting program)

**+  
GFA BASIC**  
(essential for writing  
your own programs)

**ONLY £10  
EXTRA!**

### ACCESSORIES PACK

Essential extra's including,  
Zipstick Super Pro joystick,  
10 blank 3.5 inch disks,  
lockable 40 capacity disk box,  
high quality mouse mat  
and dust cover

**ONLY £20 EXTRA!**

### EXTRA 1Mb RAM

for  
A500  
**ADD £30**  
or A600  
**ADD £35**

# shape shifting on the amiga

**Digital effects are all around us, on television, in the cinema, and now on the Amiga. Come with CU Amiga as we take you on a studio tour of the very latest in state of the art computer graphics.**

## **VISUAL EFFECTS**

Ripples, Twirls and Morphs may sound more like confectionery and plasticine cartoon characters than the latest computer jargon, but Amiga owners now have a new meaning for them – digital visual effects. The ultra-pure look of computer graphics have become so clichéd on today's television that emphasis has switched to processing real-world images. It's no longer acceptable to simply overlay real-world and computer generations with a gen-lock or chromakey, now they must interact.

Let's say that you have a hi-res, beautifully sharp digitised picture displayed on your Amiga. Now imagine that instead of glass, the TV screen

is actually a thin sheet of rubber and you can bend and stretch the image in any way you like. You can pinch it and cause faces to shrink inwards, pull it and create grotesque mutants. You can alter the screen so it becomes a pool of liquid with the picture projected onto it from behind, and then drop imaginary objects into it to cause ripples to spread outwards. And the most impressive effect of all: causing a highly detailed image to shift and alter itself to take on an entirely new appearance – a morph.

Guess what? There are now at least three big-name software-based visual effects packages available on the Amiga, with most claiming 'cine-

matic quality' output – some have already been used in professional television productions.

## **WHY 24-BIT?**

As you are probably sick of hearing by now, 24-bit graphics, and the 16 million plus colours they provide, are all the bits you'll ever need to display a picture. By using a byte for each of the red, green and blue components of a pixel, the range of available colours is actually greater than that which can be detected by the human eye. By comparison, the now old hat Amiga HAM mode provides an image with a paltry 12-bit resolution, or 4096 different colours.

Image processing and young children don't mix - it's all too easy to select the warp functions of *CineMorph* with disastrous results.

It's only fair that you warp yourself once in a while. My glasses aren't this strong, really.

However, this doesn't mean that a 24-bit graphics board is an essential purchase, for it is entirely possible that the processed image might never be seen in the full glory of its million-plus colours. Internally, the software stores and updates the image with 24-bit accuracy, thus ensuring that any jiggery-pokery with the mathematical formulae needed to generate all the effects is used to best effect, but the finished result may only be displayed on a HAM screen.

The downside, as you have also probably guessed, comes about because storing graphics in 24-bits uses up a whole lot of memory. Thankfully, if your Bank Manager isn't a big fan of your Amiga and really doesn't understand your deep need to upgrade to Workstation status, you can still experiment with your favourite paint program: as long as it's *Deluxe Paint Version 4*, that is.

## THE REALMS OF THE POSSIBLE

The effects which you can now achieve on any Amiga used to require custom-built digital and analogue computers costing many thousands of pounds. Machines such as the Quantel Mirage worked by storing the image in an internal frame-buffer, before unleashing the custom chipper necessary to alter the image.

Some digital video effects (DVEs) still require

Two brushes were created, and given to *Deluxe Paint's* morph function. Notice how *D-Paint* does not offer true morphing, rather a form of blending.

special hardware, especially if they are to occur in real time. For this reason the VideoToasters of this world are not about to be made redundant by some clever software - producing a 50 frame morphing animation with any of the software packages reviewed here is far from being an instantaneous affair. There are advantages to using software: it's a lot cheaper than hardware, it's a lot more flexible (BlackBelt seem to produce an update to *ImageMaster* every two weeks) and it can also produce significantly better results.

All the new software packages we'll be looking at provide extensive support for 'Morphing', that is, the changing of one image into another over time. Morphing is the current fashionable video effect, and once you know what it looks like you can't watch a single commercial break without seeing an example.

Both BlackBelt's *ImageMaster* and ASDG's *MorphPlus* also provide many other effects, including swirl and ripple effects, not to mention the many other ways of providing cruel distortions. These effects can be used on the smallest IFF brush to the largest 24-bit image that your memory can store, and results will be as dramatic as you could possibly want.

## MORPHING

When the evil Terminator grows out of the floor in the film of the same name, you're seeing a polymorphic sequence, as an image transforms itself into a new shape. Morphing software geometrically alters images, moving a pixel here, altering a colour there to create a smooth transition between two pictures. The software is helped by a human user, who has placed 'control points' at important parts of the image. These points indicate common or similar points in both the first and last image - the computer does some in-betweening on them to calculate the intervening frames.

## WHEN IS A MORPH NOT A MORPH?

When it's blend, as anyone who has had the pleasure of using *Deluxe Paint 4* and its morph option will tell you. *D-Paint's* morph is hidden away in the brush menu, and it works by generating a series of animbrushes from between the two alternate brushes - which may be as big as

**HARDWARE** If you plan on exploring the world of visual effects beyond *D-Paint*, you are going to have to invest in some pretty expensive hardware. The bad news is that quality costs - and if you want to morph a hi-res, interlaced 24-bit image of a chequered floor into an eight foot liquid metal robot killing machine from the future, you're talking a whole lot of quality.

At the very, very least you will need 3Mb of Ram, which is well over the 1Mb standard sported by most Amiga's. I found that both *MorphPlus* and *ImageMaster* needed 6Mb before they would start playing properly, and even *CineMorph* would need close to this amount if high quality 24-bit images were involved. This extra memory should preferably be 32-bit wide and used in tandem with an Amiga fed with a Motorola 68020, '30, '40 and FPU (floating point unit). Of course, the brand spanking new A1200 and A4000 come with 68020s, 68040s and 32-bit ram as standard. Likewise, the A3000 comes with an 68030 (and not an '020 as mentioned last month, sorry). The rest of us will need to rush out, credit cards trembling with anticipation, in search of an accelerator card. When it comes to 24-bit graphics the Amiga can be acting purely as a 'number-cruncher' - sometimes the results won't even be rendered on an Amiga screen. Needless to say, the speed of the Amiga is paramount. The difference an accelerator makes for a small, one-off visual trick is negligible, but for an animated sequence or even a single large 24-bit image, the faster chip makes the difference between a project that gets done and one that doesn't.

Hard disks may be a luxury for some, but for digital visual effects artists they are essential. Image files take up a lot of space: so much in fact that high-capacity optical storage devices are needed for larger projects. Even quite tame animations will no longer fit onto a single standard or high density floppy disk - so you'll soon be crying out for a utility such as *Quarterback* to split files over several floppies.

The quality of the finished images depends on the hardware used to display them, and that in turn depends on how much you want to spend. A bare Amiga can still produce excellent results using an over-scanning interlaced HAM mode and the new HAM-8 and 256 colour modes supplied by the new AGA chipset should be even better, if not yet proved. External hardware such as as Digital Creation's DCTV or BlackBelt's HAM-E can provide stunning results, but for absolute A1 quality you'll need a pure 24-bit display board such as an (quite cheap) AVideo or (quite dear) GVP IV-24. The broadcast quality images produced by the latter can then be stored on video-tape, video disk, or injected directly into a processional editing suite.

the screen. The trouble with this morph is that it's stupid and it doesn't know which parts of the image are important and which parts aren't. You can't really blame *D-Paint* for this - after all, a morph function is a bit of a free gift when part of an art package.

Nevertheless, *D-Paint* is a perfect way to start playing with morphing, even if all the morphs end up looking like a simple blend. Take a look at the example 'evolution' images (left) generated with *D-Paint*. The human seems to melt away, and is replaced with the monkey as in some tragic transporter accident straight out of *Star Trek*. Compare it with a version generated with a dedicated morphing package and you should be able to see how this new and improved version subtly alters to become, rather than replace, the new image. The difference is even more striking when viewed as an animation. Apologies for the human face used by the way, but try convincing someone to have their face morphed into a monkey and chances are you'll end up doing it to yourself, too

Like buses, morphing packages seem to arrive in groups. There are now three intelligent morphing packages available for the Amiga: *ImageMaster* from BlackBelt, *MorphPlus* from ASDG and GVP's *CineMorph*. We'll assume that you are already conversant with *Electronic Art's Deluxe Paint*, as everyone who has bought an Amiga recently will have a copy, and those who haven't upgraded to Version four should have.

# MORE THAN JUST A FLIGHT SIM

AV-8B Harrier Assault heralds the arrival of a new breed of flight and military simulations.

A multi-role strategic, tactical and operational scenario gives the player maximum control of the military campaign whilst allowing the option of 'Gung Ho' dogfighting in one of the world's most exciting and versatile fighter aircraft.

**"EXTREMELY FAST,  
DELECTABLY SMOOTH.  
ONE OF THE  
BEST FLIGHT SIMS  
I HAVE EVER PLAYED."  
— PC FORMAT —**

# Those packages in full

A little work with *ImageMaster* and *AdPro* produces this splendid example of image processing a work in television advertising.

## IMAGEMASTER

*ImageMaster* was fully reviewed back in the October issue of CU, although since then it has been updated (several times). By a short whisker it was the first commercially available package to offer proper morphing, but is by no means showing any form of aging. BlackBelt's update policy means that the version of the software you are using has probably been superseded, so registering is extremely important. The downside is that most of the manual is now on disk instead of paper, so until a new manual is made available you'll need to print your own.

In the very latest version of *ImageMaster* we could get hold of – 9.20 – the morphing feature has been improved to include definable 'arcs', as well as the normal control points. The arcs will enable parts of the images to move in curves rather than in straight lines and add an organic feel to morphs. The familiar dual image display has been retained, but an 'onion skin' option is also available.

Controlling the morph is simply a matter of plonking down some points in the first image, and altering their positions in the second. BlackBelt recommend you add about 50 points which will stop elements of the images simply 'ghosting' onto the screen.

When producing a sequence for use as an animation, the ability to control the speed at which the morph occurs can provide a perfect finishing touch. For example, you may wish most of the changes to occur at the beginning of the

**MORPHING FOR PROFIT** Morphing is happening all around us. The ultra-expensive film, *Terminator II*, made extensive use of computer effects, including famous sequences when the bad-guy Terminator changes shape to disguise himself. Although only on-screen for seconds, these frames took many, many hours of processing on expensive Quantel video hardware.

The same people who brought those effects to the cinema have also turned their attention to television advertising – the notable example being the recent ad for Volvo cars in which a car morphs into a galloping horse: therefore presumably demonstrating how exciting Volvos really are! Other advertisements feature shampoo bottles changing shape, hairstyles magically altering on the heads of the owners and just about anything that can look snappy and appealing in less than 30 seconds.

Music videos have always been amongst the first media forms to explore anything new, and if you didn't see Godley and Creme's 'Cry' video when it first came out a few years ago, try and catch Michael Jackson's when it is reshowed on MTV.

sequence, with more subtle effects towards the latter frames.

*ImageMaster*'s morphing procedure itself is not particularly slow, and the results can be either be rendered in Amiga format or stored as 24-bit images. Motion morphs can also be created, so within your animation, an object can move across the screen, transforming as it goes. Impressive stuff, which we'll probably be seeing in demos.

It would do *ImageMaster* a great injustice to go on without mentioning its many image processing features.

The special effects offered by *ImageMaster* are extensive, with my favourite still being the ability to add a little twinkle of light to a digitised face. *ImageMaster* provides extensive ARexx support, through which the animation possibilities are realised.

*ImageMaster* now fully supports the AGA, and my goodness are we going to be hearing a lot more about that new HAM-8 mode. By extending the cunning trickery used by HAM, the Amiga now has a pseudo-18-bit graphics mode as standard, blowing one heck of a raspberry at the most super of Super-VGA PC cards. Most people will be unable to tell 18-bit from 24-bit graphics, especially when the image is animated. Be prepared for some gob-smacking animations.

As a fully featured image processing package, *ImageMaster* has more features than any normal person could possibly want. With each new version comes new possibilities, and when it reaches version 10 I'm sure it will be the best program available.

## MORPHPLUS

It seems that practically every month we seem to find some excuse to mention ASDG's *Art Department Professional* (*AdPro*). This could be due, to some extent, because *AdPro* is ubiquitous when graphics and the Amiga are used – it's just sooooo powerful.

When reviewing *ImageMaster*, I had the unfortunate task of having to choose between it

When *ImageMaster* is given 100 control points and two similar images, it starts to produce amazing morphs like these. Other images needed.

In *ImageMaster* each image is peppered with control points and left to their own devices. A point on the left image has a matching point on the right. Alter their positions and you can control how the morph moves.

This sequence was created with *MorphPlus*. The first image was 24-bit colour, the last a 16 shade monochrome image. *MorphPlus* works with both images, and produces an impressive set of images, even more so when animated.

Morph Anim Op @ 1992 By ASDG Incorporated; MAY NOT BE RENTED, LENT OR LEASED

1	Src		Dst
23	Cnt	9	Brt
Start X	Y	Delta X	Y
End X	Y	Group	(no vector)

The main MorphPlus morphing screen provides an 'onion skin' effect to enable accurate positioning of control points. This is the only way I can get my brother to shut his mouth.

**AREXX** Whilst most morphing operations will be carried out automatically, it can't be denied that a good working knowledge of AREXX programming is all but essential for the generation of other really good Amiga special effects. As an example, let's look at ASDG's *MorphPlus* and its 'Ripple' command.

The normal Ripple function works on a single image, as can be seen in the picture above. A special preview image is drawn in the centre of the screen, and the mouse is then used to place the centre of the ripple. The various characteristics of the ripple are fed into the requester to the right. A click on the Accept gadget, a short delay as numbers are crunched, and voila: your image has a whopping great wave slap bang in the middle of it.

To create an animation you could repeat this process, moving the ripple slightly each time. This would be a very tedious and error-prone process, and is exactly the sort of thing that AREXX was invented for. With a relatively simple AREXX script – perhaps even adapted from one of the examples supplied with *MorphPlus* – you can set everything up, nip down the laundrette, do your smalls and come home to a 50 frame animation.

AREXX scripts can automate every feature of practically every function, and what's more they can do it with a degree of mathematical precision. Although not renowned for its floating point capabilities, AREXX is still capable of providing the image functions with some hard-to-guess values – *MorphPlus* can create an animation of your 24-bit image tumbling and spinning backwards into the screen in precisely calculated perspective.

and *AdPro*. At the time, *ImageMaster* won by a whisker because of the special effects it came with as standard. This time the jury will have to remain out (or down the pub more likely), as *MorphPlus* provides *AdPro* with all the missing goodies, as well as a darn good morphing feature to boot.

*MorphPlus* can be used either as a stand-alone package – in which case it pops up with a strangely familiar screen – or as an extension to *AdPro*. When used by itself, *MorphPlus* works in exactly the same way as *AdPro* fans will know and love – all the functions are available from the relief shaded gadgets, with miniature requester boxes opening when a choice is available. Very slick, and very easy to use. If you already own *AdPro*, the extra features of *MorphPlus* can simply be included in your Loaders, Savers and Operators drawers to provide a seamless upgrade.

With either option, the image is only rendered when the 'Execute' button on the bottom right is clicked, in the meantime all operations are carried out on the internal 24-bit colour or 8-bit Mono framestore.

When an advanced DVE option such as 'rotate' is chosen, a new window opens and a quick monochrome version of the image is displayed allowing the user to accurately choose

the centre and ferocity of the effect. The only drawback of this approach is that every effect seems to have a slightly different way of entering data, and needs a little getting used to. The advantages of having such full control over the image more than make up for any inconvenience caused.

One function which is especially good fun is called 'warp'. Using warp entails tacking down fixed points on the image and providing small movement markers called vectors on others. Once processed, the new image can display a subtle alerting of objects or grotesque mutations – whatever you desire!

Warping is essentially a single-frame morph effect, and indeed the warp function is needed by a separate program – called 'Morph' – which forms a separate part of *MorphPlus*. Through the wonders of AREXX, Morph integrates with *MorphPlus* (or *AdPro*, confused yet?) to make use of the loading, saving and warping procedures. The use of AREXX is one reason why having Workbench 2 is essential.

When Morph is first run, you'll need to alter the default colours before you can see what is happening. Then you'll need to refer to the manual, for this is not user-friendliness at its best. Unlike other *AdPro*/*MorphPlus* features, most of the options appear in pull-down menus.

This image is a perfect example of a bad morph. Because I hadn't set the control points well enough, parts of the image are ghosted or badly warped. Although a nice effect in itself, with more time the image would look a lot better.

Once you know your way around, you find that probably the nicest of Morph's features is the 'onion skin' depth effect. When looking through the various possible frames of your morph, you'll need to decide where and when to put control points. Morph will provide you with slider bar control over the start and end images – the more you slide it, the more the final image becomes dominant. It's a very fast and effective editing technique, although I think I prefer *ImageMaster's* method of showing two images side by side.

Several occurrences seem to indicate to me that *MorphPlus* has still not been 100% completed. Little things such as the ANIM loader occasionally going 'puff' and the appearance of error messages referring to lines of C source code would lead me to believe that an update should be coming soon. In the meantime, I still feel confident in using *MorphPlus*, even if having the manual on the desk beside me is a prime requisite. When you start to use *MorphPlus* properly, hidden features such as the possibility of 'over and under shooting' the destination image to add more flowing interesting morphs can get you so engrossed that you'll start an entire new project just to try them out.

The results produced by *MorphPlus* were excellent, as they should be when connected via

ARexx to such a powerful program as *AdPro*. If you are prepared to put in a little effort, *MorphPlus* is a strong contender for the essential piece of image processing software. If you already have *AdPro*, it should be obligatory.

## CINEMORPH

GVP, better known for their accelerators and hard drives, are slowly but surely moving into the world of software. The reason for their diversification is a simple one – when you start creating state-of-the-art hardware, you're going to need some software to run on it.

*CineMorph* is unique in that it only does morphing – it provides no other DVEs and it makes no promises to the contrary. As a result its price tag is a good deal less than the other packages, and it also seems to be a lot smoother and quicker in operation. The authors have not had to attempt the integration of morphing features into an existing package, and the use of a clean slate has certainly aided ease of use. Extensive use is made of Intuition, to provide an excellent user interface – if you can resize a Workbench window you can use *CineMorph*.

In another break with tradition, *CineMorph* uses a linked matrix of points to overlay the images, with the lines between the points used to describe the motion of the points in that region. The linking lines may be treated either as normal straight lines or as more flexible 'spline' curves, which can add a smoother feel to the morph with a small time penalty. More rows or columns may be added, for example, around the mouth and eyes of a face where more detail is required.

Three types of project are possible with *Cinemorph*: Single, Dual or Sequenced morphs. The single morph is identical in concept to the warp feature

These colour images show what *CineMorph* is capable of when used properly. The first and last screens contain the key grid positions, and the middle frame has been artificially generated.

**JARGON EXPLAINED** ARexx: The 'interprocess communication language' which is supplied with every new Amiga. It's a language a bit like BASIC, but a lot slower. Its advantage is that it can talk with most compatible programs, swapping data and providing macro functions for tedious and repeating operations. ARexx is the best thing since sliced bread, no matter if you pronounce it 'ay-rex-x' or 'ay-rex'.

DVE: Digital Video Effect – when you are watching *Top of the Pops* (well, someone still does) and the groups names whiz onto the screen in a shower of pixels, you're looking at a Digital Video Effect. DVEs pop-up all the time – whether as a ripple down the centre of the screen to introduce a dream sequence on *Wayne's World*, or the way a company logo zooms onto the screen in an advertisement.

Framestore: A framestore is a large amount of computer memory which contains the information needed to produce an image. A framestore may use 24-bits for each element of its display (pixel) to provide 16 million different colours, and have a resolution such as 768 pixels across by 580 down. In this example, over 1Mb of ram would be needed just to store the image. Once the picture is in a frame buffer, all sorts of DVEs may be performed on it – which may require more memory in order to run.

When your Amiga is displaying a picture, some part of its memory is being used as a framestore. Hardware within the Amiga scans this memory 50 times a second, and creates a signal which produces a display on a television or monitor. The memory used as a framestore must be chip memory (shown as 'graphics memory' on Workbench 2), as it must be available for access by the custom chips.

Custom 24-bit graphics boards will normally contain their own memory to store the image, and as the memory needed will have to be very fast and expensive VRam (video ram), this explains why the boards cost so much. Some cards, such as DCTV, will make use of the Amiga's ram by processing the normal video output.

Morph: Morphing is a relatively new digital effect. An image or scene smoothly alters shape and colour to become a totally new image. Note that this is not a simple dissolve or blend: each part of the original image has actually altered its colour and moved to a new position. A good morph will look as though the first image has simply grown into the second.

To achieve a good morph, the user must supply a list of control points. Each point in the original image has a counterpart in the secondary, and how they move in the intervening frames controls the overall look of the effect. The more points the better, although this can slow processing down on some packages.

JPEG: This is probably the best image compression system ever developed. It stands for 'Joint Photographic Expert Group', is pronounced J-PEG and works very well indeed. By using the fact that there are some details in a picture which you simply won't miss if left out, a JPEG image can consume a fraction of the storage space of a conventional file. Almost essential for professional work, and the huge amount of data needed.

This rather realistic morph was achieved using ImageMaster. As you can see, the change is made that much more effective by using start and end pictures that are roughly the same shot.

TABLE 1 Software	Publisher	Price	Min Hardware/Software required
D-Paint	EA	£	512K, Workbench 1.3 and up
CineMorph	GVP	£99	2.5Mb, Wb1.3 up, Hard drive rec.
MorphPlus	ASDG	£	4Mb, Wb2, Hard drive essential
ImageMaster	BlackBelt	£	3Mb, Wb1.3 up, Hard drive rec.

TABLE 2 Software	Morph	JPEG Load/Save	Arexx	Anim	Single/Dual/Sequence
D-Paint	Yes	No/No	No	Yes	No/Yes/No
CineMorph	Yes	Yes/No	No	Yes	Yes/Yes/Yes
MorphPlus	Yes	Yes/Yes	Yes	Yes	Yes/Yes/Yes
ImageMaster	Yes	Yes/Yes	Yes	Yes	Yes/Yes/Yes

of *MorphPlus*, with dual morphing providing the transformation between two images.

Static morphs may look amazing by themselves, but for truly music-video quality animations you'll need to use the Sequence option. When you do, you'll need to supply both the 'morpher' and 'morphee' images as a regularly numbered sequence of stills. It might also be necessary to specify new 'key frames' for the control matrix instead of letting the software in-between its own, but this is a painless – if time consuming – operation. The more time you spend fine-tuning the grid, the better the finished morph.

If you wish you can combine several morphs into a sequence, for example Face 'a' can morph into Face 'b', which then morphs into Face 'c' and so on. Comprehensive grouping features simplify the process.

In use, *CineMorph* presents little in the way of problems. The manual need be only read through once before you have almost completely mastered the software, and you can therefore spend most of your time adjusting the grids and

TABLE 3 Software	Other Effects
D-Paint	None
CineMorph	None
MorphPlus	Perspective, ripple, sphere, twirl, refract, rotate, warp.
ImageMaster	As above, plus asterise, posterize, and many more.

TABLE 4 Software	Documentation	Ease of Use	Flexibility	Overall
D-Paint	80%	85%	70%	78%
CineMorph	87%	80%	80%	82%
MorphPlus	90%	79%	94%	87%
ImageMaster	78%	90%	97%	88%

Software	Available from
CineMorph	Silica Systems, tel: 081 309 1111
MorphPlus	Silica Systems, tel: 081 309 1111
ImageMaster	Amiga Centre Scotland, tel: 089 687 583

rendering those morphs. Getting used to the matrix method takes a little more time than the control points and vectors of other packages, but seems to produce identical results. Like the other packages, images may be rendered into Amiga modes (which include DCTV and HAM-E modes – hopefully AGA modes will be available soon) or pure 24-bit colour files. Animation files can be created directly, which can save a heck of a lot of time whilst *Deluxe Paint* laboriously loads each frame. Being the simplest package to use, *CineMorph* comes highly recommended for those new to the world of image manipulation and morphing.

## CONCLUSION

There are as many digital effects as there are ways of painting a pictures. The Amiga has been blessed with many software tools, which used correctly, produce some spectacular results.

Looking at the software packages available you may feel that little or no artistic ability is required – it's all a matter of selecting various menu options and getting the computer to spit out the results.

Unfortunately, this isn't true, as being to judge the most effective ways of performing an effect can take a long time master. Those who will create the best results will be those with the wildest imaginations. Are you ready to try?

**MAKING THE BEST OF A MORPH** When creating a morph, it is important to spend as much time as possible getting everything right before the calculations start. An extra five minutes at the start could prevent a wasted six hour render.

For best results the start and end image should have some parts vaguely in-common. When morphing two faces, the eyes and mouth are where your attention should be concentrated. Make sure that the eyes occur as close to the same part of the screen – say two thirds of the way down – as possible. It's here that you should apply most of the 'control points'.

Try not to use confusing backgrounds, as they will distract from the central image. If necessary cut out the important parts of the image, and place on a pure-colour background. You can always mask in a new background when the morphing has been completed.

All packages will allow control over the morphing images – use this option to create a trial run, perhaps using quarter-screen Mono images. Make use of the 'control curve' if possible. When morphing faces, adjust the curve to change hair quickly, and facial features slowly.

**PHOENIX**

Sales 0532-311932

Our friendly, highly trained sales team will ensure that your order is dealt with efficiently and with the minimum of fuss.

At the time of placing your order we will advise you of anticipated delivery time and answer any other queries you may have regarding your purchase. All major credit cards accepted.

Technical Support

The Phoenix product helpline ensures that all our customers benefit from the highest level of after sales technical support.

We also offer advice to help you in choosing exactly the right product for your requirements thus eliminating the possibility of an unwanted or unnecessary purchase.

Despatch 0532-310796

Once you have made the decision to purchase from Phoenix your order will be dispatched promptly and without fuss.

Using one of the countries leading courier services ensures that your goods arrive on time, intact and in the same condition they left our stock.

# A Warm Welcome to Christmas '92

Welcome to our three page Christmas-Special which has all the products you need to make this a "Happy Amiga Christmas!"

Page one is devoted to 'Options', packs which are designed to take the headache out of your choice this Christmas. All year we have been gathering regular feedback from our customers on what they think are the essential items to be found in a pack. From this information we have assembled what we and the Amiga buying public believe to be the ultimate in packs at unquestionably the best prices.

**Make 'Options' your only option this Christmas!**

**James Millard**  
Managing Director

## OPTION 1

### ARCADE ACTION PACK

This Pack, built around the A600 1Mb machine, will provide you with everything you need to create your own in house' all-action arcade environment. Exploit the Amiga as the ultimate games machine!!!

**NORMAL R.R.P. inc VAT..... £604.85**  
**PHOENIX OPTION 1 £539.99**

**WHAT YOU GET!**

- A600 1Mb
- Phillips Monitor 8833 MkII
- 10 Capacity Disk Box
- 10 Phoenix Bulk Disks with Labels
- Two Joysticks (fully microswitched)
- Mouse-Joystick Switch
- Phoenix Stereo Hi-Fi Sound Speakers
- ZOO! Software Pack (10 High Quality Games inc. ZOO!, striker)
- 8mm Mouse Mat

## OPTION 2

### HOME OFFICE

This pack is based round the A600 HD giving you all the advantages of an electronic office environment in the comfort of your own home. Alongside the A600 HD, Phoenix also provide you with a top selling 9 PIN dot matrix colour printer, a highly rated software package - rated 84% in Amiga Format - our own Phoenix Deluxe drive, and a full range of top quality accessories, making day to day household management easy!!

**NORMAL R.R.P. inc VAT..... £986.85**  
**PHOENIX OPTION 2 £939.99**

**WHAT YOU GET!**

- A600 1Mb (20Mb HD)
- Phillips Monitor 8833 MkII
- Star LC100 9 PIN Colour Printer
- 3.5" External Drive
- PA 601 RAM Expansion
- Europress "Mini Office"
- 10 TDK 3.5" Disks
- A4 Copy Holder
- Anti-Glare screen
- 500 sheets of Paper
- 8m Mouse Mat

## OPTION 3

### FAMILY PACK

Based on Commodore's Epic+Language pack, Option 3 gives the whole family maximum use of the Amiga. Phoenix have added to the top quality software titles already in the pack with a choice of fun school titles for the children and Monkey Island 2. (Amiga Format Gold winner). They complete what is an unbeatable software based pack. Whether it's word processing, learning, home accounts or just good old game playing, the FAMILY PACK is all you need.

**NORMAL R.R.P. inc VAT..... £1006.86**  
**PHOENIX OPTION 3 £929.99**

**WHAT YOU GET!**

- A600 1Mb
- Epic+Language pack (20Mb Hard Drive)
- Phillips Monitor 8833 MkII
- Star LC100 9 PIN Colour Printer

## OPTION 4

### CHRISTMAS CRACKER

"Unbelievable", "Crazy", are just some of the quotes from the industry regarding the demise of the A500+. Destined never to be sold again the A500+ was superseded by the A600 range. However, Phoenix have secured one of the largest stocks in the UK of the Cartoon Classics Pack and offer you the very last chance to purchase this legendary machine!!

**PHOENIX OPTION 4 A 500+ Cartoon Classics 2Mb..... £279.99**  
**£314.99**

**WHAT YOU GET!**

- A500+
- 1Mb of RAM expandable to 10Mb
- Workbench 2.04
- Real-Time Battery Backed Clock
- Full Comprehensive Manual Set
- Mouse
- TV Modulator
- External PSU
- Lemmings
- Captain Planet
- The Simpsons
- Deluxe Paint III

- ALL PRODUCTS are full UK spec.
- ALL PACKS supplied with full connecting cables for immediate operation.
- FREE 'Getting Started' technical guide.
- FREE RETURN TO PHOENIX pick-up on all faulty hardware within 30 days of purchase.
- FREE UK DELIVERY- on all 'Options' packs

WHY  
OPTIONS

- FREE DUST COVERS for Computer, printer and monitor when purchasing an options pack.
- EXCLUSIVE technical helpline number.
- THE KNOWLEDGE that you are purchasing from one of the premier mail order companies in Europe.

If you wish to upgrade any major item of hardware in the 'Option Pack', simply tell us at the time of ordering and we will just charge you the difference in price between the two products. Easy!

SPECIAL CHRISTMAS OPENING TIMES  
Mon-Sat 9.00-7.30

PHOENIX

# SHADOWWORLD

On the three planets of the Magna 6 system you have set up a modest research facility. Nothing too extreme. Just a few personnel, a Galaxy-class space station and the most powerful weapons development facility the Universe has ever known.

But now you have a problem. The regular daily contact schedule on the sub-space station network with Magna 6 has gone a bit quiet. Well, silent actually. In fact, you have had no word from the facility in 2 months.

You need to send trusted yet expendable men in to get answers and carry out a discreet, efficient operation.

Pick your four man team and "Deep Sleep", the cryogenic computer will keep them in suspended animation until they arrive at Magna 6, an interstellar journey of almost 17 months. And then wait for their report. But what possible explanation could there be for trouble on Magna 6 - there is no power in the universe capable of disturbing the facility. The known universe, that is.

# SCREENSCENE

Welcome to the Screen Scene. If you're thinking about forking out for an Amiga game, don't! Or at least, not until you've read our comprehensive reviews and previews of all the latest games.

## 32 SYNDICATE

Blade Runner meets *Sim City* in this futuristic strategy game. We go behind the scenes at Bullfrog.

## 35 LEMMINGS 2

They're back. Those stupid furry creatures are about to return to Amigas everywhere. God help us.

## 36 TRANSARCTICA

Fancy yourself as a rebel-rousing train driver? CU takes a peek at this new strategy game from Silmarils.

## 39 FIRST IMPRESSIONS

With the Christmas rush almost upon us, we take a look at some of the latest titles to make a break for the softshop shelves.

## 43 ALIEN 3

Mark Patterson faces the most dangerous predator in the Universe. And survives to tell the tale.

## 46 SENSIBLE SOCCER V1.1

Those Sensible Boys have done it again. Not content with releasing the best soccer sim of the year, they've now produced an updated version of everyone's favourite kickabout.

## 49 NIGEL MANSELL'S WORLD CHAMPIONSHIP

Fresh from his success at becoming world champ, our Nige takes time off to endorse Gremlin's latest racing game.

## 53 AMBERSTAR

More irrational fantasy role-playing in a land far, far away. Worth putting on your best loin-cloth for...

## 54 BC KID

A prehistoric platformer with a skin-head as its star? Here's an unexpected hit from French label, Ubisoft.

## 56 JOE AND MAC: CAVEMAN NINJA

Yet more prehistoric goings-on, this time featuring that character best-loved of chinese chop-sockys - a Neanderthal ninja.

## 59 SPOILS OF WAR

Discover and colonise far-off lands in a race to be the richest player around. Kick butt, too!

## 59 PREMIER MANAGER

Take control of a Vauxhall Conference team and lead them to victory at the top of the Premier League in Gremlin's latest management sim.

## 59 RAMPARTS

Strategy and arcade action come together in Domark's conversion of the popular coin-op.

## 59 CAESAR

Another *Sim City* clone hits the streets. Establish and rule a small Roman province in a bid to take control of the Holy Roman Empire.

## 62 CAMPAIGN

The Second World War was a dangerous time to live in. Make it safer for peace lovers by climbing inside your tank and blowing the enemy to bits.

## 65 NO SECOND PRIZE

Realistic motorbike racing returns to your Amiga. Feel the wind in your face, as you power round the world's top international circuits.

## 69 TINY SKWEEKS

Guide loveable alien furballs through a series of dangerous mazes. Why are these things always so thick that they need our help?

## 69 PALADIN II

Don a suit of elven plate mail and do battle with various evil demons from beyond the grave. Or stay at home and have a cup of tea, the choice is yours.

## 69 NO GREATER GLORY

Become the President, before the States were united, and lead your army to victory in the latest strategy game from SSI.

## 69 ZYCONIX

If you loved *Tetris*, and who didn't, you'll like this addictive puzzler from Accolade Europe. Let your brain take the strain...

## 70 LEGEND OF KYRANDIA

Here's a brilliant graphic adventure from the team that brought you *Eye of the Beholder II*.

## 75 SMALL TIPS

If it's cheats you're after, then look no further, as we've got stacks to keep you playing into the wee small hours.

## 77 TROLL'S HEAD

All the latest info and tips for weary adventurers. Gather round as the Inn Keeper imparts his wisdom.

## 80 PTW: SHADOW OF THE BEAST III

Psygnosis' arcade strategy hit is taken apart and reconstituted in a form more easily handled by frustrated gamers.

## 91 WING COMMANDER

The first A1200 game is here. CU Amiga brings you an exclusive review of the first in a new generation of Amiga-based entertainment. Can they get any faster than this game?

CU AMIGA  
SUPER STAR

93% and a game's worth a Superstar. We hardly throw them around, but if a game gets one it'll be completely outstanding.

A CU Screen Star is for games scoring 85%-92%. If a game gets one of these, it'll be of lasting quality.

CU AMIGA  
SCREENSTAR

The development screen clearly show the the amount of time and effort that has been put into the game. Every object, whether animated or not, has had designers spending hours on the look and feel of it.

And some more development screens showing traffic lights, hand guns, medikits, dust carts, bins on fire, police cars, automatic doors, neon signs, tanks, billboards, windows hit by bullets, trees, scanners, fire engines with flashing lights, water cannons, ambulances, mail boxes, explosions, and so on.

This early preproduction artwork could be subject to change, but it's impressive nonetheless.

# SYND

**A dark vision of the 21st century. Global corporations sumers kept in line with hallucinogenic biochips. Are game for cyberpunks? Rik Haynes scans through the**

**BLADE RUNNER REVISITED?** After unashamedly trashing the competition with the release of *Populous*, what could leading software developer Bullfrog do next? Easy, have a game of Monopoly for fun and inspiration! That's how great ideas can spark into place from nowhere.

Essentially, *Syndicate* is an unusual mixture of business sim and shoot 'em up. It's another 'godsim' giving the player heaps of freedom to push the program in many directions. However, players don't take the role of a digital deity this time around. Instead, they're the ambitious figureheads of small companies intent on breaking through to the big time by any means at their disposal.

The look and feel of the game has obviously been influenced by cult sci-fi movies, such as *Blade Runner*, *Escape From New York*, *Aliens* and *Rollerball*. A compelling mixture of gleaming high-tech and shocking violence, this is also one of the few games to successfully capture the sinister mood of those award-winning cyberpunk novels from William Gibson, etc. One could say that *Syndicate* is something like a cross between *Blade Runner* and *Sim City*. Not that we're going to see the tears of a clone. The relatively petty enforcement powers of city officials in the Maxis release have been replaced by shotgun-wielding psychopaths working for ruthless industrial cartels.

**PIZZA = INSPIRATION** The original concept for this colossal project, the biggest yet from Bullfrog, came from a brief planning meeting while the team gleefully tucked into their favourite deep pan recipes at the local Pizza Hut. According to spokesman Peter Molyneux, thinking of a name for a game is the hardest thing to get right. Incidental features like game-play and graphics slot together only after a catchy title has been chosen. There have been some truly bizarre names banded around his busy office in the past. For instance, *Powermonger* was originally called *Three Men and His Boat*. The new game started life simply as 'Bob'.

Perhaps this had something to do with the out-of-control megalomania antics of Robert Maxwell? I'm sure Uncle Bob would have eagerly approved of the very hostile takeovers employed during a typical session of *Syndicate*.

'Most company bosses are quite boring people who spend most of their day on the golf course,' Molyneux laughs. 'We've put a whole new twist into it. You run *Syndicate* by being vicious and mean.'

**WHAT A GAS BAG!** From the comfort of a neo zeppelin floating above the urban sprawl, players can influence employees by injecting a potent

**'I read the first three chapters of William Gibson's *Neuromancer*, but it all went a bit above my head.'**  
**Peter Molyneux**

# SYNDICATE

gone crazy with ultimate power and gullible con-  
Bullfrog and Electronic Arts creating the first video  
storyboards and sprites to find some proof...

chemical cocktail into their brains to alter the intelligence, aggression and perception of each individual. Of course, there's a tradeoff when tampering with personalities in such a dangerous way. Increasing the dosage of adrenalin will make these hapless fools more excitable and if there's not enough intelligence enhancer being pumped in they'll act like braindead zombies! 'You've got to balance it just right,' agrees Molyneux. 'If you give them too much intelligence when they're in a dangerous situation, they will just run off and hide.'

He adds: 'They require more of these drugs to remain in a stable condition. If the limits are exceeded they're likely to go completely mad and do untold damage to other workers and the surrounding environment.'

**BUSINESS ETHICS** Once this tricky technique has been sorted, it's time to get down to business. Industrial espionage, surveillance, bribery, sabotage, kidnapping, smuggling and killing the opposition are probably the best ways to get ahead in the cut and thrust community of 2093. However, savage security forces and rival firms will try to stop any upstarts from doing this successfully. Starting from scratch, the idea is to

gradually build an empire by taking control of every major metropolis around the world. If they've managed to accumulate a bit of cash, players can buy tasty items like bionic limbs, fake

**'You can hire a whole  
army of graphic artists  
and stuff as much artwork  
as you like, but that won't  
necessarily make it a  
brilliant game.'**

**Peter Molyneux**

IDs and extra weapons for their hit terrorist squads.

Sounds too zany to be true, eh? Molyneux confirms he will always sacrifice authenticity for the sake of making a better game. 'I want players to feel that they can do absolutely anything,' he maintains, 'but having a good game is the most important thing

to have at the end of the day. We're asking people to play our games for hours on end. We've got to get it right!'

## MINDBENDO

There's an opportunity to recruit more personnel to your cause through the use of a persuadotron chip gun. If one of your workers armed with this short range weapon shoots an unsuspecting victim they will immediately turn into another slave. Trouble is, they're pretty stupid and tend to die rather quickly. It's like an invasion of the mind snatchers!

There are over 30,000 frames of sprite animation in *Syndicate*. Bullfrog uses a combination of packages on an IBM-PC to produce all the graphics.

This prototype city from *Syndicate*, currently being used to test out new programming routines and theories, is actually based upon a real district of Tokyo.

The bulk of *Syndicate*'s programming work has been skillfully handled by Sean Cooper, though he nearly gave it all up to become a male model after appearing in *The Clothes Show* on BBC1.

*Syndicate*'s visuals have been uplifted by a filmlike intro designed out of house. This impressive sequence utilises the 64-colour mode of your Amiga and the flashiest 3D graphic techniques.

Up to eight players are able to compete over a modem link. They can even communicate via the videophone kiosks found in the game.

Keep your eyes peeled on those large screen TVs for the *Populous 6* advert!

Molyneux reckons the music and sound effects in *Syndicate* will be reminiscent of the *Blade Runner* soundtrack by Vangelis. Remember him?

# BETTER GRAPHICS. BETTER SOUND. BETTER SOFTWARE. BETTER GET ONE.

Better take note. One CD inserted into the new Amiga CDTV stores the equivalent of up to 700 floppy discs. That's 550 megabytes of memory or 250,000 A4 pages of text.

CDTV also gives you access to over 3,000 Amiga titles and over 100 CDTV discs, covering everything from arcade

quality games to education. And CDTV can be used as a regular audio

CD player when connected to your stereo. The Amiga

CDTV Computer Pack, complete with qwerty keyboard, disc drive, mouse and infra red remote control can be yours for only £499.99 including our free Public Domain Collection disc. The Amiga CDTV Player Pack comes in even lower at only £399.99. All of which proves one thing.

When it comes to the ultimate in home entertainment, you won't find anything better than the Amiga CDTV.

## AMIGA CDTV

**THE WORLD'S MOST INTERACTIVE INTERACTIVE HOME ENTERTAINMENT SYSTEM**

CDTV IS AVAILABLE AT SELECTED STORES OF ALLDERS, CALCULUS, COLORVISION, COMET, DIXONS, TECNO, TEMPO, VIRTUAL REALITY AND ALL LEADING INDEPENDENT COMPUTER SPECIALISTS, INCLUDING NASCH. PRICES CORRECT AT TIME OF GOING TO PRESS 5/10/92.

A trip to the seaside is bound to turn into a disaster for those stupid little creatures. Good job they brought some balloons.

It's possible to swing from a chain and release the Lemmings' grip at just the right second to send them through the air.

Although *Lemmings 2* is more arcade-based than the original game, there will still be a number of devious puzzles to test you.

# LEMMINGS 2

The control system is basically the same as the original *Lemmings*, and this runs along the bottom of the screen.

The 12 tribes are scattered around a huge map. By clicking on a certain area, you are then granted access to that tribe.

As well as the usual diggers, there are now also fillers. These guys are handy if you dig yourself into a hole and cannot get out.

**What's small, stupid and has green hair? No, it's not Dan Slingsby; he only fulfills two of those criteria.**

**SECONDS OUT** We all know that *Street Fighter 2* is set to clean up when it's released, no matter how crap it eventually turns out to be. So that might explain why Psygnosis have delayed the launch of *Lemmings 2* until next February. I'm not saying they've got cold feet, but who wants to play second fiddle to some second-rate coin-op conversion?

So what's different? For starters, the development team behind the game, DMA Design, have opted for a much more arcade-orientated style of play. There's still the puzzle elements in there, but the pace of the game's been beefed up and there are lots of new skills to learn. Apparently, there are now 12 Lemming tribes and each tribe has roughly eight skills at their disposal. These range from ice skating, swimming and diving to skills as bizarre as morris dancing, snake-charming and caber-tossing.

Initial impressions suggest that nothing much has changed. The Lemmings are still the mop-topped minuscule sprites we've all come to love and the basic layout and presentation remains unchanged. All the skills are displayed at the bottom of the screen where they can be chosen by the click of the mouse button. However, each tribe has their own specific levels and these follow a particular theme. For instance, there's a Circus tribe and their environment is decked out in gaudy colours, big tops and merry-go-rounds. Other tribes include Classical Lemmings which uses lots of Grecian architecture for the backdrop and Athletic Lemmings is set against various sporting themes.

**GERONIMO** Some of the skills are quite bizarre. One option lets you turn a Lemming into a human cannonball – once you've chosen this option, the little chap will light a cannon and then run around to the front, hop in and be fired off up into the air! As he flies across the screen a great sampled shriek of 'Geronimo' can be heard. There are still the usual diggers and climbers on offer, but only on selected levels. Blockers, meanwhile, have been replaced with busking Lemmings who can't resist strumming a tune on their air guitar thus making all the other Lemmings within earshot stop what they're doing and dance.

In all, DMA are aiming to squeeze in more than 80 levels with plenty of sampled speech, four-way scrolling (not eight as the first batch of ads claimed!), and more than 60 different skills. None of the music has been put in yet, but it looks likely that the 'How much is that doggie' ditties of the first two games will be given a miss and some alterna-

tive tunes put in their place, each one relevant to the themed level.

**SUICIDE IS PAINLESS** Sadly, the Lemmings' suicidal tendencies have been brought to an end as these new tribes are virtually indestructible beasts. No matter how far they fall, it's all but impossible to do them any harm. Another potential cock-up is the introduction of a skill level. It's possible to complete each stage by getting just one Lemming through the door, for which you're rewarded with a bronze talisman. As the number of Lemmings rises so does the value of the talisman, right up to a gold standard. A bit pointless, really, but there you go. There's still a lot of work to do on the game. Only half the tribes have been implemented so far and then there's all the playtesting and bug fixing to wade through. All things considered, I was pleasantly surprised with the new game. If DMA put in everything that they've got planned, then I'm sure they'll have another blockbuster on their hands.

## WALKER

Another project that DMA Design are currently working on is *Walker*, a game first mentioned in this magazine almost two years ago! It's an out-and-out blaster set over five levels. The first part of each level puts you in control of a 'Walker', a cross between the huge mechanical transports in *Return of the Jedi* and ED209 in *Robocop* with two huge gun turrets mounted underneath the rotating head. It's your job to then guide the Walker across the screen, blasting assorted tanks, helicopters and troops to smithereens. At present the control system requires the player to use both a joystick and mouse in tandem. The mouse is used to control the on-screen targeting sight and the joystick used to dictate the machine's movements. The control method might change in the final version. Once you've blown away all the copters, mashed all the troops under your steel feet, etc. it's then onto a platform section wherein you leave the confines of the Walker and leap about *Prince of Persia*-style collecting extra ammo and other goodies. It's all looking incredibly swanky and due for release by Psygnosis in the new year.

The walker is being attacked by suicidal bomb-throwing soldiers dangling from hang gliders.

The turret rotation animation for the walker is really something special.

# TRANSARCTICA

Strategy games are about as interesting as train spotting, so that doesn't help explain why Silmarils has combined the two. Dan 'Loco' Slingsby lets off some steam.

**JOIN THE UNION** After their brilliant wind-powered strategy game, *Stormaster*, French publishers, Silmarils, have turned their attention to a coal-fired one. This time around you get to command a gigantic steam-powered train (about the size of the QE2!) in a futuristic fantasy that has you pitted against the Viking Union, a huge corporation who seemingly own everything and everybody.

It's the far distant future and, as a result of a scientific experiment gone horribly wrong, the Earth is in the grip of a harsh nuclear winter (i.e. it's a bit nippy outside and has been for the last millennium or so). Understandably, the human race has found all this a trifle annoying as most of the land is now covered in a thick layer of ice, and holidays in Benidorm or Ibiza are (thankfully) a thing of the past. Much of humanity has congregated in huge 'Station Towns', old railway junctions which have become the focal point for the remnants of civilisation. Trade between these towns is kept open by huge juggernaut trains which ply their trade across the world.

The game's been in development for more than a year now, with the in-house team constantly coming up with new ideas and innovations. What started out as a post-nuclear adventure has grown into an in-depth strategy game based around a gigantic train. Playing the part of a rebel leader, it's up to you to lead an alliance of like-minded individuals against the Viking Union, and find a way to restore the planet to its natural state. Most of the action centres around the Transarctica, the huge loco under your command. It's up to the player to locate scarce coal supplies, buy and install spare parts, build up a selection of wagons, keep the train's residents fed and clothed, cope with weather hazards, keep the engines ticking over and, above all else, make lots of loot.

## WHO ARE THESE SILMARILS PEOPLE ANYWAY?

Founded in November 1987 by two brothers, Louis Marie and Andre Rocques, Silmarils have to be one of the best kept secrets in the software biz. A steady stream of top-notch product in recent years has gone seemingly unnoticed by the Amiga-buying public even though many of their games have received near-ecstatic reviews.

It wasn't always like that, though. Hands up who can remember the incredibly dreadful *Manhattan Dealer*, which had you terminating drug dealers in the Big Apple, or *Wind Surf Willy*, a windsurfing sim which allowed you to select wind speeds, board types and sail material amongst other options. Then there was the fiendishly difficult *Boston Bomb Club*, which involved guiding a bomb around a series of interconnecting passageways with various obstacles impeding its progress, and *Metal Mutant*, wherein robotic contestants beat the ruddy hell out of each other.

Recent releases such as *Stormaster* and *Ishar: Legend of the Fortress* have done much to bolster the company's reputation, but a regular place in the top ten still eludes them. Maybe *Transarctica* can finally make the break though.

As you can see, although the original sketches are fairly detailed, when they are transferred to the Amiga a lot more detail is included in the finished design. Some sketches may end up being dumped, even at this late stage of the production process.

## DESIGN OF THE TIMESE

The graphics are already outstanding. The ones here use 32-colours although Silmarils is looking into the possibility of using more and taking advantage of the graphic capabilities of the new generation A1200/A4000.

A lot of work has gone into the overall design of Transarctica with more than 10 staff working on the game at any one time. Detailed sketches were first drawn up on paper and, when approved, artists would then transfer the grid-based sketches onto similar grids in *D-Paint*. From there, the finer detail would be added and any last minute changes in design implemented.

There's so much already included in the game that it's difficult to imagine how much more the game's designer and coders can cram in. But they've still got a number of ideas they want to squeeze in before the game's released. For instance, as well as the strategy element, they want to implement an optional arcade sequence which occurs each time an enemy train is encountered. This will take the form of open warfare with each train spewing out a deadly assortment of missiles and cannons at each other, as well as dispatching commando units to mine tracks and bridges.

It's also hoped to include an Oracle for much needed advice and an on-board library where an update can be given on the course of events. As well as the strategy elements, the game will also feature a bit of adventuring as our heroic train driver has to visit a number of locations in his efforts to track down vital clues and information.

## WAGON WHEELS!

As well as the strategic elements of out-thinking and out-flanking the enemy, there's also the task of slowly building up your train into a state-of-the-art fighting machine. In this

Here's just two of the many different kinds of wagons that can be hooked onto the main engine of the train.

respect, it's a bit like *Sim City*, as the pieces fit together like Leggo to form one overall entity. There are war wagons, prison wagons, storage wagons, living wagons... in fact, you name it and there'll probably be a wagon for it! All this takes money, though, so just as citizens were taxed for funds in *Sim City*, so too are the many train dwellers. The trading of valuable minerals, ores and food stuffs will also help generate much needed cash which helps to slowly expand your train into something approaching the size of a Megablock in *Judge Dredd*.

It's too early to tell whether such a mishmash of gaming styles will gel together or not, but we'll bring you a review as soon as we can. *Transarctica* is due for release in January 1993.

## YOU DON'T HAVE TO BE LOUD TO BE COLOURFUL.

at your local games store now!

As we're squeezed for space this issue, only a couple of games have made it into our prized First Imps preview spot, but what a dandy looking pair they are.

# first impressions

## DR WHO - DALEK ATTACK ALTERNATIVE SOFTWARE

The longest running sci-fi TV programme in the world might have ceased production, but Doctor Who is set to live on courtesy of Alternative Software. They've snapped up the rights to the BBC's cult show and have come up with a platform-based shoot 'em up. Although there have been a couple of games based on the Doctor before (most memorably MicroPower's *Doctor Who and the Minds of Terror* on the C64), this will be the first to include both the Doctor and the Daleks pitted against each other.

The plot involves the Doctor in a battle royale against arch-nemesis Davros as the Dalek leader attempts to destroy the Earth's ozone layer with his army of upturned dustbins. Before good can defeat evil the Doctor must first combat numerous other characters from the show. Set over five levels, the player will be able to choose from three of the original Doctors: Tom Baker (the guy with the scarf), Patrick Troughton (the guy with the

flute) and Sylvester McCoy (the guy with no acting talent whatsoever). It's also possible to chose two assistants, these being Ace or a UNIT soldier. K-9, on the other hand, follows you around constantly.

The game is currently going through its final bug-testing stages. As well as seeking the opinions of games magazines, Alternative have also sought the advice of the Dr Who Appreciation Society. More than 750 members recently had the game previewed to them and, according to Alternative's David Watkins, 'the response was quite amazing, totally surpassing all our expectations'. But then he would say that, wouldn't he?!

The demo we've seen has a very

smart intro with the Tardis appearing out of nowhere with the signature tune playing as the credits roll. The first level is all but complete and involves the Doctor in a mad dash around the streets of London picking up Doctor Who health icons and power-ups while avoiding Ogrons and Daleks. The sprites are a bit on the small side and the collision detection isn't all it could be, but these faults may well be corrected in the final version.

## DESERT STRIKE ELECTRONIC ARTS

When Electronic Arts released *Desert Strike* on the Megadrive last April, it shot to the top of the charts. Now, the strategic shoot 'em up is being converted to the Amiga and, by all accounts, is looking just as good as the original blast.

In case you're not aware, the Megadrive shoot 'em up involved piloting an AH-64 Apache helicopter in an attempt to overthrow General Kilbaba, a mad tyrant who has invaded a small Arab emirate. Sounds familiar? Of course it does, and in the States the game received much flak from military and parental organisations for its blatant Gulf War scenario.

But whatever the convoluted plot, there's no denying that *Desert Strike* was a quality blast and the Amiga conversion is shaping up nicely. The in-house conversion is being handled by Gary Roberts, the man responsible for the earlier Megadrive-to-Amiga conversion of *John Madden Football*.

The Apache 'copter under your control is an incredibly versatile war machine and

can carry an awesome assortment of tactical weapons with more to pick up at special drop points in the

game. The various missions involve taking out SCUD missile launchers, rescuing allied agents and destroying military installations. Using an isometric three-quarter top-down perspective, there will also be numerous submissions that need to be completed. Of course, it's not going to be one way traffic, so keep a look out for SAM missile sites and enemy gun-ships on patrol.

Most of the 27 missions

have been finished, with just the sound effects and game testing to be completed, so we should see a full review next issue, as well as a playable demo on the disk.

# Actual screen. Not simulated.

If you want to take a closer look at the new Wordworth  
call 0395 270273, or write to  
Digita, FREEPOST, Exmouth EX8 2YZ ENGLAND

Actually, you're looking at the new  
Digita® Wordworth® version 2.

It's the revolutionary Intellifont®  
technology which produces on-screen  
fonts at sizes from 3 to 800 points!

Wordworth comes with 17 genuine  
Agfa® Compugraphic fonts, which are  
just about the best quality around.

Best of all, Wordworth prints silky  
smooth fonts at the highest possible  
resolution of your printer.

Which means, in human terms,  
unbeatable print quality. Just click the  
icon on the tool bar and in seconds  
you'll be printing jagged-free letters and  
graphics.

But, there's more to new Digita  
Wordworth than just pretty fonts...

New features include • columns •  
tool bar • indexing • table of contents •  
endnotes • improved mailmerge and  
file support • bookmarks • text sorting

• improved search and replace •  
hotlinks. In fact, there's over 100 new  
features and improvements.

So, if you want to print the sharpest  
possible letters around, trade up now  
from any Amiga word processor for just  
£59. But hurry, this is for a limited  
period only.

Digita Wordworth, what you see is  
what you get—the power to present.

# ALIEN<sup>3</sup>

What's eight feet tall, has acid for blood and needle sharp teeth? That's right it's ... Mark Patterson

## IN SPACE NO ONE CAN HEAR YOU SCREAM

Some people seem to attract loonies, others act as a magnet for viruses, Ellen Ripley seems to draw acid-spitting slaughter-hungry aliens. As the main character in the Alien films, she's outlived the crew of her starship, a platoon of colonial marines, and, in the most recent movie, an entire prison colony.

The game starts in the nicest area of the penitentiary, although even then it resembles the kind of kebab shop a starving man would pass by. The aliens who are now residing in the colony have been very busy. Using their ability to secrete a noxious, tougher-than-rope resin, they've glued all the prisoners to various bits of the colony. Being a good egg, and not wanting the aliens to breed anymore, Ripley takes it upon her self to free them and slaughter every xenomorph that gets in her way.

If you've seen the film (which I thought wasn't too bad), you'll probably have sussed that the game's plot differs somewhat. Unlike the film, where Ripley was armed with nothing more than a dangerous haircut, here she's really kitted-out for action. Her arsenal is made up of hand

grenades, a flame thrower and a pulse rifle (complete with grenade launcher). Each weapon has a limited supply of ammo, which dwindles very quickly when you're faced with aliens that take several hits to kill.

She also has a motion tracker which pin-points the position of any prisoner or alien in the nearby area, although it only has a limited power supply and batteries have to be found to charge it up. The problem with this, though, is that by the time it picks up an alien, it's already making a determined leap at your throat. However, because there are so many prisoners on the later levels, it becomes an essential bit of kit.

## THIS TIME IT'S WAR

There are 14 levels in total, all of which are set against the clock. If you run out of time you get to witness the aliens bursting out of the remaining prisoners, which is almost worth deliberately running the clock down to see. Obviously any sane person would do a runner rather than take on an entire alien race single-handed. What prevents Ripley from following suit is that the last doorway doesn't open until the final prisoner is rescued.

Ripley only has a limited amount of energy, which is depleted by contact with the aliens and long falls. She can also be a bit of a danger to herself. There are several storage rooms in the colony which contain

## GUNNING FOR ALIENS

It's one thing having plenty of weapons, it's another knowing how to use them. While each one is perfectly capable of blowing an alien into very small bits, they also have specific uses.

### FLAMETHROWER

Very powerful. It's put to best use when burning alien eggs and face huggers.

### PULSE RIFLE

The best all-round weapon. It gets through ammo like nobody's business, though, so use sparingly. Ripley can point it at the ground when she runs, which is useful as that's where many of the aliens burst out from.

### GRENADE LAUNCHER

This is very effective indeed, capable of destroying aliens before they come on screen, but it has a slow rate of fire.

### HAND GRENADES

These are best employed in the ventilation shafts as they bounce quite a bit when they hit a surface and take a while to detonate.

Luckily for Ripley she can shoot in diagonals, so there might just be enough time to take out that alien. Of course, running away might be an equally good idea!

It pays to throw a grenade or two to deal with out of the way aliens.

Ripley can fire down ladders as well as drop grenades to clear the way.

The motion tracker is better for tracking down prisoners, as the aliens are usually leaping out at you by the time it picks them up.

Face huggers are very quick. Your best bet is to use the flame thrower to burn them as they leap. Otherwise Ripley might just get that facial she never wanted.

cans of fuel that explode when hit by a stray bullet or grenade.

Moving around the levels can be quite tricky, even if you avoid most of the hazards. There are loads of moving platforms which provide the only link between gantries, so Ripley's formidable leaping abilities are put to the test. Security doors also pose a hazard. Most can be opened by operating the controls at the side, which is handy as they can be closed behind you to lock out aliens. The alternative is to select the grenade launcher and blow it away.

### TOO TOUGH TO BEAT?

Apart from the hazards with slaver jaws, there are plenty of other things to be avoided. Some levels have slippery ramps, and stepping on one of those leads to a very long drop. There are also spiked pits and gigantic fans which spell instant death. Plenty of long-drops have been placed under tricky jumps to liven things up further.

Naturally the prisoners are usually stuck in out of the way locations, and

### MEGADRIVE MEETS AMIGA

Alien 3 is already a big success on the Megadrive and rightly so. It's nice to see that Probe have converted the game almost exactly onto the Amiga, right down to the same level maps. The only difference is that it's slightly slower than its console counter-part, although that doesn't effect the gameplay.

The Amiga version of the game can also make use of the three-button Megadrive control pad. Because the Amiga isn't really built for this type of controller, only two buttons work so you still have to use the space-bar to change weapons, but it makes it a lot easier to play.

half the challenge of rescuing them is finding them in the first place. Often you need to retrace your steps to find a passage or doorway you might have missed, which can be a little hair-raising with the clock ticking down. The prisoners are very heavily guarded after the tenth level. Egg-sacks are placed right next to them, and they release a face-hugger as soon as you approach.

There's one level that differs from

### ALIENS, ALIENS EVERYWHERE

The Aliens are a little like ants, albeit eight-foot ants with a hatred off all things warm-blooded. All of them have several physical traits in common – they bleed acid, they have two sets of jaws, they like damp locations and are constantly dripping with some kind of slime.

In Alien 3 they take a new form, well the single alien in the film does. It now appears that an alien inherits some of the genes of the creature it bursts out of, in this case a dog. Whereas the aliens in the previous movies have been actor shaped, this one has a tail and scrabbles around on all fours (although there are no embarrassing incidents with lamp-posts).

Although Ripley buys it at the end of the film, rumour abounds that plots have been drawn up for the next three movies in the series. There's scope for a Predator versus Aliens film, which was alluded to in Predator 2, where there's an Alien's skull in the big guy's trophy room.

The eggs that the face huggers leap from can be destroyed from a distance.

The exits open when all the prisoners are freed.

There's a bonus for any unused ammo.

Forget about the prisoners, the aim of this level is to survive. There are more prisoners than ever and a very limited supply of ammo.

The aliens can leap out of the ground or drop from the ceiling. You never know where the next one will be.

all this though. The mayhem stage is devoid of prisoners but full to bursting point with aliens and facehuggers. The object isn't so much to find the way out as to survive. This sets you up with almost no ammo for the next level, which makes things tougher still.

One of the trickier features of the early levels are the networks of ventilation shafts. You can't tell where the passages lead to and aliens have developed a nasty habit of dropping down vertical shafts at high speed. The hand grenades come in very useful as they can be dropped down tunnels to clear the way before you crawl into the unknown.

### THE BITCH IS BACK

Every few levels the scene changes and Ripley finds herself locked in a room with a queen Alien. Apart from being significantly larger than her offspring, she can leap huge distances and spit acid. It takes a ridiculous amount of ammo to finish her off, so you have to make each shot count. Like the normal levels this is time-limited, so you can't wait for her to jump into your sights.

Face huggers start to appear on the later levels. These burst out of their eggs and make a spirited attempt at grabbing Ripley's face. If they succeed they'll slowly drain her energy. Only a large amount of joystick waggling will be capable of throwing them off (if only John Hurt had known that in the first film). The worker aliens also start dropping down the ladders, so it's nearly impossible to tell where you'll come

### THOSE WHO CAME BEFORE

There have been several other *Aliens* games on different formats before now. The first, which was a strategy-cum-adventure based on the original flick, was released on the C64 ages ago. It received some praise at the time, but never really took off. Then came the *Aliens* movie and along with it two games on the C64. The first was a first person perspective exploration game with overtones of *Operation Wolf*. When an Alien appeared you had to steer a crosshair onto it and blow its head off. Because most of the screens looked the same the game was a little dull.

Finally there was *Aliens US*. It looked good to begin with, featuring what passed for colour digitised pictures in those days and with each level based around specific scenes in the film. What let it down was the lack of any talent on behalf of the programmers. The ventilation shaft scene was translated into a maze game which looked like a really poor version of *Pacman*, and the scene with the drop-ship at the start of the game just had you steering it through several white hoops.

under attack from next.

To begin with the scenery is nice and recognisably human. There's the hospital, the abbatoir, complete with corpses, and the cell block. As she works her way deeper into the complex, the background becomes more alien-like, with tubes and other organic bits adorning every wall. Here's where the game gets really tough. You have to move very quickly as the maps are complicated and the prisoners are stashed all over the place. In addition to that, acid drips from the ceiling and there

are more Aliens than ever.

There are also secret rooms, which can usually be found by running into walls. These often contain ammunition and medical packs, although on the last couple of levels they play host to prisoners. To begin with it doesn't take long to learn the levels, but later on they become so big that it's impossible.

### LET'S ROCK AND ROLL

The sound effects are fantastic. Noises for the pulse rifle and grenade launcher have been sampled from *Aliens* and they sound terrific. Music plays throughout, although it's very subtle and you don't always notice it. The graphics are excellent. The Aliens are suitably spindly and, well, alien. There's some nice variation between the backdrops, although I think a little more could have been done with the *Alien* levels at the end of the game.

You can't really say that this does the film justice, mainly because most people will rate the game better than the movie. It also has so little to do with the movie's plot. What it is, though, is an excellent *Aliens* game. It's full of action and the variety of weapons offer Ripley plenty of death-dealing opportunities.

*Alien 3* is definitely very challenging. There's plenty to shoot, lots to explore and the backgrounds vary enough to hold your attention. It has all the atmosphere of an *Aliens* film as you never know when one's going to leap out at you. This is one of the best movie-to-game conversions I've seen.

# SENSIBLE SOCCER V1.1

**Veteran football hooligan, Steve Merrett, slides his tackle towards Sensible Software's update of what is commonly-regarded as THE football game.**

## NEW TESTAMENT

It's a testament to *Sensible Soccer's* supreme playability that it was the only game capable of knocking Anco's *Kick Off II* from its position as the ultimate footy sim. However, as is always the case, the best could have been better, and whilst *Sensible Soccer* outflanked Anco's aging star in terms of playability, realism, and graphical finesse, its goalies were veritable Helen Kellers and it completely ignored fouls, red cards, and bookings. Time restrictions could have been blamed as Renegade were keen to get *Sensible* out in time for the European Championships, but even without these features, the Sensi boys did good.

So what's new? Well, all the aforementioned features have been added and the whole game tweaked and... er... oh yeah, for some reason Leeds Utd have been added (presumably the game didn't sell up there or something). Thus, after slamming the disk in the drive I prepared for what again should have been the ultimate footy experience. I'm not sure what I was expecting, but the minor modifications the Sensible lads have added have breathed new life into what was already a legend in its own lifetime. Although the presentation screens boasts new teams in the custom

league (including one called 'Look, Mr Taylor!'), it isn't until a dirty tackle is attempted or a shot fumbled towards the 'keeper that things start happening. Whilst the Ref doesn't actually appear on-screen as he did in the Anco classic, his omnipotent powers become apparent as he dishes out tiny yellow and red cards to offenders – and if a player receives the latter, he duly leaves the field with his head bowed!

## GOAL FINGER...

In addition, if the goalies of the original were akin to those in the Vauxhall Conference League, V1.1's 'keepers are a real step up – to the second division at least. My only real gripe with the first *Sensi Soccer* was that many a match was lost due to the goalie farting about doing nothing in particular whilst a long and slow ball drifted into the back of the net. Now, however, not only do they

use a little more savvy, but they can also nudge the ball from the goal if they can't hold on to it – and they even get up in time for a second chance as your opponents rush in for another crack! Although they still make the odd mistake and often let really dumb goals in, the addition of these enhanced 'keepers is the real saving grace of this updated version, and ensures that the games are real end-to-end affairs which keep the players on their toes.

I really cannot praise this update highly enough. Simply by conceding that the original wasn't perfect and actually doing something about it both Renegade and Sensible have scored well on my 'caring people' scale. However, whereas past enhanced versions of games (*Arkanoid*, *Xenon*, et al) have been minor remixes of old favourites, the additions made here are genuinely to the game's benefit. If you are one of the few sad individuals who didn't buy *Sensible Soccer* first time round, then do so now – they don't come any better than this. And I have a feeling that Renegade are going to be swamped with upgraders, too.

In this new version, your goalies aren't wearing blindfolds like they were in the first game. Indeed, they'll even pick themselves up for a second stab at saving the ball if they miss the first time.

## WHERE DO WE GO FROM HERE

The enhancements made to *Sensible* leave us wondering where they could go from here. When Anco released *Kick Off II*, Refs, free kicks, and aftertouch had been added, but between the original Sensi and V1.1 these ideas have already been covered. The sequel could feature players who cry when they get sent off before launching on a short-lived pop career, but as far as on-field action goes Sensible have it covered.

## SPORT FOR PC

# Play a round All year round

It's raining cats and dogs outside, but it's a beautiful crisp Spring day on the Torrey Pines Golf Course.

You approach the tee, driver in hand. Gazing down the fairway, you notice every feature of this classic Pacific Ocean Links course.

The Challenge of Golf takes you to a new level of realism. You can almost smell the grass, feel the silky putting surfaces and take in the fresh sea air. At times, you'll want to replace the divots, until you remember it's only a game.

But WOW, what a game!

And now, as well as the 256 colour 3D PC graphics, you can experience Links on Amiga, featuring exclusive HAM MODE graphics and digitised sound.

So, put on your sun visor and practice your swing. You're next on the tee.

Available on: PC (VGA or MCGA, 640k and Hard disk required.

Supports: AdLib™, Soundblaster™, MSound™ sound cards). AMIGA-Hard Drive and 1 Meg of RAM required.

©Access Software, Inc. 1991 All rights reserved.

## BANNER ROLLS

Banner Rolls, 45 feet with no seams or perfs! Creating large messages was never easier. Say goodbye to seams, perforations and tape! Now you can produce professional banners and signs with Banner Roll. This revolutionary computer paper is a continuous tractor feed roll of medium weight quality paper that has no cross perforations and microperf edges for clean, finished output.

Print your next sales promotion, convention slogan or party message on a Banner Roll. Forty-five feet of paper in 15 fabulous easy to use colours.

COLOURS include: Powder Blue, Harvest Gold, Pastel Yellow, Arctic White, Neon Orange, Neon Green, Neon Red, Neon Pink, Brite Red, Brite Yellow, Brite Green, Party and Holly. **Only £9.99 each.**

**NEW** Banner Rolls now available for 132 column printers. Available in Powder Blue, Pastel Yellow and Arctic White. **Only £12.99 each.**

**NEW** BannerMANIA PC supplied on both 3 1/2" and 5 1/4" **£39.99.**

## HEAT TRANSFER PRODUCTS

Print your T-shirts with our special heat transfer ribbons, colour pens and your printer. Our special heat activated ink transfers an image from paper to a T-shirt, penetrating the fabric for a long-lasting washable image.

You will get from 25 to 90 transfers per ribbon, depending on the size and density of your graphics. Simply print the image on computer paper with the transfer ribbon and use our colouring pens to give your transfer colour. Then iron the transfer onto a T-shirt or other fabric and you have it! Our complete, clear instructions are included.

In order to print our words you need a software program which reverses the printout. However, reversing graphics is usually not necessary for graphics that don't have words.

# NIGEL MANSSELL'S WORLD CHAMPIONSHIP

Battling for pole position in the increasingly competitive motor-racing simulation market is Gremlin's new big-name game. Steve Prizeman donned his car coat and took it for a spin...

Powering ahead in a simulated Williams-Renault Formula One mean machine, the player gets a feel for what it's like to be Nigel himself – but watch out for Ayrton!

A map of the circuit, rev counter, tyre wear indicator, speed and lap counters all help the driver gauge his performance, but they can be switched off to provide a more arcade feel to the game.

## PEDAL TO THE METAL

Get your motor running, as Steppenwolf said, but don't head out on the highway – try Silverstone, or Monaco, or any of the 16 Formula One Grand Prix circuits where the world's top drivers put their pedals to the metal in pursuit of the coveted title of champion. Gremlin's new driving sim is as straightforward as the curves and chicanes of the race tracks are complicated.

Putting you behind the wheel of Mansell's distinctive blue and yellow Williams-Renault, it lets you play the part of the laid-back speed-king and face his formidable rivals. Each race includes 11 entrants in addition to Nige, who, like our hero, have genuine drivers' names and car colouring. The drivers and cars have distinctive characteristics, rather than being a uniform army of automata, so some pose more of a threat than others. If you've wanted to reach the bend before Ayrton Senna, overtake Riccardo Patrese, or pass Martin Brundle on the straight, then you've got your chance. The circuits also copy the real-world tracks they represent, with to-scale twists and turns occurring in all the right places.

Wheels, aerofoils, gear ratios – all can be changed to gain optimum performance from your car. The work is completed in an instant too! Try getting that done at the local garage: 'Sorry, guv., can't get the parts. A week on Thursday alright?'

It never rains, but it pours! A 75% chance of needing the wet weather tyres at Silverstone is indicated here. Changeable weather conditions (wet or dry) are one of those features to add extra realism to the races.

## PRACTICE CIRCUIT

Naturally, you need to develop your skills before facing the challenge of Formula One, so you can begin in the driving school. There the circuit may be tackled with the vehicle in successive gears and a 'racing line' on the track shows the best position to take up. There is also an 'Improve with Mansell' option in which the world champion's head appears on screen to 'talk' you through a circuit, with advice appearing as written text at relevant moments. Gremlin has worked hard to make the face look like the moustachioed Mansell – earlier versions bore an unfortunate resemblance to Saddam Hussein.

Your car may be tuned prior to the race, with three types of tyre, aerofoil, and gear ratio, and the option of having automatic or manual gears (the latter providing a real challenge). If you don't feel up to entering the World Championship after this preparation, with all 16 races occurring in order, you may pick and choose your Grand Prix one race at a time. Before a race you may drive two qualifying laps, if you choose, in order to try and win pole position with a scorching time.

There are four levels of difficulty in

Around the world in 16 races. Each Grand Prix of the World Championship is available to test your talents on the track.

Pole position again – well done Nige! Don't take things for granted, however, the race isn't won until you're spraying the also-rans with champagne from the victor's rostrum.

BRITAIN	
RICARDO PATRESE 01:26.15	NIGEL MANSELL 01:06.20
AYRTON SENNA 01:40.96	MARTIN BRUNDEL 01:56.70
IVAN CAPELLI 01:48.88	GERHARD BERGER 01:42.71
M. SCHUMACHER 01:54.56	A. DE CESARIS 01:51.74
JOHNNY HERBERT 02:11.59	JEAN Alesi 01:55.24
M. ALBERTO	MIKA HAKKINEN 02:14.23

The open road stretches ahead, but this is no time for sight-seeing. Put the pedal to the metal or your opponents will be crawling all over your bumper before you know it.

the game: at the Championship stage, the highest, circuits amount to approximately 10% of the real track, so that, for example, you would race seven laps instead of 70. At each course there is a variable chance of rain occurring during a race, hence the need for a wet-weather tyre option, but there are no cross winds, or other elemental hazards to face.

### PIT STOP

As you might expect of a game that has not only garnered approval from Mansell, but from Renault Formula One and FOCA, the Formula One Constructors' Association, NMWC is an enjoyable and reasonably realistic simulation. The down-side to such endorsements, however, is that Gremlin has been obliged to recognise the sensitivity of these groups (and individuals) to the portrayal of crashes and damage. In short, there isn't any. Track-side signs, bridges, bollards and haystacks may be struck, and other cars nudged, with no visible effect – at first. This is probably fair enough – after all it is Formula One, not a demolition derby. All damage is converted into symbolic 'tyre wear' (as is tyre wear, of course). A set of tyres in the top right of the screen change colour as damage mounts up. When they start to turn red it's high time to enter the pits and trust your team to make

speedy repairs and tyre changes. Careless driving, such as hitting signs, slows you down and can even cause you to stall, allowing your rivals to zoom past. If you get too close to walls, and clip them with the side of a wheel, an atmospheric shower of sparks is raised (and heard) – a nice touch.

Graphically, the game is well-presented, but unremarkable. The car sprites, track, and backdrop are all convincing enough, but the ground surrounding the track is somewhat flat and lifeless. One particularly impressive effect, however, is the inclusion of working wing mirrors, accurately showing the position of cars chasing your tail. The game is introduced by a pleasant funky tune, but what you hear is mostly dominated (unsurprisingly) by the whining of engines straining away at top speed. Sound effects indicating collisions and falling rain may also be heard.

So, if you want to find yourself on the winner's rostrum, spraying champagne over an adoring crowd, this may be the place to start.

The stylish racing helmet shown here heralds the 'improve with Mansell' option: expert tuition in learning the arts of Formula One racing. Due to the lack of crashes protective headgear isn't something you'll need.

Three types of tyre are available – wet, soft, and hard. Retreads are not an option, it's quality you're looking for if you want to be a winner. Alter your machine to match your circuit and weather conditions.

The Man(sell) himself talks you through a circuit, giving you tips on better racing technique when necessary. Make sure you pay attention – there's no room for Sunday drivers in this game.

### PERFECT FORMULA?

The Williams and Renault teams encountered many ups and downs in their very different histories before hitting on the successful partnership which provided the basis for Mansell's dominance of the 1992 World Championship.

Although Renault won the first ever French Grand Prix, way back in 1906, it left Grand Prix racing two years later and didn't return until the 1970s. Renault achieved several high positions in the Constructors' Championships of the early 1980s (2nd in 1983, and 3rd in 1981 and 1982), but, on the whole, its performance was less than might have been hoped for and its team did not contest Grands Prix after 1985. In 1989, however, Renault returned to the Formula One scene by supplying engines to Williams.

The first Formula One Williams car was sponsored by an Italian model company named Politoys. Politoys FX3, as it was known, suffered the ignominy of crashing after only seven laps in the 1972 British Grand Prix, staged at Brands Hatch. Williams' perseverance was rewarded in time, however, with the company winning its first Constructors' Championship in 1980 – an achievement it has repeated in many subsequent years.

This season has seen their best achievement yet, with both the teams' drivers, Mansell and Patrese, coming first and second in the drivers' championship and the team itself winning the constructors' championship.

The sparks fly! Mind the walls of the Monaco tunnel if you want to preserve your tyres.

## BECOME A GRAND PRIX LEGEND IN A RACE FOR THE TITLE OF WORLD CHAMPION

LICENSED BY FOCA TO FUJI TELEVISION COPYRIGHT GREMLIN GRAPHICS SOFTWARE LTD 1992.

# AMBERSTAR

**A classic fantasy role-playing game? Steve Prizeman strapped-on his suit of elven armour, and grabbed his magic staff – then came to the office to review Amberstar.**

Amberstar, new from German software house Thalion, is a game which promises much, but delivers comparatively little. The impressively designed packaging, the assorted props and goodies within the box (poster, map of the magical world of Lynamion, and simulated parchment bearing a key for interpreting runic messages), and the substantial, well-written instruction manual lead you to believe you're in for something special. You're not!

The world in which the game is set is a sub-Tolkien land containing every cliché in the fantasy fiction/Dungeons & Dragons books. For example, the game intro opens with your 18 year-old hero grieving beside the graves of his parents, murdered by orks (sic). Veiled references, and later more explicit ones, make clear the nature of the main quest in which the hero should involve himself: preventing the summoning of the evil Tarbos, God of Chaos, who ravaged the world a thousand years earlier. For Tarbos read 'Sauron' and you'll get the picture as to why this is a BAD THING. A novella included in the back of the manual gives his origin story in grim folktale form (gifted, but unpopular boy learns magic and absorbs the spirit of a demon lord). Let's not read anything into the description of the inhabitants of the boy's village as 'blond haired and good natured', whilst his 'hair was as dark as raven feathers by night and his temper was even darker'.

The game is controlled easily (though not without a fair amount of reference to the manual) by the icons positioned to the right of the 'window' occupying most of the screen. Through the square window appears your view of the world. There are two

ways of seeing things: a two-dimensional top-down view of your character and his immediate surroundings, and a three-dimensional eye-level view representing what is directly ahead. The latter is used when negotiating the labyrinthine alleys and tunnels without which any RPG would be incomplete. The top-down view provides significantly greater detail (tables, chairs, pots and pans, etc) than the 3-D mode which leaves you wandering through the empty, monotonous, virtually deserted streets of Twinlake (the town where your character begins his adventures).

The computer decides which view you see, depending upon where you are. The 2-D screen is drawn so that only those objects within possible lines of sight from where your character is standing are shown. Furthermore, if it gets dark while he's wandering around only a gradually narrowing circle of ground surrounding him remains visible. A map may be called upon, and is essential for finding your bearings, given the identical streets. Unfortunately, however, the map reveals the plan of areas your character has not yet explored.

Streets ahead? The stonework looks nice enough, and a reasonable sense of 3D movement is conveyed as you walk past it, but the routes are empty, boring, and repetitive.

It also exposes the large number of useless dead-end streets included in the town simply to give extra mileage for wandering around, with no buildings accessible (or even visible) from them to justify their inclusion.

Graphics are not this game's trump card – many approximating to Vision On's gallery on a good day. The sound, however, is much more enjoyable. Continual music (but no sound effects that I noticed), altering in theme and mood depending on the geographical location of the hero, adds greatly to the game's atmosphere. Whilst some of the music is reminiscent of Beatles' tunes (one is very Strawberry Fields-ish), others tend towards New Age ambient and lift-music. It has to be

Wizard prang! The saffron Santa with the sparkler is one of the many stock characters with a cardboard personality who may be bumped into whilst roaming the streets of Twinlake. They readily drop hints to nudge the plot along.

admitted, though, that due to its constant presence some of the music does become very, very, tooth-grindingly irritating.

There is plenty to do in Amberstar, unfortunately most of it is very repetitive. It is a game to be played by people who enjoy spawling, to-ing and fro-ing games which take a long time to get into and get satisfaction out of.

Despite what this looks like, BC Kid is not about to be munched by the tearful dino. This is actually the entrance to the next section. From here, BC finds himself transported into the inner bowels of the huge dino, with saliva pits and other such obstacles to overcome.

2800  
**BC**

**A head-butting stone-age skin-head is the unlikely star of Ubisoft's latest platform game.**

**Dan Slingsby gets ready for some serious dino-bashing.**

### NUTTY BOY

Hudson Soft have done it again. Not content with giving us one of the most addictive bomb 'n' run maze games ever in the form of *Dynablaster*, they've now gone and developed a gob-smacking platform game that's destined to become something of a classic on the Amiga.

The star of *BC Kid* is a prehistoric Charlie Brown-lookalike with plenty of attitude. Not for him any club-wielding antics, this guy actually head-butts the opposition or, even better, performs a flying leap through the air and nuts them when he's falling back to Earth. If any nasties should get caught in this way, they are immediately flattened and dispatched off the screen.

So why is our nappy-wearing primordial skinhead such a violent headcase? Well, his girly, the beautiful Moon Princess, has been kidnapped by the evil King Drool and to find her, our cave-dwelling hero must first roam the game's five levels and numerous sub-stages in an attempt to track her down. Unfortunately, this being the Prehistoric Age and everything, there are an awful lot of improbable-looking dinosaurs littering each level as well as other obstacles such as erupting volcanoes, quicksand, lava pits and huge end-of-level bad guys.

### BUTT BRAIN

The first level begins with our rotund little friend setting off on his head-butting quest. Early on things are a bit tame with few dinos to nut and even fewer obstacles to overcome. It's a bit like an appetiser and merely serves to familiarise the player with the style of play. The green smiling crocodiles are dispatched with just one kiss of the forelock while the axe-wielding dinos can be put out of action with a double header. As mentioned, it's also possible to flatten approaching nasties with a flying head-butt. This is done by pushing up on the joystick and then pressing the fire button while the Kid is in mid-leap. This turns him upside down so that he returns to Earth with a diving header. The advantage of this move is that all nasties can be taken out with just one hit.

Further on in the level things start to get a bit more difficult as you're suddenly eaten by a huge bron-

tosaurus. From here, you're transported into the dinosaur's murky bowels complete with saliva pits and the murky remains of previously eaten beasties. Once you've battled your way through that lot, you're suddenly dumped into an underground cavern where you have to do battle with an end-of-level dino. To defeat him, the Kid has to bounce up and down on his head, nutting him continuously until the egg shell that's stuck on his head is shattered.

As well as the enemy sprites to take care of, there are also a number of special plants scattered about each stage. The first type act as trampolines and jumping on these allows you to collect energy giving bonus fruits and reach inaccessible platforms or caves. The second type of plant life release energy bonuses after they've been bounced on, but beware as some also contain a few nasty surprises such as an evil spirit which pogos along the stage sapping your energy.

### WHO THE HECK IS BC KID?

For those not in the know, *BC Kid* began life as the *PC Kid* on the PC Engine console. Over in Japan, the cute dino-bashing skinhead is nearly as popular as Sonic or Mario and has already starred in a couple of games as well as adorning towels, mugs, t-shirts and assorted paraphernalia. Curiously, in the United States he's known under yet another name, that of *Bonk!*. Quite why this should be is unclear, but what is evident is that here we have what looks likely to become one of the most famous faces on the Amiga and definitely one of the best platformers ever. Let's hope the second game gets converted, too!

# KID

There is often more than one way to complete a stage. This might involve a bit of deep sea diving or swinging from tree vines to avoid having to slug it out with the land-based dinos.

Here's the first end-of-level dino. To beat him, BC needs to repeatedly bounce on his bonce.

Most nasties can be taken out with one or two head butts, but later on there are more powerful foes.

## MEAT IS MURDER

Other plants and some of the bounced-upon nasties also release huge meat kebabs which, when collected, transform our hero into a rampaging maniac and really make him let off steam. These come in two sizes: the smaller donna grants the Kid a super butt capable of flattening any nasty with one nod of the head. As an added bonus, cracking his head on the floor will also freeze any nasties who are on the screen for a few seconds. The larger kebab grants the Kid with a few seconds of invincibility, time enough to charge around and send everything you come into contact with flying off the screen. As well as going a very dark brown when he's in such a mood, a bright green Ready Break glow surrounds his body. There are a surprising number of these power-ups included in each level and they come as a welcome find when things start to get tough.

As well as the kebabs to munch on there are also a number of special smiley faces to collect on each stage. These are either released after bashing certain enemy sprites or found in some of the game's more inaccessible areas. It's important to collect as many of these as possible for at the end of each level the total is added up and if you've collected enough your energy will be topped up.

After the first 'trainer' level is out

of the way, the action proper begins. Level two includes swampland, caves, woodland, quicksand, open stretches of water and a Tarzan-like section which requires the Kid to swing from vine to vine high up in the trees. Each stage adds something new to the proceedings, be it a new enemy or new skill to learn, and things get decidedly tougher the further into the game you get. This is what keeps things from getting dull and provides the 'just one more go' addictiveness that'll keep you coming back to this game until you've completed it.

## LIVE AND LET DIE

In all there are more than 20 stages to complete. My only criticism is that it's a tad easy in parts. You begin the game with three hearts and two extra lives which slowly decrease after every hit and after you've exhausted all that lot there's the option to use three continues. Although these only take you back to the beginning of the current level and not a particular stage, it still means you can gallop through the initial few stages. I doubt whether most players couldn't finish this in less than a week of constant playing. There's also an extra life granted at 10,000 and 20,000 points so the game's designers have given you every opportunity to complete the game.

That said, *BC Kid* is still worthy of a Superstar for the sheer inventive-

ness and originality of its design. Of course, the tech-heads amongst you will immediately moan that the game hardly pushes the capabilities of the Amiga, but that's not the point. *BC Kid* doesn't have to push back the boundaries of computing as it's already damn near perfect as it is. Any superficial tinkering, such as introducing parallax scrolling or extra colours would only serve to distract from the already brilliant gameplay.

As it stands, the graphics in *BC Kid* are fun and very detailed. The level of animation is superb with the Kid's many facial expressions and bodily contortions adding massively to the game's humour. The sound, too, deserves special mention. There are several in-game tunes to choose from and each one is so catchy you'll find yourself humming them constantly. But you'll be able to find all this out for yourself as there is a *BC Kid* demo attached to this very issue. Are we good to you or what?!

Comparisons will obviously be made to Core's prehistoric platformer, *Chuck Rock*, which was released last year. Whereas the star of *BC Kid* head-butts his opponents, Chuck used his belly to bump the nasties off the screen. Another note of similarity is in the incidental humour and amazing facial contortions of all the on-screen characters as well as the lush graphics, fine in-game tunes and special effects. It's also possibly true that if you enjoyed

*Chuck* then you'll get a kick out of *BC Kid* – but Ubisoft's offering is definitely the superior game, thanks to the ingenious game design which always offers something new for each stage.

What all this amounts to is one of the most enjoyable platform romps I've played in a long, long time. Forget the likes of *Fire and Ice*, *The Addams Family* or *Parasol Stars* – if you're into platform games, then this is the essential purchase to make. You won't be disappointed. ☺

# JOE & MAC CAVEMAN NINJA

As with any decent platform game there's always an end-of-level guardian to face. Joe and Mac is no different.

**Is it true? Could the Amiga be beating the SNES at its own game? Tony Dillon goes in search of the truth.**

## BETTER BY FAR

Joe And Mac Caveman Ninja might seem like a bit of a lengthy handle to most people. There is a reason. In Japan, the coin-op is simply called *Joe And Mac*, and the US market takes the rest of the title. Elite have bought up the rights, and so to keep global happiness they've stuck it all together. After successfully piecing together the SNES conversion, winning 4/5 on TV's *Bad Influence*, they've stuck it on the Amiga. What's more, they're even claiming that it's better than the console version! Only having seen the console version in demo form, I can't really comment on that.

The story tells of two cavemen with a fairly idyllic lifestyle. Plenty of food, plenty of hunting, and more than enough cavegirls to entertain them. All is well until a rampaging horde take the village

by surprise one day whilst our heroes are out on one of their regular hunts. When they return, they discover that their female companions have been kidnapped. Do they turn celibate? Do they heck. This is where you come in.

## ROAD TO RUIN

The enemy have covered a lot of ground - 15 levels in fact, and you have to travel through them in search of your late night company. Starting off in your average prehistoric forest, you work your way through volcanos, mountains, waterfalls, ice caverns and some violent thunderstorms all the while fighting the best your enemy can throw at you, as well as all the natural hazards posed by the wildlife, such as aerial attacks from hungry pterodactyls or the teeth pickings of a tyrannosaurus rex. One of the nice things about the way the game is laid out is that you don't need to follow the same route twice. Half a dozen times through the game you'll be asked whether you want to follow the A or B path. This way, even if you get to the end, there's no guarantee that you've seen everything the game has to offer.

In one player mode, it's a good game. As Joe, you have to wander from left to right, occasionally moving up and down, killing everything you can and collecting all the bonuses that appear. Along with all the typical objects such as fruit for extra energy and bonus points, there are stacks of weapons to collect including boomerangs, fire, a wheel (!?!), and the mystical self weapon, a strange tool that involves you throwing likenesses of yourself at the enemy to confuse them. Naturally, at the end of each level, you have to

face a massive guardian which usually takes hundreds of hits in the right places before they fall down. My favourite is the Mammoth that gradually falls apart as you hit it, losing its trunk, and then its tusks before crashing to the ground.

## THROWING A FRIEND

In two player mode, the game takes on a different twist. Although Joe and Mac are the best of buddies, they don't believe in sharing women, so the person who does the most destruction on a level is the one to win the girl. With that in mind, things take on a more competitive angle, as well as introducing a new move. A character can stand on another character to gain height while attacking, and while they are stood there, pulling down makes them grab their human stepladder and pick them up. This done, they can then throw their burden at the enemy, to use them as a distraction and a weapon. Once someone has done this to you, the obvious reaction is to do it back, so you spend hours trying to leap on each other's shoulders, and forget about everything else.

Joe And Mac Caveman Ninja is a lot of fun to play. Not as complete or polished as *Zool*, but still a great platform game. Controls are responsive, the graphics are good and the sampled sound is excellent, but I couldn't help feeling that in these times of epic Amiga games, this one is just a little too limited. If you liked the arcade version, though, you'll probably love this.

Watch out for the pterodactyls! They tend to swoop down at the most inopportune moments. Like when you're in mid-leap across a chasm.

**If You Can't Beat 'Em** *Caveman Ninja* is a game designed to run on a console. The main controls feature a button to fire and a button to jump. Obviously you can't do this on an Amiga without resorting to the keyboard, so what Elite have done have made the game compatible with the SEGA joypad.

# EDUCATION WAS NEVER THIS MUCH FUN

Noddy's Playtime is a graded creativity and entertainment package for home computers based on solid educational principles for 3-7 year olds.

Drive with Noddy in his car and explore the magic of Toytown, visiting the 8 special learning locations.

- Railway Station - memory game
- N&B Works - observation game
- Chimney House - musical fun
- Noah's Ark - jigsaw puzzle
- Farm Yard - animal matching
- Market Place - letter recognition
- Post Office - counting
- Police Station - maze game

Also included is a junior Art Package which develops your child's creative ability.

- Picture Colouring.
- Electronic 'fuzzy felts'.
- Freehand drawing with pens and spraycans.
- 50 pre defined fill patterns.
- One finger on, one finger off mouse control for tiny hands.

Noddy's Playtime features user friendly icons so that even the youngest family member can learn and have fun.

There is a choice of 3 carefully defined learning levels designed in consultation with teachers. Noddy's Playtime also includes FREE: Toytown map, keyboard overlay and wobbler. A comprehensive manual and parent teacher guide will enable you to bring your child's imagination to life.

**Amiga Format**  
Amiga A500 and above

**Available from the end of November at major stockists.**

## SPOILS OF WAR

Tabletop wargaming is a genre that has been emulated time and time again in computer games, and it doesn't seem to be too hard to get them right, providing you have a decent game system. *Spoils Of War* is an attempt at a true tabletop game, and what a great attempt.

The aim is to search a new found landscape, finding islands and colonising them before any of the three other possible opponents do. Success guarantees you a position at the King's side.

You don't actually do any of the hard work yourself. You need explorers to do the dirty work, and these are divided into four categories, from Governor (good in towns and at controlling people) to Commanders, used to lead your strikes across land and sea. You

begin the game with little money, and have to build your armies from scratch.

*Spoils Of War* is played out over a series of game turns, like any other wargame. What's new is the dauntingly high level of strategy involved. You run everything in this game, from ground level taxes on up, and getting things running smoothly is a challenge in itself.

Clicking on icons opens up sub-menus, giving you the chance to do almost anything, from hiring some colonists to building a boat. A scrolling map window gives you a view onto the world, and is also where most commands are issued.

Where the game really stands out is in close-up battle. The high level of intelligence shown by computer opponents gives their moves a calculated feel, rather than seeming merely random. Depending on how you fight each battle, it's possible to take on a huge army with a small bunch of soldiers and win, provided you find a weakness and exploit it.

I'm a fan of the genre, so I liked *Spoils of War* a lot. However, I doubt if non-wargamers will get much enjoyment out of it, as there is very little to appeal to them. One for purists only, I'm afraid. Tony Dillon.

**Interneine**  
**£29.99**

**82%**

## CAESAR

It's the first century BC and you get to play the part of an ambitious brown-nosing public figure eager to grease up to Caesar Augustus, the current Emperor of the Holy Roman Empire. Your main aim is to run your allotted province as efficiently as possible and thus gain Caesar's favour.

In effect, this means building and maintaining the essential infrastructure of the country, such as housing, the water-supply and transport links. Whilst creating and developing your part of the Empire, you are constantly under threat from tribes of barbarians who will attack the city to take advantage of its resources. So building up your city's defenses should also be high on your list of priorities.

As you can see, *Caesar* offers a good mix of gaming skills. Be careful, though, as if you expect too much from your people and drive them too hard, they'll rebel and oust you from

your favoured position of power. To keep them happy, you have to ensure that your province is well defended, prosperous, and law abiding. And believe me, that's a tough task.

If you govern the province successfully your game rating will increase and Imperial favours will be dished out. Progression and promotion involves being placed in charge of a new, and more complicated, province. The overall objective is to gain enough success to overthrow Caesar and become Emperor yourself.

*Caesar* holds its own when compared to other god-type games. The graphics are extremely detailed, even down to little members of the public roaming the streets. The sound effects and music are very atmospheric and the point'n'click control system is easy to use with little need to consult the manual.

Avid god-sim players will find *Caesar* a welcome addition to their collection. The depth of gameplay and sheer number of possibilities offer a great challenge whilst it's also tremendous fun. New players eager to experience a god-sim for the first time, could well find *Caesar* to their liking. It's certainly no *Sim City* or *Populous 2*, but it does have a certain historic appeal. Stephen Kelly.

**Impressions**  
**£25.99**

**79%**

## PREMIER MANAGER

*Premier Manager* adds little that is new to the football management genre, other than updating the league structure. Ground improvement, scouting for talented players and organising transfers, selecting a squad which maximises players' skills and the playing style that suits them best, and juggling the income and expenditure figures upon which a wary eye must be kept – all are present here. Training and physiotherapy are also available to keep your lads in peak condition.

Up to four players can simultaneously manage teams, all starting their careers in the Conference League. Success will bring offers of contracts from Third Division teams, possibly heralding a meteoric rise to the top of the Premier League itself.

Failure could lead to you being sacked and a desperate search for some part-timers who'll give you a chance ('Accrington Stanley? Who are they?').

The players' and managers' names listed for each team are correct for the start of the 1992/93 season and each player is allocated a rating for his skills in shooting, tackling and passing. Further realism appears in the form of a safety rating for club grounds, generally requiring improvement following the recommendations of the Taylor Report. If you want to expand your ground's crowd capacity, for example, existing terracing needs to be converted to seating. Upgrading costs money, and one valuable source of revenue is to sell advertising space on the 48 hoardings surrounding your pitch. A variety of well-known companies and magazines will stump up plenty of cash so that you'll display their logos. CU Amiga's name makes an appearance, as do those of publications more in need of the exposure.

*Premier Manager* is very well presented and easy to use, although, by its nature, it's not particularly exciting. This will almost certainly appeal to fans of the genre, but will leave most other gamesplayers cold. Steve Prizeman.

**GREMLIN**

## RAMPART

'Damned hard pounding this,' the Duke of Wellington reportedly said during the battle of Waterloo. 'Let us see who can pound the hardest.' This is the essence of *Rampart*. Superficially set in an earlier mediaeval era, it is accurately billed as a game of strategy and survival. With a single player pitted against a computer controlled invasion armada, or two players fighting each other (and a computer controlled invasion armada, just for good measure) the aim remains the same: surround your castle with walls and blast your enemy's fortifications with cannons.

Both the concept and the gameplay are simple and straightforward – but very hard to do well. The shelling from the oncoming fleet, and the hammering opposing players give each other, raze walls to the ground with frightening speed – and speed is a vital factor in *Rampart*. After each artillery exchange a

ceasefire is announced, and this is when things get difficult. With only 20 seconds at your disposal you manipulate oddly shaped building blocks in order to repair your walls and expand your territory. Your castle has to be encircled by walls if your cannons are to fire, and rest assured that if you don't bash your enemies quickly, they'll flatten you.

Inflicting damage, repairing your walls, and annexing more land with new walls gains you points – and what do points mean? Well, in this game they mean more cannons, if you've added a new castle to your growing, but troubled, empire. Failure to surround the castle means instant defeat and, in the two player game, a quick trip to the guillotine.

The graphics are nothing to write home about, with a three-dimensional bird's eye view of the battlefield during combat turning into a similar, but two-dimensional map for the brick-laying phase. An endearing tune plays through much of the game (Cloppa Castle meets Trumpton!), and commands to fire and cease fire may be heard, in addition to the sounds of combat and occasional cheers. Enjoyable but lacking variety. Steve Prizeman

All Supra Modems come with a 5 year warranty!!

## VIDI AMIGA 12

Replacing the famous Complete Colour Solution, this new package from ROMBO is even better

The ultimate low cost colour digitiser. No filters or RGB splitter required. Colour images can be captured in less than a second, mono images are grabbed in real time. Fully compatible with any video source.

Includes multitasking software, cut & paste with masking, multiframe store with animated playback, composite or s-video input, 4096 HAM support & many more advanced features

**only £77.99  
or £99.99**

with built in

**MEGA MIX MASTER!!  
TAKE 2 only £39.99**

This is latest animation package for the Amiga from Rombo. Features include load and save from D, Paint animations and IFF files. Supports HAM graphics.

**MEGAMIX MASTER**

This is a low cost 8 bit, high spec. sampler that plugs into your printer port. Special effects include echo that can be added in real time, fully multitasking and easy to use.

**only £29.99**

We recommend all ROMBO products

### PRIMA ROM SHARERS

Because some older software will not run on Kickstart 2 First Computers launched the PRIMA (as supplied to Phoenix) ROM sharer. This high quality ROM sharer features a flexible ribbon connection so that it can be positioned anywhere within your A500 Plus or A600. Full 2 year replacement warranty

now only £19.99 or £27.99  
for keyboard switchable version

## GVP HARD DRIVES & ACCELERATORS

### AMIGA A500 HARD DRIVES

GVP Series II HD8+ 42Mb.....only £289.99  
GVP Series II HD8+ 80Mb.....only £379.99  
GVP Series II HD8+ 120Mb.....only £419.99  
GVP Series II HD8+ 240Mb.....only £669.99

# CAMPAIGN

**The smell of diesel, the sound of gunfire, the heat of battle... yes, it's Nick Veitch arriving for work.**

## WAR, LOGICAL?

The logic of war seems to be that if the belligerent can fight, he'll do it with tanks. Certainly during WWII, from the initial Blitzkrieg to the last stand at Berlin, when something had to be done it was done with heavy armour. Tanks are the backbone of the modern army. At least that's what Empire believe, and who can blame them for adding to their string of reasonably successful tank simulations (*Team Yankee*, *Pacific Islands*) with yet another.

Campaign bears very little relation to those previous titles though. Although predominantly a tank simulator, the strategy aspect has been developed far beyond just popping into your trusty two-tracked friend and blasting holes in the enemy. The campaign map (which can be anything from the size of Greater London to most of Western Europe) is the focus of attention now. Tanks, ships, aircraft, convoys and factories must all be managed properly to produce a successful outcome to the conflict. Everything is arranged in groups and depicted on the map, with optional unit names if you can't tell your shock force from your light artillery. The issuing of orders is as simple as clicking once on the unit and once on its destination. The computer can take control of any units that you are not particularly bothered about, which means you can leave it to take care of airstrikes and ship-to-shore shellings if you can't be bothered re-designating the targets every half an hour.

## CLOSE COMBAT

When opposing forces get too close to each other a close quarters combat ensues. You are given the option to let the computer calculate the outcome, but you'll never win any medals that way and you could suffer a shock defeat. At least if you are controlling the tanks you know who to blame when the dust settles.

A schematic map showing trees, buildings and minefields in the surrounding area is displayed, along with small boxes depicting your tanks. To take direct control of a tank simply click on it and it will turn blue. Then you can go to the 'from the turret viewpoint' and see the terrain as it would appear to the tank commander.

The surrounding terrain is quite well detailed considering the speed at which it animates. The detail level of the ground and of the surface objects can be altered to allow for accelerated machines. This doesn't quite compensate for the speed of an '030 though, and the stealth and tactics of tank battle turns into a dodgem ride with machine guns.

The tank is actually best controlled by the keyboard and a preferences screen allows you to choose whichever keys you like for the specific tasks. Each track on the

vehicle is controlled individually and, where applicable, the turret is moved left or right independently. Some of the vehicles can also tow the field guns around, but if you are deploying field guns and trucks on the front-line then something is going wrong...

## HIT 'EM FROM THE AIR

Air and artillery support can be controlled manually or by the computer and can deliver a devastating blow to a close group of enemy vehicles, although more often than not you can hit your own tanks if engaging at close quarters.

All the vehicles and aircraft in the game have been lovingly researched and are very accurately represented. This not only applies to the polygon rendering of the vehicles, but also to their physical capabilities as well; speed, range, armour gun traverse – every important military aspect of the vehicle is taken into consideration. All the information in the 170 page equipment manual finds its way into the game somewhere.

The vehicle types used for the main ground forces include engineer, spotter, infantry, light and heavy artillery units as well as MBTs. Each has a different function – engi-

The opening sequence really sets the scene of a great battle. The sampled sounds and high quality graphics promise much.

neers can lay or clear mines, spotters direct artillery fire, etc. All of them, that is, apart from the infantry. The use of infantry is not explored at all in the game which is not only a great omission in terms of historical fact, but can also severely restrict strategic options. No airborne units means no way of securing important objectives ahead of your advancing machines. No infantry means that easily defensible positions such as bridges, mountain roads and cities must be protected by tanks. This doesn't detract from the fun of the game, just from its realism.

The map editing section allows you to create your own battles, down to the rivers, roads and minefields and also allows for a bit of fiddling if you think a campaign is going particularly badly. This boosts the longevity of the game quite considerably, even though there are a lot of sample campaigns included. The computer controlled units show no flair for strategy, but their tactical manoeuvres are quite good and, if provided with decent equipment, can make for a challenging game.

Use the rev counter and listen to the engine noise to tell when it's time to change gear.

The whole horizon tilts as you steer, which looks fantastic when you're speeding around corners.

# NO SECOND PRIZE

When we asked him if he wanted something hot and throbbing between his legs, Mark Patterson jumped at the chance. You can imagine his disappointment when he found out it was only a motorbike sim.

## MOTORBIKIN'

Living in central London like I do gives you ample opportunity to play such wondrous games as dodge the motorbike dispatch rider, most of whom go around thinking they're at Silverstone and that 70mph is an acceptable speed in a built up area. Naturally, having to check eight-inch gaps between vehicles for on-coming bikes does get a little tedious, breeding a slight contempt for anything on two-wheels with a Japanese name.

Recently my disrespect for these bastions of hand-delivery has waned, with the discovery of this excellent, and extremely challenging motorbike race game. There's none of the leather and, more importantly, none of the danger, which makes this my cup of tea.

As you can guess from the title, *No Second Prize* is a game about winning. There's you, your mean machine, five opponents and 20 tracks. All you have to do is get past the line in first place and one piece.

One surprising feature is that it doesn't use a conventional joystick, instead it requires an analogue device such as a mouse. This is presumably because a normal digital joystick just wouldn't be responsive enough. The left and right buttons are used as brake and accelerator, which is fair enough,

but to change gears you need to keep a finger or two poised near the Shift and Alt keys to change up and down. In theory, using the mouse in conjunction with the keyboard in this manner should be easy, but I preferred not to play this way as it felt awkward and detracted from the action. Using the mouse to control the game is very uncomfortable at first, but surprisingly it doesn't require much room as the game responds to the slightest movement. The mouse sensitivity can be adjusted, but I found the default setting fine, with anything above that making the game uncontrollable.

There are a total of 20 tracks set around Europe, although most are in Britain. To begin with they have lots of nice straight bits and easy to handle corners, but as you progress they become far more twisted (in the literal sense) with less opportunity to open the throttle. As if that wasn't enough there are also hazards like bollards and concrete blocks which are placed in inconvenient positions to block off lanes

and force errors.

Because each race is six laps long the programmers have included a save-game option. It comes in very handy indeed as one race can last well in excess of eight minutes. All the lap records are stored when you save your positions, so when you've completed each track there's the added attraction of going back to beat your old times. Points are awarded for coming in the first five, and as there are only six riders (including you) it means that the field doesn't separate until mid-way through the season, so only the most disastrous performance warrants re-starting the game after only a few races.

## BARRY SHEEN

Accidents do happen, so it's fortunate that you and your bike are a

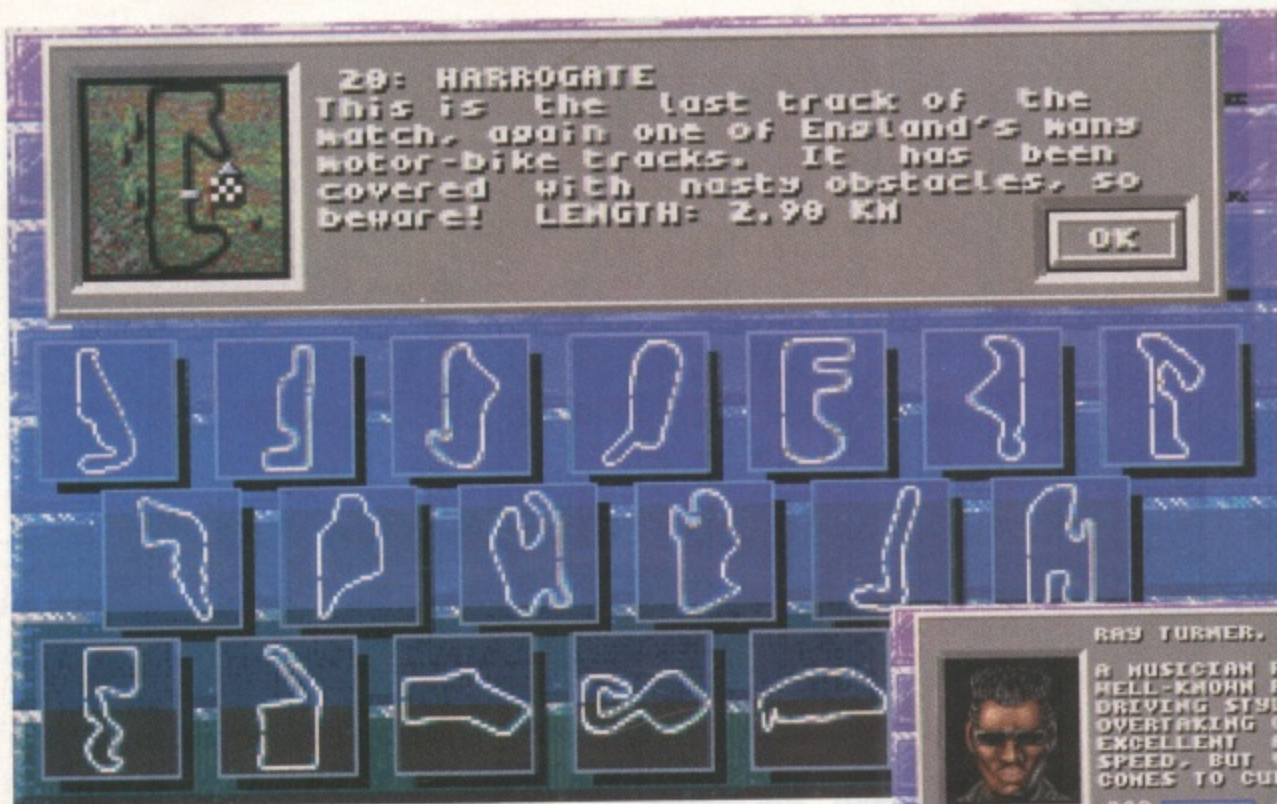

little more resilient than Barry Sheen's legs (am I showing my age?). Obviously smacking into a bridge at 200mph doesn't leave much behind, but simply sliding off into a road-side object or another bike adds to the two damage gauges, and it's when they're full that you'll be forced to retire from the race. There's a practice mode which allows you to ride on any track in the game against one or more riders, and it's well worth making use of this option as you won't stand a chance on the later tracks if you're not familiar with their layout.

The graphics are really something special. Because everything is vector based, there are no problems with the scaling of road-side objects, so they really add to the feeling of speed. To prevent the tracks looking the same there are a variety of grandstands and bridges for you to look at, as well as a helicopter which follows the progress of the race by buzzing over every track. The other bikers look a bit like something from *Tron*, i.e. not very convincing. But they're often going so fast you don't get to see much of them.

There aren't many displays to distract you from the action. The dashboard consists of a speedome-

ter, revs counter and gear indicator, and a map in the corner of the screen shows the positions of the other riders. You're forewarned about corners by signs which appear a few seconds before the turn. These indicate which direction it goes and how sharp it is, which is handy as some corners can be taken very fast so it pays to know how much you have to slow down.

### SKID MARKS

Most of the sound effects are made up from the rumblings of your bike's engine and the occasional screech of tyres when you take a corner too fast. There are also some smart stereo effects when you pass another bike. The way the track moves is fantastic. Whereas the road in most race games just runs

left or right, in NSP the whole horizon tilts when you steer, giving an excellent sense of realism.

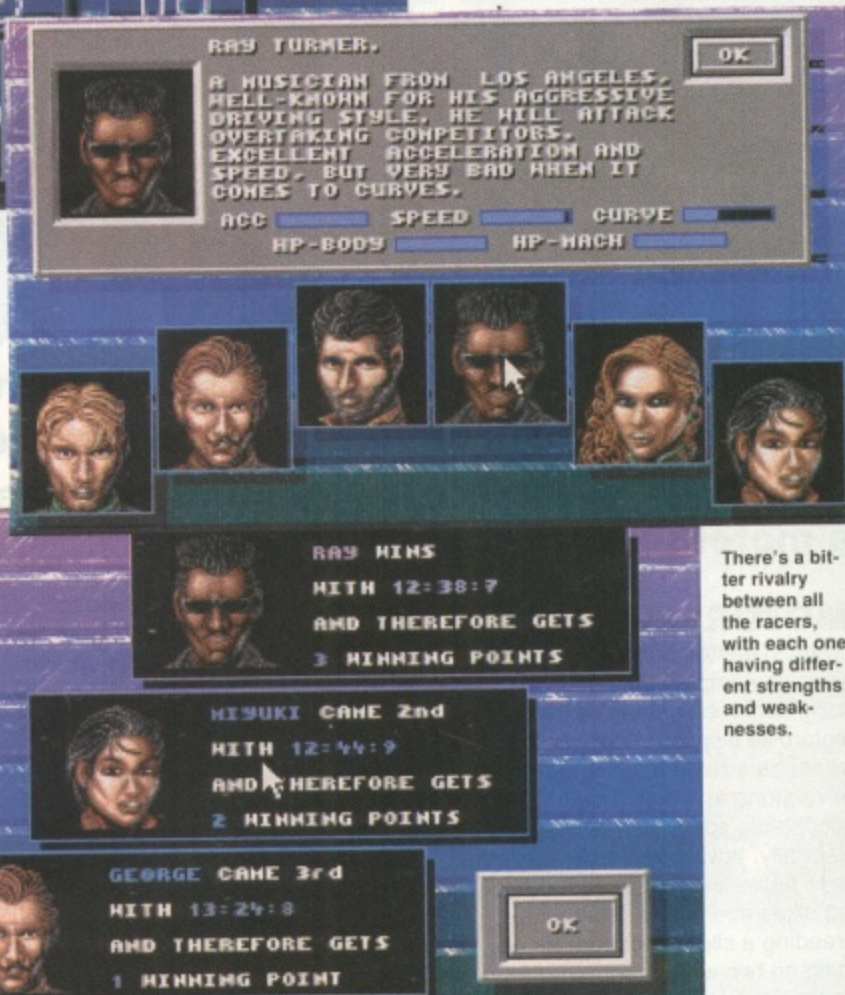

This is to motorbikes what Microprose's *Formula One Grand Prix* is to motor racing. It has all the essential features, which tend to be speed and realism in this type of game, and there's even a little intro. If I had one little criticism it's that when you hit another bike, or another bike hits you, it's only your bike that spins off the track, which is a bit unfair. That aside the sheer speed of the game means you don't have to be a real-life biker to enjoy it. Without a doubt the best motorbike sim on the Amiga. 

### ON YER BIKE

There are two types of bike available in *No Second Prize*, one with manual gears the other automatic. Naturally the automatic is easiest to ride as you don't have to worry about bothersome things like revs. The disadvantage from this bike is that it doesn't accelerate as fast as the other, which is a crucial factor as many of the later tracks have many turns which you have to slow down for.

Before you race you have to select your character. There are six to choose from and they, along with their bikes, have different strengths and weaknesses. Although there are many other bikes on the track, it's only the remaining five riders you have to worry about.

There's a bitter rivalry between all the racers, with each one having different strengths and weaknesses.

# REACH FOR THE SKIES

## THE BATTLE OF BRITAIN

Summer 1940. The future of World War II hangs in the balance. The cream of the German Luftwaffe and the aces of the RAF are locking horns in their most crucial confrontation yet – The Battle of Britain.

Over 50 years on, you have the chance to re-live that famous battle and play the part of a British pilot or a German flying ace. Your performance determines whether the outcome is a repeat of the British victory or an unprecedented German success.

Programmed by the team that brought you "Flight Of The Intruder", the definitive 90's flight sim, Reach For The Skies exploits the same unparalleled technology and reaches new heights of historic realism.

- Re-live the crucial days of the battle as controller, pilot or gunner.
- Includes huge array of in-flight options and controls.
- Choose from eight meticulously recreated aeroplanes – Spitfire, Hurricane, Bf 109, Bf 110, Ju 88, He 111 or Do 117.
- Features record and playback modes – watch and re-watch your favourite dogfights.
- PC version includes multiple sound board support, 256 colour VGA graphics and Gaurad shaded aircraft for extra realism.

Available on PC and 100% compatibles, Atari ST and Amiga.

# NO GREATER GLORY

Strategic Simulations Inc. are now well established in their field of game design with previous classics such as *Eye of the Beholder II*. After that recent success they have returned to their usual war game formula with *No Greater Glory*.

The game is an actual re-enactment of the American civil war and you play the part of either Abraham Lincoln or Jefferson Davis. You have to undertake all the strategic, political and economic decisions that will determine the fate of the American people for years to come, and victory is dependent on how well you utilise these skills in relation to the available resources.

The main gameplay consists of a series of turns, with each turn representing a season or four months. These turns are subdivided into phases in which all activities of a given type are conducted and resolved. Summary screens show how you are progressing and mark out the important changes that have been made.

Your first task on starting is to assign a cabinet of five out of a possible 12 politicians. Each member has to be assigned to a cabinet position, such as Secretary of State, Secretary of War, Attorney-General and so on. Each character has his own statistics, including administrative ability, loyalty and which region of the country he is affiliated with.

This is just the beginning. The real struggle is against the computer controlled enemy. During the component game phases the player deals with dissenting states, plans his finances, positions troops and finally observes the result of these actions. In an attempt to gain the support of the public and the various regions of the country you must use all your diplomatic and strategic skills to win.

Quite honestly, I can't see many people wanting to play this game for more than two hours as it lacks any flair or lastability. The graphics are very bland and the game stays completely mute whilst you are playing. A piece of music or even the odd sound effect would have added some character. Everything you see is text and icons and no attempt has been made to add variation to the game system. A two player mode would have been a good idea and would have given the game more depth. I don't think the majority of advanced strategists, let alone the average games player, are going to find this game easy or enjoyable to play. **Stephen Kelly.**

SSI/U.S. GOLD £34.99

# PALADIN II

I doubt if many people have seen the original *Paladin*. As I remember, it was a poor imitation of *Laser Squad*, so you can imagine how my eyes lit up when I saw *Paladin II*. After all, following their poor start, you would think that Omnirend would have realised where they went wrong. Well, that was my hope.

Sadly that isn't the case. Just to give you a little run down, *Paladin II* is a low-level wargame, where one unit means one man. It's set in a *Bard's Tale* style scenario, with you as the honourable knight battling evil wherever you find it, accompanied by a bunch of useless punching bags. As ever, the game is played in turns, and the computer player always has the advantage. As with legends of old, your *Paladin* is set a number of quests to complete, which build up in difficulty. The graphics are quite poor with hits being represented by a small skull and a kill by a larger one. The character's ability to do

'Which way do we go now? It all looks the same to me.' Even Paladins can get lost, especially when the land is as featureless as this.

anything is governed by the amount of movement points that he possesses.

I usually really enjoy this sort of game, but this left me cold. It looks naff and sounds awful, but those features are usually never at the heart of a game like this. The thing that this game lacks is any strategic elements. You sort of wander around aimlessly, looking for things to kill. A strategic title with no strategy? Avoid it. **Tony Dillon.**

# TINY SKWEEKS

Here's a classically simple game for you. Once you've waded your way through a tedious plot about some bad tempered furry children who get lost on Earth, you can indulge in everyone's favourite pastime – a variation on the sliding blocks puzzle.

The game is played out over 101 levels, each with the same aim. Move the small, round furry creatures onto the small circles on the floor before the time runs out. Sounds easy? It is. The only thing that stands in your way is the fact that these children are monumentally stupid, and don't understand how to stop once they start moving. Push them in one of the four primary directions, and they'll keep moving until they hit a wall or another obstacle.

As the game progresses, you get all the standard traps, such as arrows that turn them in another

direction, but it's all fairly standard.

On the face of it, this could have become a fairly enjoyable brain teaser. Unfortunately, there is nothing in here that hasn't been done a hundred times before, or a hundred times better. The first 20 – 30 levels offer very little challenge to the experienced gamer, and the rest of the game could be completed in a couple of hours. Don't waste your money. **Tony Dillon.**

# ZYCONIX

When the arcade game *Tetris* was released it was an instant smash, mainly because of the simplicity of the design and the addictiveness of the gameplay. There have been so many copies and PD ripoffs since its original release, most of which have been, at best, no better than the original. No one has attempted to do something different with the game concept, until now.

*Zyconix* is the name of Accolade Europe's challenger. Where the name comes from, I don't know, but you can instantly see that it has been based loosely around the *Tetris* format, with some extremely welcome changes to the gameplay.

The concept itself is basically the same, but instead of trying to build straight lines with various different shapes, the idea is to make horizontal and diagonal lines with a never ending supply of small square blocks which slowly fall from the top of the playing area. The blocks vary in colour and the lines that the player construct have to be of a matching colour before they disappear.

The player controls a square cursor which has to be placed over a falling block before its position can be altered. By hold-

ing the fire button down and moving the joystick, a block can be freely moved and placed into the desired

position. Over the various levels, there are all manner of helpful tools and annoying gadgets which can help or hinder your performance. These include mines, transparent blocks, disintegrator bats, spikes and even *Arkanoid* style balls which fly around the

screen and destroy all the blocks that get in their path.

There are different levels of play which cater for a wide range of capabilities. The difficulty of the gameplay is represented by four different characters who all have their own game style. They are Louis, Dazza, Spry and Shazza.

Initially, I liked *Zyconix* and was pleased to see a good variant on the *Tetris* theme, but after playing the game for some time things got a bit tedious. The control system can also be extremely annoying as you can unwittingly loose control of a block and end up plonking it right where you didn't want it. I would only really recommend this game to hardcore *Tetris* fans who would welcome a change to the game style, or to puzzle freaks who like to test their mental agility once in a while. **Stephen Kelly.**

Accolade Europe £19.99

64%

Phew, what a scorcher! Brandon might get a little hot under the collar if he tries to cross this flaming river without help.

Right: Dressed like an extra from *Dune*, Brandon waits patiently outside his home for instructions. One of the most effective animations is used here, as a tree branch glides up to him and acts as a lift to the forest floor.

Every scene in *Kyrandia* has been worked to perfection. Another smart little touch is the use of different viewing angles. It all adds to the atmosphere.

# THE LEGEND OF

**What would you do if grandad was a statue and a psychotic jester was killing your forest home? Jonathan Sloan puts on his silly hat and starts juggling.**

## HEADING OUT WEST

*Kyrandia* is the first in what Westwood Studio's hope will be a long line of 'Interactive Dramas'. They call this developing series: 'Fables and Fiends'.

The game engine for the series has been developed from the one used in Apple Macs. Which, President Brett Sperry says, is 'probably one of the most intuitive systems I've seen.'

Westwood's seven man creation team, spent over two years on the interface used in *Kyrandia*.

## TALKING TO THE TREES

After a hard day's flower picking, the last thing that you want to find is that your grandfather has been turned to stone. However, this is the first of many nasty surprises that young Brandon gets when he returns home to his tree-top abode. The next is that his house can talk and has grave news about a mad jester, called Malcolm (?!), who had it in for Grandpa, and for that matter, the rest of *Kyrandia*!

Apparently, Brandon is the heir to the throne, orphaned at an early age by one of Malcolm's murderous deeds, and the only one with a chance of stopping this new rampage. A quick visit to a voluptuous priestess later and Brandon's off to find a magical amulet. This trinket is the only magic left in the land capable of stopping the evil player in this piece, who looks and acts like a dangerous cross between The Joker and Mr Claypole from *Rentaghost*.

## WHAT'S IN A NAME?

Despite his wimpy name, Malcolm is a deadly dude. The beautifully animated opening sequence of the game shows him breaking free from his prison (where he's been magically bonded for the last 18 years), and setting off the magical equiva-

lent of one megaton nuclear bombs. Fortunately for Brandon, Malcolm doesn't consider him to be a threat yet, so when he appears it's generally just to taunt Brandon about his lack of dress sense. However, this won't last for long, Malcolm may tire of Brandon or begin to take him seriously. When he does, Brandon's going to be up to his neck in the brown smelly stuff.

## STOP MONKEYING AROUND

*Kyrandia* is a graphic adventure very much in the *Monkey Island 2* vein. Most of the screen is taken up by the action window, below which is a message window, inventory, space for the amulet and the game options icon. You control Brandon using the mouse in a point and click fashion. This interaction is incredibly easy to get used to. All it requires is for you to point to a particular part of the screen, click and Brandon will walk there. If you point to an object that is more than simple background decoration, the pointer shape will change and items can be picked up, information gained, or conversations started. It really is that simple.

This ease, however, belies the usefulness of the system and the depth of gameplay. Games of this character really need this type of

control system, as the player will usually have all his work cut out just figuring out how to solve the various problems, never mind trying to get to grips with complex icons. Another excellent feature is the ability to tweak aspects of the system so that some things can be speeded up, including conversations and even Brandon himself. This gets the game moving at a fair old pace, even though our hero tends to look and move like a Thunderbird puppet on amphetamines.

## EYE TO EYE WITH THE BEHOLDER

The main screen graphics are a sight to behold, but then what else would you expect from Westwood Studios, the developers that brought you *Eye of the Beholder II*. Attention to detail seems to have been the watchword for those guys. *Kyrandia* breathes detail down to the smallest level. Backgrounds are colourful and add so much to the feel; though it is here that one gripe can be levelled – a little more thought could have been put into the woods as the backgrounds do tend to become a bit repetitive.

The main character animations deserve a mention all to themselves. Brandon moves smoothly through his world, and all the non-player

Brandon's quest is near its end — here he is at the gates to Castle Kyrandia. They don't half look imposing and those gargoyles are giving him a hard stare, perhaps he should knock and wait... nah!

Should Brandon take a peek inside this dark, dank and dangerous looking cave? Better save the game before setting foot inside.

Left: Brandon returns home to find grandad doing his best impression of a statue. Better keep him indoors and away from the pigeons until Brandon can find a cure.

# OF KYRANDIA

characters that he meets, both human or otherwise, have the same quality to their actions.

Magic is a very important aspect of the game and possibly one of the hardest things to visualise. Many developers would have taken the easy option and left it out or had a simple switch from one situation to the next, not Westwood though. Brandon encounters, and has to use, magic at many points in the game, and each time the effects of it are beautifully animated. These even include transformations, when Brandon flawlessly morphs from human to... well, buy the game and solve it yourself!

## STUCK FOR CLUES

The puzzles in *Kyrandia* aren't too hard to solve. Some can be figured out very quickly indeed, others will take a while longer, but on the whole they are all quite logical. The solutions, when they do come, will have you saying 'Of course', as opposed to 'How the hell was I supposed to figure that one out?' (or some other polite curse for the programmers).

Conversations play an important part of the puzzle solving, with non-player characters setting tasks and offering all sorts of tips to our intrepid hero. The speed of text on screen can be increased, which is a boon

because the conversations are not really interactive with Brandon himself providing the responses, not the player. Also, once started, conversations have to run their course, which can be a tad frustrating if you have already had the same one not five minutes before.

Fortunately, these conversations are laced with humour, especially when Malcolm shows up to taunt Brandon. This touch helps give all the characters a certain amount of depth. For instance, Brandon will encounter a pet dragon later in the game which has given up eating knights due to the fact that it found them all sweat and muscle and too difficult to peel!

## DIE LAUGHING

The humour can be very sharp at times, as unusually for the latest generations of this genre, the hero can die in a number of intriguing ways. If you compare *Kyrandia* to the other recent graphic adventure, *Curse of Enchantia*, you'll see what I mean. In *Kyrandia*, if a situation looks dangerous and possibly deadly, it usually is. This means that frequent saves are necessary to preserve Brandon's wellbeing. However, if you want to try his luck then I suggest that you do, if nothing else he dies in a variety of amusing ways.

## TOUGH COMPETITION

When you think that it's competing against the likes of *Monkey Island 2* and the soon-to-be-released *Indy IV*, *Kyrandia* certainly has a lot to live up to. The graphics match up fairly well, as does the sound. The puzzles in *Monkey Island* tend to be slightly harder and therefore add to its longevity; *Kyrandia* can probably be solved in less time. The playing area is immense though and will take some time to explore fully; given Brandon's ability to only carry 10 objects, it is advisable to find locations to stash goodies that will be needed later.

Unfortunately, *Kyrandia* comes on NINE disks and is NOT hard disk installable. Whilst it's true that *Monkey Island 2* came on 11 disks, you at least had the option to put it onto a hard disk — not so with *Kyrandia*. This seriously detracts from an otherwise very enjoyable game; let's face it, your poor old floppy drive is going to take some hammering playing this one. Why isn't it hard disk installable? There is one hell of a lot of disk swapping involved, which is going to have you suffering from swapper's wrist in no time at all.

Apart from this moan, *Kyrandia* has a lot going for it. It's certainly worth checking out.

### HOW TO ORDER

Simply telephone through your order, giving your Access or Visa card number, or send a cheque or postal order to your local shop.  
**MAIL ORDER Phone 071 580 4259.** Prices include VAT unless otherwise stated.  
**Minimum Courier Service £17.63.** (Corporate Sales, any order under £250 subject to £10.00 Admin charge) Allow 10 working days for cheque clearance. Bankers drafts clear same day. All prices are correct at time of going to press but are only valid until the 10th day of month of publication due to magazines coming out four weeks earlier than issue cover date.

### THE DIAMOND PRICE PLEDGE

If, whilst buying goods from us, you can show us a better price for the same goods in stock with one of our UK competitors then we will match it.

Even if our prices have increased we will honour the price in this advertisement on items in stock as long as you bring this advert with you.

This pledge applies only to customers relying on this advertisement before the 10th day of the month of publication. It does not apply to competitors prices offered in closing down or stock clearance sales.

# small tips

It's not the winning that matters, it's the taking part....!!! Oh, yeah? To add some gamesmanship to your gaming, peruse CU's treasure trove of tips, its horde of hints, its... well, you get the picture.

## AMAZING SPIDERMAN

A useful tip which also answers query X2 from the Helpline a few months back. If Spidey is feeling a little down, help the web-slinger out by typing 'GENERIC' on the high score table. To replenish the wall-crawler's energy level, press the Help key during play.

## BUBBLE BOBBLE

If you're still boggling at BB, press F1 to advance one screen, or F3 to skip six screens, then F3 again to leap forward a mighty 11 screens.

## DRAGON BREED

In this action packed shoot 'em up, it'll be no surprise if you find yourself in need of a cheat or two. For infinite lives, pause the game and enter 'IREM'. Pressing 'N' will now zap you to the next level. If you prefer, you

may also skip levels by holding down the left mouse button, Delete and Help keys when you finish a level. The screen should then flash — simply press any key to skip.

## DOUBLE DRAGON 2

If this dynamic duo, with more chops than an abattoir, are making heavy weather of their rescue mission, here's how to help them out. Start a two player game, then press both fire buttons and the Esc key. Bingo! The kung-fu kids now have infinite credits (although the final punch-up may become more tricky).

## GUY SPY

If you're tired of playing and just want to see the story unfold, type 'GETVONMAXGUY', hit the enter key, and then press F1. The eponymous hero will now hurry through the tests awaiting him, towards his final confrontation with the evil criminal genius, and still be home in time for tea. Hurrah!

## JUDGE DREDD

If Old Stoneface is being given the runaround by those drokking perps, then here's a cheat to allow enhanced law-enforcing in the Mega-City's mean streets. When logging onto the computer, use the

name 'DREDD', then type 'BRUCKEN PLAYING HERO-QUEST' before exiting. Stomm! The Help key will now whisk you to the next level faster than an H-Wagon bouncing on Boingg.

## MEGA-LO-MANIA

The level codes which will let you time-travel through Sensible Software's epoch-spanning game include the following:

2nd Epoch: BNYAB-

DUNBHV

3rd Epoch: COVCPMJVEBL

4th Epoch: WKCCHEUKNL

5th Epoch: GATAVRXRONT

6th Epoch: WWKDXGPXDBZ

7th Epoch: KUUCTOPLGHV

8th Epoch: PEHAJBPKZQA

9th Epoch: GYJDJHPNFHN

Mother Battle: TJLBVSNNIGD

## PRINCE OF PERSIA

If you're getting panned in the sand, help your arabian knight by holding down the caps lock and pressing 'L' to skip levels. There is one fly in the ointment, however: this dodge won't

work on the bottle section which begins the second level.

## SPACE ACE 2

Another cheat for anyone fed-up of playing and just wanting to watch. Typing 'HURRYDEXTERO' (the last

character is a zero, kids, not an 'oh') will make the game run its course unaided while you sit beside your Amiga like a spare part.

## TEST DRIVE

If your road holding is proving woefully inadequate, stop plummeting from the cliff by holding down the fire button and gliding round those corners in comfort. Vorsprung durch Technik!

## TEST DRIVE 2

To leave the opposition choking on your exhaust fumes, type OUTRAN and you'll find yourself ahead of the pack. If that's not enough, enter AERF to double your acceleration. Typing GASS will propel you to the next service station (which is an awfully long leap if you're racing on the M1).

## VENUS THE FLYTRAP

Menaced by the midges? Bothered by the bluebottles? Bugged by, well, bugs? To help your (fly) swat team in this insectivorous shoot 'em up, type in the following access codes:

Frozen Wastes: Mantids

Dead City: Cicadas

Wood World: Psyllids

Pierids: Kaverns

Death Valley: Satyrid

Creeping Swamp: Lycaenid

Tech World: Pyralid

Translucent Plants: Noctuid

Your anti-creepy crawly kill-power can be enhanced by typing 'MARS', 'MERCURY', 'PLUTO', 'JUPITER' and 'SATURN', giving you extra weapons and other neat stuff. Now buzz off and start playing.

## Z-OUT

Although it's a ferocious blaster, this game contains a couple of really simple, but highly effective, cheats. During the game, press 'J' then keys 1-8 to skip levels. If you press 'J' and 'K' at the same time you will receive an unlimited number of lives.

## ZOOL

A devastating dodge with which to help the ninja of the nth dimension in Gremlin's lavish platformer has winged its way to CU. Z. Jaffer of Peterborough wins a Microprose game for the blue chip cheats that follow.

When the game starts, rather than press the spacebar for the options screen (or the fire button to get straight into the action) wait for the high score screen to appear. Type the word 'GOLDFISH' and press enter. The function keys (F2, F3, etc.) will now transport Zool to the level with the corresponding number.

Once play has begun, press number 1 to make Zool invincible — you'll know when this has happened as he'll flicker white.

Tired of the current level? Just

press 2 and zip to the next portion (from 2.2 to 2.3, for example), or if you really want a change, number 3 will take you to the next complete level. But remember, you'll need to press number 1 on each level (or part of a level) if you want your hero to remain indestructible.

Finally, if life's too easy with an immortal Zool, hit number 4 and see the little chap explode into oblivion, just like he used to do.

## and ADVENTURE HELPLINE

Welcome to the chilling world of adventuring. Gather round and listen to Tony Gill, keeper of this dank corner of the magazine.

### RULES OF THE HOUSE

Tobacco pipes must only be lit with normal flames - No Fireballs!

The hearthstone must not be used for sharpening weapons.

Thieves and pickpockets must contribute 10% of all takings to the Inn Keeper.

No spitting in the soup cauldron.

Dwarven jewelry bought and sold. Ask at the bar for details.

By Order of: The Inn Keeper.

### HURRY INSIDE

Listen! Did you hear that noise? No, not the noise of the wind, I think it sounded more like a groan of pain. Over there in the dark corner of your room I think I saw something move. Is there someone, or something, there? Could it be that all you have believed in is the dream, and the nightmares are the true reality?

As the light from the window fades, and the long evening shadows rise like corpses from beneath the tall trees and crawl around the house, the world of logic and science grows quiet and powerless before the onslaught of the night. In the dimming light your street clothes fade into rough-spun cloth and your soft comfortable shoes transform into mud-splattered leather boots. The walls around you dissolve like dirt on glass and a

rush of damp forest smells, chilled by the night wind, swirl around your head.

Here is the real world of adventure and mayhem come to claim you for its own. And from where can you seek help and solace? Where can you run to and find safety? Why, to the Troll's Head Inn of course.

Well met traveller, and welcome to the Troll's Head Inn. Here you can drink a tankard of ale at the bar and listen to the rumours of all that's happening in the world of Role Playing Games and Adventures. You can peruse the Heroes Wanted Board for details of the newest and most exciting quests requiring volunteers and party leaders. Perhaps you just need a little help from the Shrine of Knowledge. Whatever it is you seek, you're sure to find it here in the Troll's Head Inn.

If you like monster-stomping in gloomy dungeons, then *Shadowlands* from Domark may be just the RPG you are looking for.

## SHRINE OF KNOWLEDGE

Away from the noise and laughter which fills the bar, there is a shady corner where a red velvet curtain shields the Shrine of Knowledge. It is to here that the humble and the penitent come to seek help with those quests which have brought them to their knees. Draw near and listen, so that you too may profit from the Font of all Wisdom.

### BARD'S TALE III

Crawford Mackay from Edinburgh is having trouble with *Bards Tale III*. He is stuck in the 2nd dimension Geldia, in the dungeon below the Ice Keep, at the tomb of Lanatir where a sign reads, 'Here lies Lanatir, last guardian of all magics. Only in the name of his blood may you enter.'

The Shrine replies: Keep calm my son and the word will eventually come to you. For a 'CALM'

### HEROES WANTED BOARD

Dear Innkeeper, please pin the following information concerning an Adventure Probe Bulletin Board to the Heroes Wanted Board in the Troll's Head.

Adventure Probe BBS (0707 323403)

Fidonet: 2:252/309.1

AmigaNet: 39:137/1.1

Online 10pm til 7am, 7 days a week.

Scrolling 8-N-1, all speeds 300 to 14400.

Sysop: Bob Adams

Hardware: Amiga 500 with 5Mbyte, 52meg HD,

SupraFaxModem V32bis

Software: TransAmiga.

The bulletin board has been running nightly since June 1992. The idea was to set up a bulletin board dedicated to adventurers, by providing solutions, hints, tips and maps for either reading or downloading. As these are mainly text files, it has meant that the features are accessible to all makes of computers. Starting with about 400 solutions, the file areas have now grown to include complete Public Domain adventures for both the Amiga and Amstrad CPC. Other formats will be provided if there is sufficient demand.

The BB also caters for the non-adventurer by including features expected to be found on a BB in 1992. The Adventure Probe is part of two world-wide nets, FidoNet and AmigaNet, and 30 echoes are available for reading and writing to by users. Online games are provided and new games will be added as they become available. The BBS is free of charge and new callers are welcome. Bob Addams, 81 Uplands, Welwyn Garden City, Herts.

### SPACE HERO REQUIRED

A fearless hero is required. Do you have more guts than the average warrior? Can you endure more pain than the human mind can withstand? There is a quest entitled *Plan 9 From Outer Space*, which contains something which no man has been able to endure. No, it is not the quest which is so unendurable, but the video which comes with it! Gremlin Software have taken the movie, which has consistently won the Golden Turkey Award, and bundled it with an adventure game of the same name. So far no-one has claimed to have watched all of this video in one sitting and every aspiring hero has succumbed to trips to the outside loo or the 'barf' bucket for 'comfort' breaks before the final scene. No-one knows for sure how good the actual adventure is, for nobody seems to be able to speak of the experience when they return.

There must be a hero out there somewhere who is prepared to take up this task!

If you got onboard this boat expecting to have a jolly trip around the lighthouse, then you are in for a shock. The waters of *Knightmare's* dungeon are more dangerous than shark-infested custard.

mind is a clear one. Search for the Wand of Power and the Sphere of Lanatir in the south-east corner. Once you leave this accursed place return to the Well Worn Spot and then cast ECUL to whisk yourself off to the Wilderness.

### LURE OF THE TEMPTRESS

In the chilling Norwegian wilderness, Gaute Zakariassen is stuck in *Lure of the Temptress*. Having managed to get into Taidg's house and light the apparatus, he doesn't know how to make the transformation potion. He thinks his next move should be to get into the Herb Shop, but how? In his inventory there is some broken glass, knife, diary, bottle of sewage water, tinderbox, lockpick and some money.

The Shrine replies: Poor old Taidg the

Magician had already assembled all that was needed to prepare the transformation potion before he was arrested by the Skorls. All you need do is read the diary and then examine the apparatus carefully to find the oil burner, the flask and the tap. Use the tinderbox on the oil burner and then use the flask on the tap. You will be taking a trip to the Herb Shop later, but not until you rescue the fair damsel who is even now suffering at the hands of the cruel Skorls.

## OPERATION STEALTH

*Operation Stealth* is causing Lee Robson from Northumberland some problems. So far, he has managed to rescue the girl and get through the mazes, but he's stuck in the office of the Palace. What does he do?

*The Shrine replies:* Seek the statue which stands in this room and 'operate' it's arm. A safe will appear which will not open until you use the small box which you found in the bank. Operate

the on/off button to first switch on the box. Now operate the up/down arrows until the first light on the box lights up. Operate the validation button on the safe. Operate the up/down arrows again until the second light illuminates and then operate the validation button on the safe. Repeat this cycle for the third and fourth numbers. Switch off the box and 'take it'. Operate the validation button on the safe once more and it will open.

## EYE OF THE BEHOLDER II

On the third level beneath the Temple of Blackmoon stands John Grills of Belfast. He has been enjoying playing *Eye of the Beholder II* immensely, but has become steadfastly stuck within the confines of its dark dungeons.

There is a room with nine pressure pads on the floor. The writing on the wall says that he must leave many valuables behind. He knows that he must place weights on the floor pads in a certain pattern – but what is the correct combination?

*The Shrine replies:* Consider the common gambling dice and look upon the face which represents the number 5. This is the pattern which will open the distant door and reveal both rewards and danger. Take this advice. Make your own body be the weight which depresses the central spot. When the first of the many demons bounds forth from the room beyond, you have but to step to one side and the door will close on the monster's companions. In this way you may bring forth the demons one by one and slaughter them as ye will.

## BARD'S TALE II

Steven Clarke from Derby has reached Level 3 of the Dark Domain and is in a room where a voice tells him to, 'Speak the word to pass.' He assumes that this is the guardian to level 4 speaking, but has not found a word anywhere. Do you know

where to find the password?

*The Shrine replies:* Do I know the password! Of course I know the password. Do you doubt it for a moment? The answer is contained in the question, and it is but a foolish jest of a simple demon. The word is PASS. A tiresome joke, but one to drive men mad. There is another magic mouth upon this level which will ask you, 'Who is Master of the Mind?' You may be tempted to say, 'The Shrine' (and who could blame you?), but the word it seeks is MANGAR.

## DUNGEON MASTER

Desperate adventurers come in all shapes and sizes, as evidenced by Margaret. Between looking after two children and doing a full-time job she has been playing *Dungeon Master* for the last three months and loves it. Having managed to get to Level four, she faces an iron gate blocking the exit. She has tried magic and brute force, and has even blown the Horn of Fear in desperation. She can't find any hidden switches, and has even tried to put the gold coin in the mouth on the wall, but all to no avail.

*The Shrine replies:* I would have thought that anyone capable of rearing two children and doing a full time job, would be capable of solving *Dungeon Master* with one hand tied behind her back. I am not convinced that you are on Level four, for there is no locked door leading down to Level five. On Level three there are six locked gates, one after the other, which block the way to Level four. Level three has six cryptic rooms each containing one key, e.g. Chamber of the Guardian, The Vault, Time is of the Essence etc. The exit from Level four is past a captive Mummy, (sounds a bit like you!) who is standing next to a sign which says, 'This is my prisoner. Let him suffer.' The Mummy is standing on a pressure pad which controls the locked door at the end of the passage. Killing the mummy

If you get tired of strolling the the endless forests of *Ishar's* RPG, then there are also a few dungeon entrances to explore.

opens the door to Level five and releases the pink worms. These pink worms are VERY difficult to kill. Use throwing weapons before they get near and then fight as you retreat to a lockable door.

## HOUND OF THE SHADOWS

*Hound of the Shadow* is causing M. Giblin problems. He has reached Blythburgh and created a Homunculus, but come midnight he is chomped by the Hound.

The place seems rich in clues: the details in the church, the gate to and from London, the locked door in the pub and the mysterious little postmistress who isn't being terribly helpful. Is he being thick or is there some obscure command he hasn't thought of?

*The Shrine replies:* Yes, would seem to be the answer to both questions, but I assume you would wish a more elaborate answer. There are three alternate ways of finishing this game, and as you seem determined to make things difficult by not helping I can only give general hints. When you have made the Homunculus, you wait, then drop it. Oops! You then finally meditate.

However to go back a stage, assuming you have been to the Reading Room and read Bridewell, then you return home and go into the attic. Use the gate and then examine the headstone and the symbols. Return home and go to the bookstore where you can read the journal. You can ask the postmistress, and when she won't help, persuade her until she gives you the address. You can get water from a chamberpot under a bed in a rented room. You can get mercury from a thermometer in the lounge. You can write to Paul Mason.

## BLACK CRYPT

Gary Coggon from Doncaster has given in and is pleading for help. Having been determined to complete *Black Crypt* by himself he found himself unable to beat Estoroth on Level 28. Freezing his soul, hammering his head and cutting his cloth seem to have no effect.

*The Shrine replies:* To have come so far and now to abandon hope when final victory is in your grasp betrays a lack of moral fibre, my son. You can do it, you only have to believe you can do it. Weaken Estoroth by hitting him until the artifacts glow. Then use the magical abilities of the Protector, Lifestealer, Vortex and Force Hammer in that order to destroy Estoroth. Finally, you will be able to travel north into the teleporter and claim the treasure. In the early versions of this game the Force Hammer had been made too powerful and you became invincible. Perhaps you are just too weak of spirit to claim the final victory?

## CAPTIVE

Whilst playing his new game, *Captive*, Gary Morpheus from Dunstable is stuck in the first room of the space station on Planet Butre. In the room there is a note and some explosives.

*The Shrine replies:* There is one wall in this room with what looks like ball-bearings on the bottom. You can push walls like these out of the way by simply placing the hand icon in the centre of it and clicking the 'Right' mouse button.

## LAST ORDERS, PLEASE

And now I fear I must ask you to leave, for the Inn is closing. The sky is lightening towards the east and soon the dawn will be here. The terrors of the night have shrunk back into that dark place at the corner of the mind, and there they will stay until the dark returns again. Be on your guard and keep your face turned towards the wind. Good luck my friend, 'til we meet again.

In the little village which huddles beneath the shadow of Temple Blackmoon, the yeomanry keep the lights on and the shutters bolted.

If you have a problem, a notice for the Board, or perhaps a piece of scandal which you wish to whisper in the Inn, write to Tony Gill at: The Troll's Head Inn, CU Amiga, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU

# BEAST III

**Shadow of the Beast III, 'Psygnosis' sequel to the sequel sees Aarbron (our hero) guided toward his final confrontation with the evil Maletoth by a vision of the venerable Rekann, former royal magician. With the help of CU Amiga, Aarbron senses Rekann's wise advice steering him more precisely than before...**

## NOT OUT OF THE WOODS YET?

'Hear me, Aarbron! When thy quest begins, in the Forest of Zeakres, thou wilt assuredly realise not to allow the slime-spewing plants to splash you with their purple gunge. Using the lever-operated lift and the wheel-controlled platform will be simplicity itself for one of thy abilities.'

*'No problemo, Rekann. Then what?'*

'Thou need not be told twice to collect as much gold as possible and kill every goblin that gets in thy way — see those body parts fly! Gather the grenades and use them to destroy the floating gun turrets. Remember that grenades are more powerful than shurikans, but thou hast only a limited supply, so use them wisely.'

*'Gotcha! What next?'*

'Pick up the key and nip back (down and leftwards), to make sure you have missed no gold (hint, hint). Go back to the fourth platform, rise with it to the top, then run right. Fight thy way through the hordes of goblins, jump down, and keep going right until thou see meat on a spit.'

*'A kebab?'*

'No, it's not quite that bad. Shoot it until it falls to

It's a good job that this beast had a prior pressing engagement, otherwise Aarbron might not have lived this long.

Roll out the barrel! A tun of trouble heads towards Aarbron. Deft use of a shuriken and the joystick will ensure that he lives to face the next monster.

Goodness gracious, crate falls: admire! Aarbron packs punch as he pitches a packing case into the perilous pit.

Aarbron casts a mighty shuriken towards a poor, defenceless packing crate. Maybe he had a bad experience with a cardboard box as a child!

Surfs up, dude! Aarbron practices his famous walking on water trick before a crowd of one. Maybe he has allusions towards god status?

the ground. Push it to the right. Thou will find another key and must pick it up. Leave the meat under the spiked block swinging just above thy head.'

### 'Gulp!'

'Run left and unlock the door of the cage holding the hideous creature (don't let the goblins jump you from behind while doing this). Once the door has opened, jump onto the ladder and climb like billy-o, if thou wants to avoid a mauling.'

### 'Ob, I most assuredly do!'

'The monster, desperate for fast food, will seize the meat and be crushed by the spiked block falling upon it - you've got to laugh! Next, ascend the jet platform and journey to the left. Stand in the middle to keep it level, and collect a rock as thou rise. Push the rock onto the weighted platform once the lift has reached the top. Jump after it, then, when the platform comes to a halt, leap across the gap. Run up the hill, shooting the metal spikes. Cross the bridge and stand at the edge of the cliff. This will crumble beneath you and thou will fall to the ground with the rocks.'

### 'You've gotta be kidding!'

'It gets better. Go left and defeat the red demon, Louq-Garou, by jumping and shooting when he fires at you. Take the fiend's skull when he is defeated'

'Sounds a bit ghoulis, but you're the boss.'

## DOUR NO MORE!

'Now, Aarbron, thou art before that place of dread, Fort Dourmoor. Lower the drawbridge by shooting the switch, retrieve the wheel, and use it to mend the battering ram. Pass through the door to the right and shoot the trampoline from which the falling balls bounce towards you. Stand upon the large trapdoor, then bag the bats which escape behind you.'

### 'Easy enough so far.'

'Now it gets tricky. Return left and deliberately fall into the small pit. Smash the gold block, jump through the big trapdoor, and slide down a chute. Run to the right, hurdle the table, and then push it back to the room thou hast just left. Get on the table and shoot the switch on the left. You will then be on a high table as the room fills with water and it floats upwards: shoot the switch on the right when it has finished its ascent. The water will then drain away, when it is less than head height, run right and climb the ladder.'

### 'Piece of cake.'

'At the top, turn right and push the table to the edge of the gap. Stand on it, near the edge, all the better to hurl shurikans at the bloaty green bloke lobbing barrels. Once thou hast despatched him, get off the table and push it into the gap. With a running jump thou must then leap the gap, get behind the large crate, and push it until it, too, falls into the pit. Take another running leap to get back to the platform from whence thy began and descend the ladder.'

### 'Is all this work really necessary?'

'Need thou ask? Thou will see the crate, on the table, floating in deep water. Destroy the crate and cross the pool by stepping on the planks and the table. On the other side, fall into the pit. Hurdle the barrel, then another pit. Thou must fire and dodge with utmost dexterity to destroy the red monster that will endeavour to cast thee into the abyss with a crane. After it is defeated, push the barrel to the edge of the gap, then use the crane to place the barrel atop the right-hand side of the conveyor belt above thou.'

### 'Pbaw, I'm earning this gold, aren't I!'

'And then some! Climb down the ladder, close the trap door on the left, but leave the right-hand one open. DON'T shoot the monster - I know you'll be getting shurikan-happy by this stage, but try and restrain yourself. Next, climb to the top of the ladder and turn right. You will soon find yourself face to stump with Pendek, the headless mace-monster. Kill him by jumping and ensuring that he gets it in the neck with a shurikan. Collect the spiked head of his mace once he is dead. Move left, avoiding the swinging ball, for more gold. Back to the ladder, climb down some of the way then jump into the barrel.'

### 'You're not sending me over Niagara Falls are you?'

'Not exactly. Trigger the switch on the right, then pull down to shut the barrel's lid. When the barrel stops moving, jump free and go to the left.'

## It's A Whole New Board Game.

It's taken 700 years for chess to take on a whole new dimension and now it's here .... Direct from the USA this challenging and exciting boardgame is the ultimate in logic and cunning. 2 or 4 players compete

with a full set of chess pieces with the object of gaining control of the centre of the board. Strategy, wits, ingenuity. You need them all to overcome your opponent.

It's ... a whole new board game.

DRAUGHTS SET ALSO INCLUDED

BOARD DIAMETER 53CM

**HOW TO PLAY:** Chummy chess can be played by 2 or 4 players on a specially designed game board. Each player plays with a complete set of 16 chessmen. Chessmen move in the same manner as done in the traditional two person game, and can also be moved in circular directions. To win the Quest, a player's king must gain control of the center of the game board; or that player must checkmate and capture all of the opponents' kings.

**INTRODUCTORY OFFER**

## Plants For All Seasons

This detailed reference work is designed for gardeners, botanists, and multimedia enthusiasts.

You can create your own selection criteria using any of the fields of information in the databases. Your criteria can then be named and stored to disk for later use when required.

Database entries for over one thousand plants have been included as standard together with more than one hundred high quality HAM pictures. Facilities are available for the storage and management of pictures, sounds, videos, texts, and objects for use in ray tracing and design systems.

Each plant can be described in great depth over twenty pages of fields.

The main areas covered are: associations and applications, blossom, buds, cultivation, environment, external files, finance, flowers, foes, friends, fruits, growth, leaves, origins, reproduction, roots, runners, seeds, stems, and tendrils.

A powerful selection system is available for you to access groups of plants from the system. If you need to select only plants which have red leaves and white flowers in June, and are pollinated by moths, then you can!

This is a huge active project. We would like enthusiastic owners to help us to expand the system by contributing to the databases in return for royalties. Please call for more information.

Educational establishments may like to know that site licenses are available, and that A.R.K. can take Purchase Orders from recognised bodies.

Owners of Superbase Professional 4 can access the databases directly from their own programs. Plants For All Seasons is supplied with a Superbase Run Time Module (C) Oxxi Inc.

The software is supplied on ten disks which are accompanied by a comprehensive manual and registration card. The disks are not copy protected. A Microsoft Windows version is planned for 1993.

Applied Research Kernel, Corve Farmhouse, Corve Lane, Chale Green, Isle Of Wight, PO38 2LA, U.K.

As the sun sets on yet another day, Aarbron won't be rising to see the next one. He obviously decided not to follow Maletoth's instructions to the letter.

## THE HIGHEST BIDHUR

Pass the monsters on the bridge by going right. Defeat them by jumping and shooting them in the back [What a hero – Ed.]. Go right, and climb the

so, grab it and fly back to the topmost cave. Get off the bird and hurry right, through the gap, taking care not to be squashed flat by the falling slab. Take hold of the hammer and shove a metal ball to the left edge of the small pit. Next, shoot the slab until it rests upon the ball. Move the slab to the right by placing a ball in front of it each time one becomes available at the rear.'

**'Wow! It'll be just like building Stonehenge!'**

'Once the slab is at the right of the pit, throw the hammer at it until it moves no more. Armed with the shurikans once again, climb the slab, then hop onto the higher platform. Head right and kill the critter waiting for you with a few well-aimed throwing stars in the eyes. Enter the laboratory and take the empty glass flask. Return to thy bird-brained helper and fly to the cave below the one thou hast just departed. Wing thy way past the bouncing balls to the shore of the red lake. Climb off the bird, get the flask to hand, leap into the inviting fluid, and fill the vessel as easily as flinging a shurikan. Bingo! Thou now hast some of the Quintessence of Being!'

## BURNING DESIRES

'Having reached Nosthomak...'

**'Bless you!'**

'...hurry right, but mind not to get burnt by the flamethrower as it blazes away at thee.'

**'You what??!!'**

'Keep thy hair on. Pass the steel ball, and descend the stairs. Shoot the left leg off the table and push it right – but don't get too close to the edge. Eliminate the bats, then push the bookcase left until it is beneath the library notice. Climb the ladder, get on top of the bookcase, and hop up to get the hammer. Then, return to the steel ball.'

**'Don't tell me, let me guess: I fire a few throwing stars at the ball to get it swinging, then add some oomph by whacking it with the hammer.'**

'Well done. Next, jump onto the ball as it swings towards you, before leaping off when it reaches the top platform on the right. When the ball next reaches the highest point of its swing, shoot some shurikans at it until it falls off and rolls down the stairs. Thou may then amuse thyself, as thee walk right, by solving the picture puzzle and learning a fishy food-chain. To cut a long story short, however, let's just say that to pass through the fish tanks ahead of thee, thou must relocate some of the inhabi-

tants with the crane beside them.'

**'Are you sure this isn't a red berring?'**

'Take the first fish from tank one to tank three, then go back and forth taking whichever fish has just eaten another. Feed the last such fish to the shark in tank two – the dear little thing wouldn't dream of hurting you. Move to the exit panel and shoot. Then climb the ladder and go through the tanks, taking care not to get spiked as you do so. Descend the ladder beyond the third tank, and fall down the gap to the right.'

**'Ouch! How much more of this?'**

'Hop over a ball, down another ladder, leap a pit, jump to a ledge and you're almost there. Switch on the furnace, move closer, hammer in hand, and pound it until it will move no further right. Throw a couple of shurikans at the spikes hanging from the ceiling. When the chain supporting them starts to crack, hurl hammers at the spikes until they swing vigorously. As they reach their highest swing to the left, shoot the spikes with some throwing stars so that they fall down and cover the pit below.'

**'I sense the decisive moment approaches.'**

'Indeed. Return left, and up the ladder. Hurdle the ball and push it into the furnace. Stand on the platform beside the furnace switch. When the block of ice has melted so much that it is below thy level, jump onto it before leaping to the ledge on the right. Turn the switch in order to disable the force field beneath thee, and wait for the molten metal on the floor to cool. Hop down, gather up the first Crystal of Hodag, which is lying on the ground, go right, and shatter the ice block containing the other crystal. Catch it as the ice breaks.'

**'And now for Maletoth?'**

'Now for Maletoth. Run and leap onto the platforms. When the arch-fiend appears, fire repeatedly at his monstrous head. Switch platforms every time he passes you.'

**'Thanks for the tips, Rekann. Okay Maletoth, I'm on my way – Kara-Moon ain't big enough for the both of us!'**

tree by jumping onto the first branch. Move to the right, but face left before jumping up the branches and shooting the nest and birds.'

**'Something tells me you're not an ornithologist.'**

'Run right and leap away. Keep on running (as the song says), but when thou seest a table, hack away its left leg. Jump over it, then turn and shoot off the right leg. You now have a handy see-saw.'

**'A see-saw? What is this – kiddies' corner?'**

'Listen, ignoramus. Get behind the head peering from the rocks and shoot it so that it falls onto the left end of the plank. Push the plank (and head) as far left as possible, ascend the ladder, then jump off the ledge to your right. When you hit the plank you will catapult the rock upwards, hitting the cage and releasing the bird. Stand in front of your new-found feathered friend, and fire away to get on its back. Then fly diagonally up and to the right.'

**'You've been reading too much Tolkien!'**

'Silence. Before you is a column of metal balls and a set of runners. Adjust the runners so they will direct the balls into the top cave. Release just three balls by flicking the switch at the top. Then, direct the runners to the cave below and allow the remaining balls to fall into that. Fly down the shaft to a chamber. Head right and kill the birds.'

**'You're really not an ornithologist, are you.'**

'One of the birds will drop a hammer. When it does

## CHECK OUT DIEGO'S TOP 10 Christmas Supersavers

**1**

### CHEETAH CHARACTERSTICK JOYSTICK

The perfect gift, available as either:

- ★ Batman Returns ★ Terminator 2
- ★ Alien 3 ★ Bart Simpson

Complete in movie set gift pack! ONLY **£8.99**

**2**

### TAILOR MADE AMIGA 500 DUSTCOVER

A steal at just... **£1.99**

**3**

### DISK ACCESSORY PACK

- ★ Box of 10 branded precision disks
- ★ 40 capacity lockable disk box
- ★ 3 1/2" disk drive cleaner kit

ALL FOR ONLY **£8.99**

**4**

### GFA BASIC (RRP £49.95)

Essential for programming

**£3.99**

**5**

### 6mm QUALITY MOUSEPAD

At this price you can't go wrong

**£1.29**

**6**

### SEGA MEGADRIVE

Basic console with joypads & p.s.u.

**£99.99**

**7**

### ZIPSTICK SUPERPRO JOYSTICK

Simply the best autofire joystick on the market

ONLY **£9.99**

**8**

### ASTRA TEN GAME PACK

- ★ Datastorm ★ Dungeon Quest ★ E.Motion ★ Grand
- ★ Monster Slam ★ Powerplay ★ RVF Honda
- ★ Shufflepuck Cafe ★ Soccer ★ Tower of Babel

ALL 10 GAMES FOR ONLY **£14.99**

**9**

### CARTOON CLASSICS GAME PACK

- ★ Bart Simpson ★ Captain Planet
- ★ Lemmings

**£14.99**

**10**

### AMIGA 1.3 BUSINESS PACK

- PRO WRITE 2.5 (Wordprocessor)
- MAXIPLAN (Spreadsheet)
- INFOFILE (Database)

ONLY **£24.99**

## HOW TO ORDER

Call us NOW on

**0234 214212**

Send Cheque or Postal Order to  
**DYNAMITE COMPUTERS**  
Dynamite House,  
44a Stanley Street, Bedford  
MK41 7RW

NB: Please write cheque guarantee card number on the reverse of cheque to ensure same day clearance (cheques without card number subject to 10 day clearance).  
Call into our showroom for a fast and friendly service

Retail/Queries **0234 364428**

### DELIVERY CHARGES\*

£2.95 for orders less than £100

£4.95 for orders over £100

Next day express service £7.50

Saturday delivery only £15.00

\*Charges applicable to UK mainland only

### PLATINUM SERVICE CARD

Only **£19.99!**

### Features:

- Next day courier delivery
- 30 day exchange for new
- 1 year guarantee giving free collection and delivery should a fault occur

### TERMS & CONDITIONS:

- Price pledge only applicable to individual items over £50 where the price differential exceeds £1.
- Price pledge applicable to goods on a like-for-like basis and currently stocked by competitor.
- Gift voucher may not be redeemed for cash. May only be used in future purchase where normal delivery charges will apply.
- Goods all subject to availability, E&OE.
- All prices subject to change without notice.
- Platinum card is non-refundable and covers only one item.
- This does not affect your statutory rights.

**Is the A1200 a brave step forward, too little too late or just a betrayal of the loyal Amiga-buying public? Nick Veitch puts it to the test.**

# A1200

## WHAT DIFFERENCE?

If you haven't seen it in Dixon's yet then pop down and have a gawp. There's not much difference between the A600 and the A1200, except the latter is slightly wider, having to cope with – gasp – the return of the keypad.

Internally though, the new machine is very different. The whole custom chip architecture has been upgraded to the new AGA standard, discussed in greater detail in last month's A4000 review. Basically, the changes are all to do with the graphics modes. The AGA chipset supports all the resolutions available under ECS (as found on WB2.0 machines) but with a standard colour resolution of up to 256 colours from a palette of 16.77 million. This means that there are now 8-bitplanes of data to play with instead of six.

There is also a new HAM mode which gives a total of 262,000 colours from 16.8 million. Enough so that it's hard to tell the difference between it and true 24-bit images (unless you have good eyesight or a very nice monitor).

The new version of Workbench, again dis-

cussed in greater detail last month, is on the surface not that much of a change from 2.1, or even 2.04. However, it is different enough so that the corresponding Kickstart ROM is going to cause compatibility problems. Commodore are quoting vague figures of around 50-60% incompatibility with old software, but this is including titles that have been around since the early days of the A500. A more realistic figure is that around 85% of titles released in the last year will be compatible.

The main problem is that the hardware has changed so much. It is in effect an almost completely new machine that just happens to run on an updated version of an old operating system. The changes also mean that although the compatibility

problems will arise mostly with games, a greater percentage of 'serious' software will be effected.

## IS THE A500/500PLUS/600 DEAD?

Many people are already complaining that they have been duped into buying A600s because there was no great amount of warning about the A1200's launch. The fact that the A1200 is now selling at the same price a lot of people paid for an A600 only a few months ago is rubbing salt into the wound a bit.

Whatever the fortunes of the new machine, the old machines will still be supported. Take a look at the figures. In the Christmas period Commodore

## A1200 GAMES

So what does this mean for Amiga gamers? Are we going to be swamped by lightning fast, 16 million colour flight simulations, or are the games companies going to play safe and go for A600 compatibility, ignoring the 1200's updated circuitry?

The potential is certainly there for some mindblowing games. It's the advances in the CPU and graphics departments that are going to make the most difference. Now that the processor and memory chips are 32-bit, rather than 16-bit, they'll be able to talk to each other much faster than before. This will be especially apparent on 3D vector games, flight sims for example, which could be substantially faster and smoother than anything yet seen on an Amiga. It could be time to kiss goodbye to the barren green plains, triangular mountains and paper darts that have been the hallmarks of flight sims for the past decade. Say hello to speedy light-sourced, texture-mapped F-15s, rolling countryside and fractal clouds. A little ambitious maybe, but give it time...

As for console-beating coin-op conversions, the A1200 gives programmers plenty of scope. Along with the new processor, the graphics chips have been upgraded. The simultaneous 262,000 colour mode won't be of much practical use in games, apart from

static title screens and so on, due to the loss of speed that results from manipulating eight bitplanes of data. Even so, the 16.8 million colour palette will come in handy, even on the lower-rated screen modes. With the maximum sprite width now taken up to 64 pixels, and the hardware lending a big hand in parallax scrolling duties, we could be in for some top notch arcade treats.

It's early days yet, but already things are looking promising. Ocean, Microprose, Gremlin, System 3 and Mindscape have all pledged their support for the new Amiga, promising new games written specifically for the A1200 early in the new year, with enhanced versions of current releases due to hit the streets before Christmas. Here's a rundown of the first batch of enhanced A1200 games, all scheduled for release within the next month or so.

### OCEAN

**Lethal Weapon III:** Ocean's conversion of the Lethal Weapon trio of films is another of their favoured multi-level platform games.

**WWF II:** More grappling japes with all your favourite American wrestlers.

**Cool World:** A colourful arcade adventure set in a parallel cartoon world.

dard. Yes, the Falcon does have a very nice sound processor which easily out-performs the humble 4-channel 8-bit job that has been with the Amiga since the dawn of modern computing.

Unfortunately for Atari, the Falcon is also far too expensive. There have been a few raised eyebrows at the recent Amiga price changes, all seeming very reminiscent of the A500 versus the 512ST but with positions reversed. The introduction of the Falcon may have prompted CBM to have another look at their strategy, but the Amiga is so clearly an established brand with great expansion capability that the Atari is no more threat than a turbo-charged Skoda would be to sales of the Ford Sierra.

## WHERE NEXT

As is traditional in a review of a new machine we start asking what secret developments are already underway for the future. Wherever will Commodore go next? Well, it's probably safe to say that there will be no new launches until 1993! The next machine we are likely to see in this country is not an Amiga as such, but a redeployment of the CDTV.

The mark 2 is likely to be a console beater, since the Nintendo and Sega guys are looking in that direction. It is possible that this machine will use surface mounted technology and feature the new AGA chipset as well as an '020 processor. In fact, it would turn out rather like an A1200 with a CD drive.

On the Amiga front the AAA chipset is already under development. This early it would be pointless in trying to sort out which features that have been discussed will make it to the final product.

are only manufacturing 30,000 of the new machine. If those all sell that will still mean approximately 1.5 million A500s and A600s against 30,000 A1200s, a ratio of fifty to one. Even if sales of the A1200 take off dramatically there will still be a huge base of machines out there.

Since there is no easy upgrade path for the ECS machines to an AGA machine it is likely that Commodore will not support the 'pre-thousands' as they will do the new machines – but who cares. All the best support comes from third party manufacturers anyway, and since the A1200 has the same ports as the A600 most devices will be compatible between these machines anyway.

The A600 is not going to stop selling because it is now cheap enough to begin an assault on the console market.

## CRISIS? WHAT CRISIS?

The question that everyone was keen to have answered is whether the A1200 can match up to Atari's Falcon, or whether the old ST v. Amiga battle is about to restart in earnest.

Well, from this side of the computer fence there is not much to worry about. Yes, the Falcon does have a 68030 compared to the '020 in the A1200. Yes, the Falcon does have more memory as stan-

## TECH SPEC

This is the final specification of the A1200, now available near you...

**Processor:** the CPU is the 68020 chip, clocked at 14.19 MHz. There is an optional slot for a 68881/68882 maths co-processor but it is recommended that this be factory installed. The bare machine is approximately five times faster than a standard A600.

**FAST memory:** There is no fast RAM installed on the base machine, but a 4Mb upgrade can be fitted to the CPU slot (32-bit RAM) and 4Mb via a smart-card in the PCMCIA slot

**Chip memory:** 2Mb of DMA access memory, either on the motherboard or on the board and in the trapdoor.

**Internal interfaces:** 150-pin local bus CPU slot, as in A4000. Also a 40-pin IDE hard-drive locator and a frame for a 2.5 inch IDE drive (though none are available with a hard-drive yet).

**Clock:** Optional battery backed clock, as A600

**External interfaces:** As the A600, including modulator output, PCMCIA slot and redesigned trapdoor port.

**Workbench/Kickstart:** 512k in a 32-bit ROM including Kickstart 3.0 – running Workbench 3.0

**CUSTOM CHIPS:** Lisa, Alice, Paula and super Gary operating on an internal 32-bit DMA channel. Graphics operation increased in speed by four times that of the original Amiga.

## COMMODORE £399

*'The dawn of a new Amiga age of excellence. The new machine offers outstanding value too.'*

EASE OF USE	86%
VALUE FOR MONEY	88%
EFFECTIVENESS	80%
FLEXIBILITY	78%
INNOVATION	90%

**OVERALL 85%**

## MICROPROSE

**Civilisation:** Take on the mantle of The Almighty as you create and maintain your very own civilisation. The main improvement is the use of 256 colour screens, as on the PC.

## GREMLIN

**Zool:** Touted as a *Sonic*-beater – put through the A1200 treatment, it might just live up to the claim. Smoother scrolling and a parallax backdrop have been added for the A1200  
**Nigel Mansell:** Destined to become a nostalgic reminder of the wonder year, this F1 simulator could still burn some serious rubber.

## SYSTEM 3

**Putty:** The metamorphing ball of squidgy gets even squidgier in 32 bits.

## MINDSCAPE

**Battletoads:** The toads prove you don't need anchovy pizzas and names of renaissance painters to get heavy with the baddies.

**Wing Commander:** A masterpiece on top-end PCs, this epic space adventure will really test Commodore's new hardware.

**The Miracle:** Mindscape's combination of software and a half-size synth piano keyboard will shortly be available in 32 bits.

# WING COMMANDER

The first A1200 games are starting to appear. Tony Dillon casts an exclusive eye on one of the new generation.

## IT CAN'T, CAN IT?

*Wing Commander* is a game spoken of in hushed voices. A game revered the world over. A game that single-handedly brought thousands of PC and PC clones into people's homes. In fact, it can be said that *Wing Commander* did for the PC market what *Mario* did for Nintendo. Why? Because it is, without a doubt, one of the most impressive games ever released – visually in particular, and it was because of this that so many PC outlets just set a fast, high specification PC in their window, and let *Wing Commander* draw the crowds and, eventually, the profits as people decided that it was 'the' game to have. Commodore and Mindscape have made it the key release for their new machine, and who can blame them?

On a very basic level, *Wing Commander* is a 3D space shoot 'em up, like Activision's *Warhead* or *Elite* without the trading. At its highest peak, it's a computer generated space opera, with every bell and whistle possible. The story goes something like this. An evil race of aliens (aren't they always), that go under the name of the Kilrathi, are trying to take over the galaxy that your squadron is based in. You, as pilot of a pretty sleek combat spacecraft, have been called upon to go out there and force the scum back where they came from. That's the

overall aim, yours is just to stay alive to fight tomorrow.

## GOING TO THE MOVIES

The big selling point, which makes what would be a very average game into a superb piece of computer architecture, is the cinematic way in which the game is presented. I'm not talking cinematic in the way that Cinemaware games are presented, I'm talking about the completeness of the game. Everything in the game, visually and aurally, adapts as the story unfolds, giving you the impression that every mission you fly, that every screen and menu you enter, plays a small role in the grand scale of things, rather than just a set of missions going under the banner of a campaign.

Before you can do anything though, it helps to have a drink in the bar and meet some of the people you'll be flying with. Each mission puts you out in the action with two wingmen, and while these might not always be the people you chat with before the mission, you'll still learn a lot to your advantage. It seems like everyone has been flying a lot longer than you, as they impart all manner of advice and knowledge including known flight patterns and strategies of different enemy craft, right down to the best directions to attack from. As the game goes on, you'll be able

As you take part in a mission, messages are constantly flashed up on screen to help give you some idea about what's happening. There's even the option to taunt your enemy with a few well chosen insults.

to build up quite a portfolio of information, so as the missions get harder, so do you.

Chats out of the way, you enter the briefing room for details on the next mission. Usually, this will entail flying from the Tiger's Claw (your home base) to a specified area of space and taking out an invading threat. Simple enough. But it's really at this point that you start to notice the effort that's gone into making the game look like a film. The view pans in perfect parallax from the commander to the battle plans on the wall behind him, and then cuts to the

faces of the crew you're flying with. Then comes some short animated sequences as pilots head for their ships, and then it's out into space.

## SPEEDY SPACE

Wow! Wow! Wow wow wow! If this is the game that they said couldn't be done on an Amiga, then up your nose with a rubber hose. *Wing Commander* is easily as good as a 386 version of the PC game. It's fast, it's very smooth and extremely convincing. These are, without a doubt, the best graphics of this kind ever seen on an Amiga.

**CROSS HATCHING** For the sake of speed, the graphics were totally downgraded from the impressive 256 colour sprites of the original to 16 colour bitmaps for the Amiga. Anyone who has tried to animate in HAM knows how much of a speed difference this makes, but as you can see from the pictures here, the game looks nothing but impressive. Apparently, for owners who use the modulator plugged into a TV, the game looks even better, as the slight blurring of a TV screen covers up the cross-hatching used to create different shades.

If you have an A1200 already, and want to make use of its extensive palette, then you'll be pleased to hear that there are plans afoot to release an A1200 only version in the new year that will reinstate the amazing 256 colour palette and show off the game as it was originally intended.

**HORNET** – During the game there are four different craft to pilot. Here's the first – it's for beginner's only so be warned.

**RAPIER** – This is the fastest of all four ships and is probably the best general all-round fighter of the lot.

**RAPTOR** – Now this is more like it! For the cowards in us, this one has very heavy shielding, is fast and packs one hell of a punch.

**SCIMITAR** – This ship is about as fast as a Skoda. Although a medium class fighter it's got very little shielding and hardly any arms.

Of course, you don't fly solo missions as your fellow pilots are on hand to help out when things get tough. Taking part in a dogfight is great fun, especially when another pilot comes in for the kill.

If you've looked at the screen-shots on these pages, you'll already have noticed something special about the game. All the graphics of the outside world are bit-mapped like sprites instead of the more standard polygon based images. By using some very clever coding, minimum memory is used as the graphics are rotated, shrunk, enlarged and generally tossed about to give a very realistic view of space. On a machine like this, it's fast too – as fast as most vector simulations. Looking like this, you can't help but close your eyes briefly as an explosion fills the viewscreen. I can't emphasise enough how good the graphics are. All I can say is that it's worth getting an A1200 just to see this game in action.

If that wasn't enough, the sounds are fairly awesome too. The PC version featured hundreds of hours of music, and the Amiga version hasn't missed a beat. The idea is that the music is playing all the time, and changes to suit what's happening.

Obviously, there are different snatches for mission briefing, sitting in the bar and boarding the ship, but how about music in battle that emphasises how the situation is going. If things are in your favour, the music will be charging and encouraging, if all is against you and your prospects look bleak, the music will darken. It's an impressive effect, and one that works better than anything before it.

## CONCLUSION

This is a very playable game. As a flight sim, it's very basic, with simple left/right and up/down scrolling the display rather than moving around in it. Fire button fires bullets and space bar releases missiles. With minimal other keyboard controls such as thrust and auto-pilot, it takes no time at all to get into it. Yes, it's a lot more arcade based than it first appears, but it's a lot of fun. *Wing Commander* is a perfect example of what the A1200 can do. This is only the beginning. ☺

## A600 VERSION

For A600 owners, I'm afraid it's a different story. The game is exactly the same in effect, with exactly the same plot, storyline and touches. You'll need 1Mb of memory to run it, at least, and a hard drive is seriously recommended if you don't want to lose too much speed. You will be able to run it from floppy, but as the finishing touches are only beginning to be added to the A600 version at time of writing, I can't tell you how much of a difference it will make. By using some clever coding, author Nick Pelling has been able to cram a massive 1.5Mb on a single floppy, so the chances are that there won't be any more than two or three disk swaps per mission, but we'll wait and see.

In terms of still graphics, the game will look exactly the same. It has been written to run on all formats, so the same 16 colour graphics will apply. Similarly, the game will contain all the same music and sound effects, so you won't lose out there either.

Where you will lose out is in speed, obviously. The poor A600 hasn't the processor speed to handle some of the heavy calculations involved in rotating and resizing all the bitmap graphics in the game, so it all chugs along at a fairly slow rate. This does detract from the action, so if you really want to play this, you'd be better off investing in an accelerator board for your machine.

Don't get too cocky as your ship is far from indestructible. Once you've taken a fatal hit, an animation sequence kicks in showing your ship exploding in a pyrotechnic light display. Conversely, should you do well, there's another sequence that shows you being rewarded with a medal of honour from your superiors.

The seedy space-station bar is where you can pick up a lot of vital information about forthcoming missions.

# GET SERIOUS

If you're interested in more than just games, Get Serious offers the best in productivity software and hardware reviews.

## 98 G-LOCK

Nick Veitch looks at a gen-lock that sets the pace for a new generation of Amiga peripherals.

## 100 CDTV-HD

Finally, the CDTV gets serious. The first unit with an internal hard drive gets a close examination.

## 102 FINAL COPY 2

What do you get if you combine a wordprocessor with a DTP package? Tony Horgan has the answer.

## 105 YOU MUST REMEMBER THIS...

If you find that your memory is failing and you need a bit of a boost, we review some of the options for an expansion.

## 109 CANON PRINT STUDIO

Mat Broomfield inspects Canon's versatile 24-bit printer utility.

## 112 OPALVISION

24-bit images on the Amiga? They said it couldn't be done; OpalVision proves the critics wrong.

## 117 3D CONSTRUCTION KIT 2

Domark's new upgrade to its excellent Freespace construction kit comes under close scrutiny.

## 123 ZAPPO HARD DRIVE

Fed up with all that disk swapping? We give the lowdown on the newest solution.

## 126 VIDI 12

Rombo are about to release a high performance, low cost colour digitiser. Mat Broomfield takes it for a spin.

## 134 CD COLUMN

As the software continues to expand, more discs fall under CU's metaphorical microscope.

## 137 ART GALLERY

Once again, we give our readers a chance to astound everyone with their artistic skills.

## 145 PD SCENE

From rave demos to adventure games based on antipodean soaps, it's simply amazing what the public domain has to offer.

## 148 PD UTILITIES

An in-depth look at some of the cream of the PD scene.

## 152 VIDEOSCAPE 3D TUTORIAL

Tony Horgan continues with his tutorial to this exciting 3D drawing package given away free on last month's coverdisk.

This sequence shows how you can create your own pop-video. Well almost. There is no reason why you can't run animations over the top of live video. If you are using a good enough recorder you can even layer these to produce effects that would not be possible on one Amiga.

Is the world of Desktop Video going to be turned upside down by a small black box which costs less than an A1200? Nick Veitch gets synched up for action.

# G-Lock

## NO JOYSTICKS ALLOWED

Put away your joystick. There's no need to engage flares, drop chaff or adjust your head-up display. There are no bogeys on your tail, your radar is clear, because GVP's G-Lock is not their first entry into coin-op conversions, but is in fact a new genlock. A unit which some people are claiming will do for genlocks what the A530 did for hard disks – set the standard for others to follow.

## VISION AND SOUND

The first thing that may puzzle you about the unit is that it has two audio inputs and one audio output. Who ever heard of a genlock with an audio input? Well, nobody up until now. It's not as strange as it may seem though. When involved in Desktop Video (DTV) work, it is often the case that you are recording sound and pictures simultaneously, or that sound is added on later. To do these jobs properly, you really need some sort of audio processing equipment, so GVP have provided one in this unit. Volume levels and tone controls can be operated via a simple pop-up panel.

## MAKING CONNECTIONS

All you have to do to use your G-Lock is plug it into

the standard RGB port with the length of cable attached to the unit. Having the connector on a cable is an excellent idea as it saves wear and tear on the G-Lock itself and also avoids the necessity of providing an extra six inches of space at the rear of your Amiga. Unfortunately the cable isn't all that long...ah well, it was a nice try. The RGB through connector is standard Amiga 23-pin so you can just plug your normal Amiga video lead (or heavens forbid, a modulator) into the G-Lock to get perfect vision.

There are three inputs for external video sources, two RCA phono plugs for composite signals and one of those PS/2 types for the Y/C (S-Video) input. Because of hardware limitations you cannot have Y/C and composite sources connected at the same time, although you may use two composite sources simultaneously.

The only other connection is a fly lead that must be connected to a joystick port. This could cause problems if you wanted to use the unit with a CDTV though...

## OUTPUTS

Because of its transcoder circuitry the G-Lock will simultaneously output composite, Y/C and RGB

signals, which means you can connect it up to your normal monitor and simultaneously record on an external video unit. The provision of an S-Video output (in which the Chrominance and luminance are separated to reduce cross-over interference) means that incredibly sharp pictures can be obtained which are certainly good enough to use in professional set-ups.

In fact, the secondary output on the test model was in some cases found to be sharper than the image obtained on a normal Amiga monitor. The lesson is simple, if you are using a good enough source (i.e. an S-video camera or a very high quality VCR), the output is going to be good enough to pass off on even the most critical relative.

## MACRO MAN

One of the benefits of being under complete software control is that the G-Lock unit can also support Arexx macros. This is very important. The ability to be able to fiddle around with the gain and saturation using the mouse is very useful for setting up the equipment prior to a recording session, but if these controls can be accessed by an Arexx script it means a

## WHAT IS A GENLOCK?

A genlock is a very cunning device. It is, at its most basic, a piece of hardware which will superimpose computer graphics over a video image generated by an external source. In simpler terms it's a little box that lets you draw or type things on your Amiga and see them appear stuck on the top of a TV picture. In the simplest possible terms it is a magic box which sucks in computer and video pixels and makes them all friends with each other.

The result of all this cunningness is displayed daily on the TV. All those little text boxes that appear along the bottom of the screen, be they subtitles, captions or whatever, are all generated by a computer. They are then fed into a genlock, along with the live video image from the camera or tape, and magically they all come out together.

The genlock itself doesn't have to read or understand the video image – at least not all of it. It really only performs two primary functions. The first is a timing operation – the hardware locks onto the sync signal from the video source (which tells the picture where to start) and then slows down the Amiga until its video sync occurs at the same time.

The second function is a switching function. As both sets of video data flow through the unit it checks to see whether the signal coming from the Amiga is the colour which has been chosen to be transparent. If it is then the live video source is switched through to the output and if not then normal Amiga graphics are displayed.

It is a very simple concept, but the electronics involved with high frequency analogue signals are horrible and a good Genlock is hard to find.

## G-LOCK

**OVERALL 92%**

The Audio panel lets you control the mixing, volume and tone controls of both of the phono inputs. A useful addition forever doing away with having to hook up your amp as well as your Amiga when you want to do a Ridley Scott.

Impress your friends and get lot's of money from Independent Television by producing the Chart Show in your bedroom.

These effects are fairly simple to produce, which just goes to show that a little can go a long way!

The control panels reveal options for accessing the new modes available to the AGA and ECS chip set. You can now select to key on particular colours, or on the bitplanes (in AGA you can choose from 8-bitplanes instead of 5, as with ECS).

The main control panel selects the source, keying mode and lets you play with the input sliders. It is A good idea to load a colourful picture that you know well, or better still some test bars, to get the colour balance right.

great number of effects can be controlled automatically.

One of the reasons for having two composite inputs is that they can be software switched. In one of the example files included with G-Lock, the software fades out from one video image, switches channels and fades in the second – something that would be impossible to do manually. Many other wipes and effects could be programmed in through ARexx to provide you with a video effects unit as well as a genlock.

Unfortunately, because of the way the hardware operates it is impossible for the S-Video and composite inputs to be used simultaneously, which means that any switching effects can only be used between two composite sources.

The unit can also be used as a video splitter unit, either manually or via ARexx. This could save a few sleepless nights if you have ever tried to use Vidi or Digiview without a splitter.

### AGA DO

This is the first piece of hardware produced that actively supports the AGA chip set (or AA chip set, according to GVP and the old Commodore press releases) as found in the A4000 and the new A1200.

The G-Lock uses the new Chromakey function of the AGA graphics chip, which allows a number of different colour levels to be used as the keying channel for the genlock. This could potentially be useful if you cycled through them and for limited special effects but are not really going to set the world on fire so don't let it discourage you too much if you don't have one of the newer machines.

It also allows you to select any of the eight bitplanes to be used for keying data.

This is very similar to the support given to the ECS range, so it isn't really a case of new features, just extended options.

### IMPORTANT

Due to the limitations imposed by digital framegrabbing video images (which is the process by which the majority of the artwork in this magazine is prepared) the images shown do not necessarily reflect the potential clarity of the actual images. These images are purely to show what effects may be obtained using the genlock, not to indicate the quality of the images produced.

# CDTV HD

**When is a CDTV not a CDTV? When it's a CDTV-HD of course. Confused? So was Nick Veitch (but he's always been like that).**

## LET'S GET HARD

There's one really annoying thing about the CDTV. Well, in fact, there are probably quite a lot of really annoying things about the CDTV, but I'm only going to talk about one of them: expandability.

Commodore designed and launched this device as a 'multimedia entertainment system'. In that respect it is an excellent piece of kit, but maybe they made it look a bit too much like a hi-fi separate. Although inside beats a heart that's pure Amiga, it's that of a stunted Amiga — it'll never be more than 4'11". The one thing that would have spoiled the sleek lines of the CDTV is an expansion port. Without such a port the world of hard drives, memory expansions etc., is almost closed. But not quite.

Calculus Stores now have CDTVs available which have internal hard-drives already installed. Everyone by now must have realised that an Amiga without a hard-drive is an Amiga with which it is very difficult to run proper application software. In fact, some of the software released recently requires a hard-drive to run (*Professional Page* and *Professional Draw* spring to mind).

## HARD-DRIVE NECESSITY?

Too few CDTVs have been sold to accurately judge the sort of people they are selling to, so it is difficult to say whether the ability to run certain applications could be a critical purchase factor. However, it is unlikely that the ability to play the same games off disc instead of disks is going to be a tremendous selling point.

A hard drive is very useful if you use Workbench a great deal. A hard drive is very useful if you create files which are very large (e.g. graphics, sound, DTP, etc.). A hard-drive is very useful if you value your time. A hard drive is very useful if you don't want to end up wading through small squares of plastic. There are thousands of reasons.

The Compact Disc may be a wonderful retrieval system for reading information, but you can't write anything back to it. This is a major disadvantage unless you have an alternative mass-storage device, like a hard-drive. It's a bit pointless being able to access the full Adobe font library from CD if you can't

**The Alternative** The alternative to getting a CDTV with a hard drive is obviously getting an Amiga with a CD-ROM and a hard-drive. The A670 (or whatever they call the CD-ROM for the A600) isn't available yet, but presuming it is in the near future (and presuming it costs no more than the A570), this could make it possibly more advantageous to buy an A600HD with a ROM drive, giving greater expansion possibility and a more conventional looking machine. On the other hand, it wouldn't be black, and it would certainly be a lot more messy with all those power supplies knocking about.

It may look like just another CDTV, but this unit houses a fully functional Amiga hard drive, making it more like a multimedia application platform and less like a quirky CD player. A hard drive is as necessary to the CDTV as the keyboard.

**The Commitment** Calculus are more than interested in the CDTV and this shows in the level of support. As well as being very flexible when it comes to the specification of a machine, they also produce a wide variety of CDTV accessories, such as keyboard converters that allow an A2000 keyboard to be used with the CDTV (very useful if the CDTV is your second Amiga).

run the DTP software that could make use of it.

## THE DRIVE

The mechanism itself, and the controller, sit inside the CDTV case. The drive itself may vary, but most are likely to be supplied with a SCSI mechanism with an access time of around 18-20 milliseconds, which doesn't quite match the speed of the drives you might find in a 2000, but is about as fast as your standard A500 drive.

There is very little possibility whatsoever of getting another drive to fit in as well, so you are limited to your initial choice, unless you replace the mechanism entirely. It could be possible to situate a drive outside, but only through some nasty and unreliable ribbon-cable connections sneaking out of the back.

## CONCLUSION

The unit is well put together, probably quite reliable and an excellent solution for those who want to use the power of CD technology not purely for its entertainment value, but also for its productivity potential. The hard-drive aspect of the machine will not be so important to those who buy the CDTV to use purely as an entertainment system, but for those who consider it more as an Amiga inside a CD-player.

# stereo MASTER

When you are considering purchasing a sound sampler there are plenty to choose from. Why compromise? your choice should be the new full featured STEREO MASTER for the Amiga, with software that is designed from our top selling Amiga sampler AMAS and a package that gives you more extras than a M series BMW. By purchasing this state of the art product which combines a quality sampler with the expertise of over 10 years of software programming, you are purchasing a top quality product with the knowledge that it is not only compatible with existing Microdeal products but will also be with future ones.

## What is Stereo Master

Stereo Master is a low cost, high quality sound sampler for the Amiga range of computers. The sampler cartridge included in this package plugs into the printer port at the rear of the computer and allows you to analyze the sounds coming in from devices such as Personal Cassette Players, Compact Disc Players etc, or change the way they sound using the Real Time Special Effects or record them. Once in the computer STEREO MASTERS unique editor will enable you to edit the sound in practically any way you can imagine. Once you have the sound sample how you want it, you may incorporate it into your own Demo's or use STEREO MASTERS own built in sample sequencer to play back the sample in sequence with other samples!

MAIN SCREEN

## The Sampling Software

Every feature you would expect to find in a professional editing suite including:

- \* Real time record/play ghost markers
- \* Cut or Delete selected sample area
- \* Mix sample with full or half volume
- \* Shrink in by 25%/50%/75% by drag or wipe
- \* Fade in/out with selectable degree of fade
- \* Filter sample with soft/medium/hard filter
- \* Selectable trigger volumes
- \* Record frequency from 3.0 to 55.9 KHz
- \* Full editing and control facility for left/right channels
- \* Playback volumes
- \* Decrease volume
- \* Increase volume
- \* Bounce sample
- \* Paste sample
- \* Trigger recording
- \* Clear left/right samples
- \* Loop sample

THE SPECIAL EFFECTS CONTROL PANEL

## The Special Effects Software

For the first time ever you can emulate special sound effects in real time just like the sound labs can for film studios, normally the hardware to produce these effects would cost 100's of times more than this package. Features on the FX menu include:

- \* Built in real time special effects including Echo, Reverb, Ramp, Pitch up/down, Stereo bounce, Multi echo Chorus, Phaser, Reverse and Pitch bend.
- \* Fully programmable special effects so that customised effects can be recalled

3D DISPLAY OF SAMPLE FREQUENCIES (FFT)

## The Analytical Software

A whole host of pro-type analytical functions include:

- \* 3D display of sample frequencies (Fast fourier transform)
- \* 3D display also includes 2D envelope display plus sample information.
- \* Built in Stereo spectrum analyzer
- \* Stereo Oscilloscopes with trigger markers

STEREO SPECTRUM ANALYZERS

STEREO OSCILLOSCOPES

THE SEQUENCER CONTROL PANEL

## The Sequencing Software

Our built in sample sequencer allows you to take up to 18 samples (memory permitting) and sequence them into your own "tronic" mixes, features on the sequencer include:

- \* Real time entry of sequences from keypad
- \* Step time entry of sequences
- \* 2 stereo channels for sequencing
- \* Storyboard style editing
- \* Digital sequence position display
- \* Fast forward/rewind controls
- \* Program sample to keypad
- \* Stand alone demo player displays IFF picture whilst playing sequence
- \* Sequence copy function
- \* Loop sample
- \* Selectable sequence speed
- \* Dump/re-edit function
- \* Test function
- \* 2 octave playback
- \* Insert/delete sample in step time

© 1991 MICRODEAL U.K.  
ALL RIGHTS RESERVED

## Other innovative features

- \* We know this product is years ahead of its time and these additional features justify our boast:
- \* New style stereo cartridge
- \* Produces stand alone executable sample files
- \* Fully multi tasking
- \* Saves in IFF/Raw/Instrument1/3/5, Octave
- \* Includes walkman type cable
- \* PAL/NTSC full screen display
- \* Can create workbench icons
- \* Save customised settings

IFF graphics can be dropped in anywhere on the page. Flowing text around your illustrations is simplicity itself.

Not happy with the font? Try giving it a bit of zest by swapping it for an italic face. Or, create the same effect with the 'oblique slant'

Give your documents yet more punch with flashes and 'boxed-out' text.

Use the zoom function to get an overall view of the document... and here's the press release in all its glory! Hmm, maybe that logo could do with dropping down the page a little...

final copy 2

If you use your wordprocessor for anything other than personal applications, you've probably been frustrated at its lackluster output. Let's face it: knocking up an eye-catching press release on your average wordprocessor would be quite a task. *Final Copy 2* aims to rectify this by combining the power of a top-notch WP with the presentation facilities of a DTP package.

Used in its most basic form, *FC2* can be run from floppies on a 1Mb machine, but if you're going to take advantage of its plentiful DTP features, a hard drive and extra memory are essential. The wordprocessing and DTP features are completely accessible at all times, but unless you fancy constant delays changing fonts and so on halfway through typing up your body text, it's best used in two stages: first as a standard WP, and second as a page make-up tool. So what's under the bonnet of the WP side?

Running in four colours with the default font activated (12 point SoftSans) there's a very slight delay from keyboard to screen, but nothing that's going to trip you up while you're typing. Gadgets just beneath the menu bar give instant control over line spacing and justification. The cut, paste, search and replace functions are all controlled Mac-style via the mouse and keyboard, and if that doesn't suit you, they're available from the menus. A 110,000 word British-English spell checker is included, along with an 826,000 word thesaurus.

With your text ready, you can move on to the page-makeup stage. Although the package quotes the inclusion of 20 outline fonts, there are in fact only five: Courier, Helvetica, NC Schoolbook, Times and SoftSans. However, these are all included in plain, bold, italic, and bold italic forms, hence the total of 20 in all. These can be displayed in any size up to 300 point. There are also eight bitmapped fonts. Among the text manipulation options are underline, double-underline, strike through, superscript and subscript. You can also slant text either left or right.

Your documents can then be jazzed up with some graphics. IFF picture files can be imported, cropped, resized and re-scaled. Text will normally flow around the rectangular border of the IFF graphic, but you can also get text to follow the contours of your illustration if you've got an odd-shaped picture or logo. Alternatively, text can be laid over the top of an illustration.

Panels, logos, flashes and diagrams can also be created with the structured drawing tools. The functions available are pretty basic, consisting of boxes, ellipses, lines and arrows, but even so, it wouldn't take long to knock up a few simple logos. The trouble is, there's no documented way of sav-

ing out drawings as clip art, so you'd have to either re-draw your logo every time you started a different document, or save an empty document with just the logo, and expand on that. There may be a better way around the problem, but as the subject isn't discussed at all in the manual, you're left to work it out for yourself.

While *FC2* is capable of producing some very professional-looking documents, once you start trying to put text in boxes across columns, you'll run into problems. Because it handles some DTP duties so well, it's easy to forget that it's really a word processor. *FC2* is better suited for creating fanzines, press releases, newsletters and so on.

Thanks to the outline fonts and PostScript output, you're sure to get the best possible results from your printer, whether it's a simple nine pin dot matrix, or a PostScript laser printer. *FC2* can also output PostScript files to disk, so even if you don't have a decent printer, you can get your documents run out by a third party typesetter.

Who is this hybrid package aimed at? Well, certainly not professional publishers, but just about anyone else who has to correspond with clients or customers. As an advanced word processor, *Final Copy 2* is a great success. Just don't expect it to rival the likes of *Professional Page*.

- Word processor with DTP features • Supports IFF graphics and outline fonts • Features structured drawing tools • Large dictionary and thesaurus • Not fully fledged DTP • Requires at least 1Mb and hard drive • PostScript output

**Address:** Gordon Harwood Computers, New Street, Alfreton, Derbyshire, DE55 7BP. Tel: 0773 836781.

# You must remember this...

Take a zip down memory lane with John Kennedy, if he can recall where it is.

## BACK IN THE OLD DAYS

Gather round children, and I'll tell you a story about... erm... thingy. My memory isn't what it used to be... Ah, that's it! Memory.

Of course, back in the old days we had the World's First Great Memory Shortage. This was a Bad Thing and was entirely due to the Americans. Or the Japanese. Or both. Back then, if you grew bored with the facilities offered by your power-station running 1K ZX81, you would have to save up and buy a 'Ram Pack' to play *3D Monster Maze* (or steal one, eh, Mr Technical Editor?).

These packs contained an extra 16K of precious storage space, but cost a small fortune from all the mail order companies. In fact, you could pay up to £100 for a small black fizzing box that couldn't be breathed upon without suffering dreaded ram pack wobble syndrome. Funny how the Amiga's edge connector uses exactly the same technology... Anyway, if you were running 'serious' applications, you would have to wait a year or two for the release of the new-fangled Spectrum which would eventually come with a gargantuan 48K of memory. How we laughed! How we joked! How we played *Football Manager* until two in the morning...

Of course, in these enlightened days we all own reliable Amigas. Or at least, we'd like to. The main reason why A500s seem to crash all the time is that they only have a minute 512K of memory on board. In my opinion, if you haven't stuck something in your trap door, you can't complain about the guru. Thankfully, new Amigas all come with 1Mb as standard. Still, the lower limit for running serious applications is really about 3Mb, and with the recent advent of 24-bit image processing, this limit is now more like 8Mb.

## CHIP AND CHEERFUL

By far the easiest and cheapest way of expanding an A500 or an A600 is via the trap door. You can pick any one of a hundred vendors to supply you with a small card which clips neatly inside your Amiga and provides you with 512Kb or 1Mb of Ram. On newer A500s, A500Pluses and A600s, this Ram is called 'chip memory' – simply because the Amiga's custom chips have direct control over it. On Workbench v2, this memory is referred to as 'graphics memory' on the Workbench screen title bar, because that's the most obvious use. When you use *Deluxe Paint* with a 16 colour high-resolution, interlaced and overscan screen watch those numbers plummet! Most programs will use fast memory first if possible, but all will need a bit of Chip Ram, as will any program which uses sound.

Try typing 'AVAIL' at a CLI prompt to see what memory you have in your Amiga, and where it's going. Chip Memory is a good thing to have, so before you start thinking of adding memory in any other way, fill your trap door. There are various 'fudges' around, which use the trap door to add more than the usual amount. These boards may seem a good idea at the time – but beware, they

sometimes cause problems. Most require fiddling with an extra wire to the unsuspecting Gary chip – bye, bye warranty. Some will not 'auto-configure', which means you'll need to run a small program every time you wish to use the memory. Some boards come with so much extra memory (some with 8Mb!) that the power supply starts to become a problem.

Although I know of several boards in constant and trouble-free use, I don't like recommending them. There has always been a trap door price war, which means you can now get a 512K expansion for £15, a 1Mb expansion for a Plus for £35 or a 1Mb expansion for an A600 for £45. At a computer fair you can probably get a fiver off these prices, so there is really no excuse for not having one. Old Amigas can have up to 1Mb of chip memory, newer ones (all Pluses and A600s) will sport up to 2Mb. If you have an older Amiga, a special board which contains the relevant updated custom chips and memory can be bought for about £150.

## FAST AND FURIOUS

Once you have filled your trap door (or, if you have an A2000/A15000, once you need more memory

ZIP (zig-zag in-line packages) are the standard way of expanding the A3000, the A2630 (as shown above) and a few of the slim-line external expansions for the A500. They tend to be a little more expensive than either the DIPs or the SIMM packages and are rapidly going out of fashion because they are very fiddly to fit. They are also found in 16-bit and 32-bit configurations, but 32-bit packages are more common. Basically the advantage of the ZIP is that it's small.

## BYTES, KILOBYTES AND MEGABYTES

Memory is measured in 'bits', a contraction of the term 'binary digit'. Eight bits make a 'byte', and 1024 bytes make a 'kilobyte' or 'Kb'. The number 1024 is used instead of 1000 (IEC permitting), because 1024 is 2 to the power of ten, and 2 is the magic number when it comes to computer logic and binary arithmetic. One megabyte or '1Mb', is 1024 by 1024 kilobytes = 1048756 bytes, and a gigabyte of memory would do very nicely, thank you very much. A RAM chip which is quoted as 256K x 4, supplies 256K but only in 4 bits. Two of these chips would give a full 256K, and so eight are needed for 1Mb.

at all) you'll need to think fast. That's because 'fast memory' is the name given to memory which is added above and beyond the 'chip memory'. It's called 'fast' because the custom chips don't have priority over it, and therefore can't slow it down from the point of view of the 68000 microprocessor. The sub-3000 Amiga can access up to 8Mb of fast memory, but you'll need some sort of card to add to your Amiga, and then you'll need some form of RAM chips to put in it.

## RAM BOARDS

A600 owners will have discovered a strange slot on the side of their games consoles – sorry, slip of the tongue – home computers, and will have probably tried to insert all sorts of small objects (credit cards, GameBoy cartridges, penknives) to see what happens. Nothing ever will of course, unless it has PCMCIA written on it somewhere. The first of these PCMCIA cards which supply Amiga RAM are actually starting to appear now, and prices should fall as they become more popular. As to their performance, you'll have to wait until Lord Emap can afford the £250 needed to buy an A600 for the office [i.e. a very long time – Ed.].

A500 and Pluses need a board which connects to the expansion bus on the side. If you are lucky and have a hard drive, chances are that it will also contain the sockets for the RAM chips. If not, you'll need a board such as the excellent Cortex (now supplied by Reflex technology) or super-slim

## THE CHIPS ARE UP

### DIP Dual In-line Package

The original memory chip, which looks like all chips used to before the advent of surface-mount technology and space-saving pin outs. A typical chip is a 256 x 4 DRAM, as used in the official A590 hard drive and some accelerator cards. The main problem with these chips is the actual process of inserting them: bending a pin, or inserting one into your finger are both painful processes. A megabyte of DIPs will cost around £25.

### SIMM Single In-line Memory Module

SIMMs are the easiest and most widely supported method of expanding memory. Each SIMM contains eight or nine surface-mounted RAM chips on a small printed circuit board. Common capacities are 1Mb and 8Mb, with the 1Mb modules costing about £20-30, and 4Mb ones about £90. The 32-bit SIMMs needed by some accelerators currently cost about £70 and £180 for 1Mb and 4Mb respectively. Be careful when buying SIMMs, as some expansion boards will only use the eight chip varieties (e.g. 1Mb x 8), and not the more common – and sometimes cheaper – nine chip sort (e.g. 4Mb x 9). The nine chip SIMMs are used mainly in IBM and compatible PCs, which have always needed an extra bit in every eight for some wasteful 'parity checking'.

Always check with your hardware's documentation before ordering. Most boards will not support a mixture of SIMM sizes. Either you can use 1Mb or 4Mb modules, but not a combination of both. For example, if you start putting 1Mb SIMMs in your GVP Series II hard drive, you will limit yourself to a maximum of 4Mb. If you use 4Mb modules you'll achieve the more satisfying figure of 8Mb. SIMMs are the memory module of choice – if you buy an expansion board and populate it with SIMMs, there is a good chance that you can take them with you when you upgrade.

### ZIP ZigZag In-Line Package

ZIPs promised lots of memory in little space, and this they delivered – the Supra 500RX can contain 8Mb of memory but is only 30mm wide. The disadvantages of ZIPping are twofold – they are not as commonly supported as SIMMs, and they cost a little more. A megabyte of ZIP chips will cost about £35. The same problem of incompatible sizes which occur with SIMMs can also effect ZIPs, so it makes sense to buy the largest capacity you can afford to avoid blocking any future upgrade paths.

Left: Standard DIP memory chips such as those found in most trapdoor RAM expansions and the occasional hard-drive may come in a variety of configurations. It is always wise to make sure you have got the specs right before handing over any cash.

Below: SIMM modules are the standard way of expanding PCs, STs and most new Amigas. Make sure you know whether you want 16 or 32-bit.

SupraRam 500RX. Each board has its pros and cons, not the least of which is what sort of RAM they support. As you have probably seen from magazine advertisements, there is a bewildering array of different RAM packages available. We'll take a look at the more common types in a minute. If you have an accelerator card, or if you are thinking of buying one, you should check out the memory expansion facilities offered very carefully.

Put simply, an accelerator without its own memory is a wasted piece of cooked sand. As the 68020/030/040 processors have a 32-bit wide data bus they can read and write to memory a lot faster than the standard 68000, which only has a 16-bit bus. An accelerator which claims to speed up your Amiga five times will only do this when running programs in the 32-bit wide expansion RAM. Accelerator cards have a further bonus, in that the memory expansion is freed from the 8Mb Fast Ram limit, so permitting memory sizes of 16Mb and above. You should always populate your accelerator card before any other expansion card to make the most of any speed increase. The memory in these cards is called '32-bit' memory, but that only describes the way it is accessed – most of the time it's not a different type of memory chip. (Although if you are using SIMMs you'll probably need special 32-bit modules. For example, the GVPA530 needs 32-bit wide SIMMs for its built-in accelerator.)

Accelerator cards are dropping in price all the time. Latest news from the States would have us believe that we will be able to buy 68030 cards for Christmas at less than the price of current 68020s. In the meantime, UK companies such as Solid State Leisure are selling what are probably the cheapest cards. There are exceptions to this rule with accelerator/memory cards containing expensive 68020/30/40 chips, such as the new 'Blizzard' board which comes with a double-speed 68000. Although any speed increase will be hard to notice after five minute's use, this board will be a god-send to CDTV owners who have always had memory expansion hampered by the lack of an expansion bus.

## RAM CHIPS

RAM chips come in different shapes and sizes, although work internally on exactly the same principles. Dynamic RAM is de rigueur these days, to keep size and price to a minimum. DRAM needs to be constantly refreshed, or reminded of its contents, to work properly. In contrast, static RAM can remember what's what indefinitely, as long as it is given a power supply. The Amiga's real-time clock

contains a minute amount of static RAM and a small battery to remember the time when you switch on again. Static RAM is too bulky, expensive and slow to find large scale use.

When buying RAM, you may have to take its speed into consideration. For accelerator cards, 60ns RAM is recommended but for other applications 70 or 80ns RAM should suffice. If the RAM's speed is too slow, it will actually start to forget things before it is refreshed, which can only lead to corrupt programs and constant software failures. If the RAM isn't getting a good enough power it may also start to fail.

## WHERE TO GO

There are as many outlets for memory as there are computer companies more or less, and RAM chips are a hot favourite at shows where you may pick up a bargain. Here, though, is a short list of memory purveyors to the gentry:

Reflex Technology	(051 708 5588)
Silica Systems	(081 309 1111)
First Computer Centre	(0532 319444)
Gordon Harwoods	(0773 836781)
Meridian	(081 543 3500)

Well, that about wraps it up for this feature or, er... whatchamacallit, you know, thingy, and we'll see you next time. ☺

# Two good reasons to put the flags out.

Star has built its reputation on building top quality, feature packed printers at prices everyone can afford. And the two new dot matrix printers offer the best value ever.

The LC-100 colour is the UK's lowest cost colour printer. It offers the best of both worlds: mono and colour printing for work or play.

Turn your print-outs into modern day masterpieces with a new piece of German software. Mat Broomfield dons his beret to take a look.

## PRINTER DRIVERS

It's a little known fact that most Amiga printer drivers only support output up to a colour resolution of eight bit-planes (256 colours to you and me!). This means that even when you're printing HAM pictures, your printer is only accurately outputting one sixteenth of the possible number of colours. When it comes to 24-bit images, even if you can find a suitable screen-dump program, chances are the results will be woefully inadequate.

Of course, you could always buy a dedicated program such as *Trueprint* from ASDG, but now there's a cheaper alternative that has all the features of *Trueprint* and more, for less than half of the price.

The program is called *Canon Studio*, and as its name suggests, it is closely linked to the Canon range of printers, although the full commercial version will work with any printer.

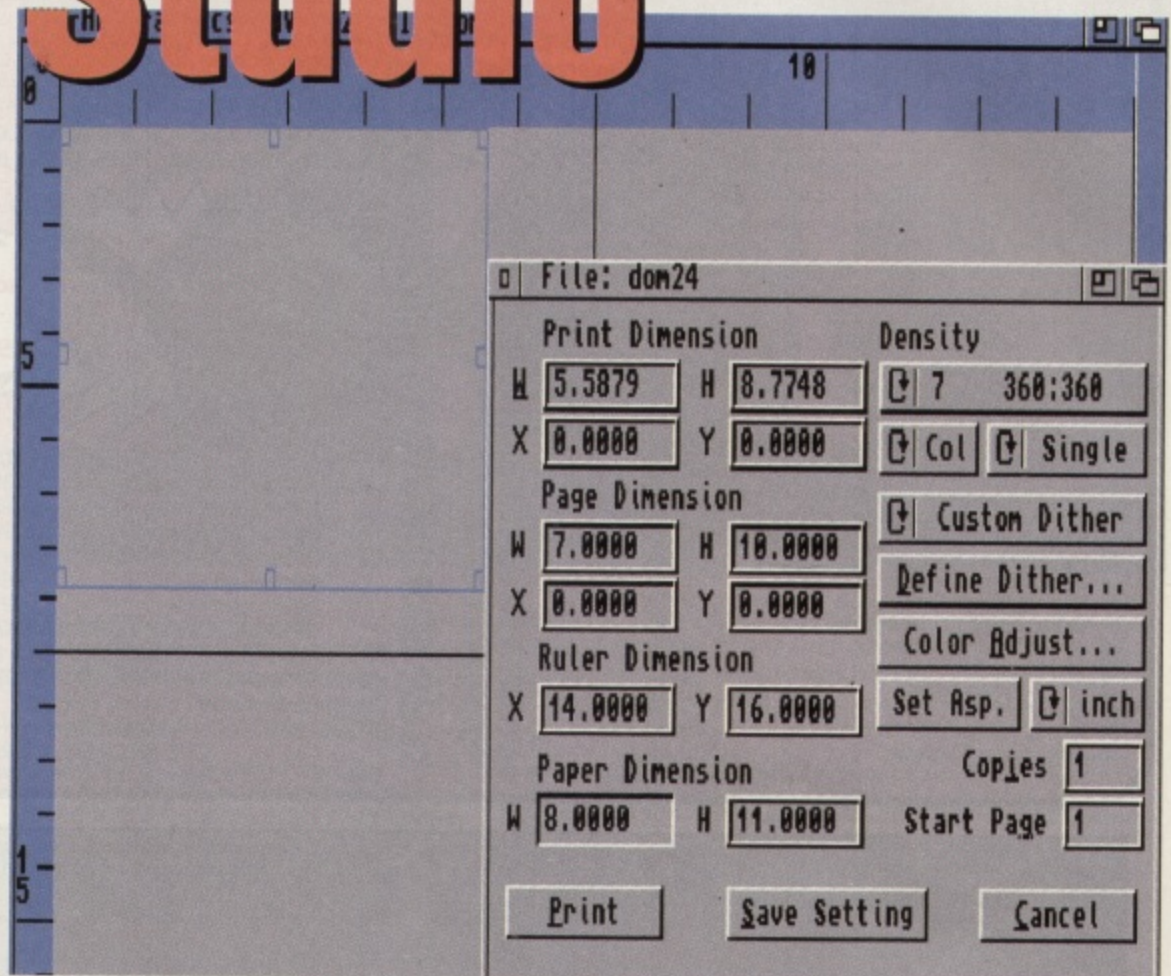

## A WOLF IN MULTI-COLOURED CLOTHING

Canon users will already be familiar with the name of Wolf Faust, the German programmer responsible for writing all of the drivers for the Canon printers, as well as the Workbench 2.0 downloadable font utility. Continuing his close affiliation with the company, Wolf has turned his attention to the problem of output quality.

The problem is primarily due to the 'intelligence' of current printer drivers in the way that they interpret screen colours. When a screen is printed, the printer driver looks at the colour of each pixel and converts it into an arrangement of dots known as a dither pattern. This pattern is then sent to the printer as a bit-map, with one bit-map being transmitted for each of the ribbon or ink colours that the printer supports.

The number of dots per square inch, and their relationship to each other, is determined by the resolution of the printer and the density level specified in Workbench Preferences. By creating different patterns of dots, and varying their distance apart, the impression of different shades can be created. This is an optical illusion, because even colour printers only use three or four different primary colours, which are mixed to 'simulate' more complex shades. Because most drivers cannot accurately calcu-

# Canon Print Studio

*Canon Studio* lets you get the best from your printer, whether you're printing 32 colour, HAM or even 24-bit screens. It uses a selection of 'intelligent' dither routines to represent a full palette of 16.7 million colours.

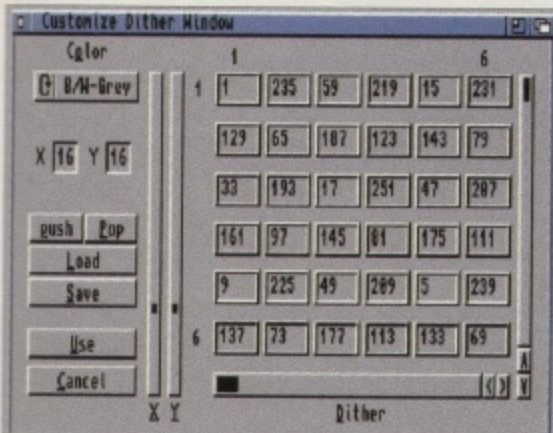

late dither patterns for more than 256 colours, printer output is at best an approximation of the screen image.

*Canon Studio* uses an advanced set of user-selectable and definable dithering algorithms to overcome this problem, and hence it allows your printer to 'simulate' a full 24-Bit palette of 16.7 million colours. To help ensure the best quality possible, the program also includes a range of colour and gamma correction and ink compensation functions which can be used to add contrast to dull or excessively light or dark screens.

## EASY TO USE

*Canon Studio* basically consists of three sections: Dump dimensions, image processing and driver configuration. Before you can print anything, you'll need to specify the size of the print-out. There's no maximum limit, so you can create massive posters hundreds of square feet in size if the urge takes you (and you have enough ink!).

Having specified the size of the print, you need to indicate whether you want to output the screen in monochrome or colour. The program supports colour separations, even so far as having specialised dither patterns to give the best quality. Although it defaults to the maximum resolution of your printer, you can tell *Canon Studio* to print at a lower density if you prefer.

For the demanding user, *Canon Studio* even lets you define your own dither filters.

The font design program lets Canon BJ10 and BJ300 owners convert Amiga bitmaps into downloadable fonts. Alternatively, you can use the program to design your own.

**SILLY PRICES  
FOR SERIOUS  
PEOPLE**

We carry a range of new and second hand computers, printers and other items. Amiga 500s from £150.00 - Printers from £35. Amiga videos for all areas of use ranging from music to programming.

**AMAZING PRICES  
FOR AN AMAZING  
COMPUTER**

Amiga PD we have over 1000 disks in our library prices start at just 75p. If you send your own disks, we will only charge for post & packing.

# **RBF SOFTWARE**

A NEWCONCEPT IN HIGH QUALITY LOW PRICED SOFTWARE HAS ARRIVED.

ARE YOU INTERESTED IN EARNING SOME MONEY FROM THAT PROGRAM YOU'VE WRITTEN?

WHY TAKE A ONE OFF PAYMENT TO HAVE YOUR HARD WORK PLACED ON A COVERDISK?

SEND IT IN TO US INSTEAD FOR A N ASSESSMENT OF IT'S TRUE VALUE.

WE WILL TEST IT THOROUGHLY AND IF IT IS ACCEPTED YOU WILL BE SENT A LEGAL COPYRIGHT CONTRACT AND FOR EACH UNIT THAT IS SOLD BY OUR DISTRIBUTIONS YOU WILL BE SENT A SHARE, WHICH, DEPENDING ON SALES, WILL BE PAID TO YOU EACH MONTH.

## **RULES AND OTHER INFORMATION**

ALL PROGRAMS SUBMITTED MUST USE LEGAL CODING AND INCLUDE A SIGNED DECLARATION STATING THAT IT IS THE THE AUTHORS OWN ORIGINAL WORK.

IT MUST BE CLEARLY STATED AS TO WHICH AMIGA SO IT FUNCTIONS ON (V1.3/V2 etc)

R.BURT-FROST HAS BUILT UP A WORLDWIDE REPUTATION THROUGH HIS ORGINAL PD LIBRARY KNOWN AS AMIGANUTS UNITED. (NOW TRADING FROM 12, HINKLER ROAD), AND IS ABLE TO OFFER THE POSSIBILITY OF WORLDWIDE SALES OF YOUR PROGRAM VIA AMIGANUTS UNITED AND ALSO OTHER AMIGA DEALERS THROUGHOUT THE GLOBE.

IF YOU HAVE ANY HESITATION AS TO THE VIABILITY OF SUCH A SCHEME THEN LET US TELL YOU NOW THAT ONE OF OUR CONTRACTED ANUTHORS namely Teijo Kinnunen, THE AUTHOR OF Ocyamed HAS EARNED THOUSANDS FOR HIS EXCELLENT WORK, SO WHY NOT YOU?

IF YOU HAVE WRITTEN A GAME, UTILITY OR WHATEVER, SEND IT TO:

Ray Burt-Frost 169, Dale Valley Raod, Hollybrook, Southampton. S01 6QX

(PLEASE RETAIN A DATED COPY OF YOUR SUBMITTED WORK AS SURETY OF COPYRIGHT)

## FONT DOWNLOAD

Canon BJ-10e/ex and BJ-130 owners may be interested to hear about a couple of new programs for their printer both of which perform the same function.

As you may be aware, most Canon printers can download fonts to replace the on-board defaults. Once downloaded, these fonts will remain active until the printer is turned off.

Ursa Software have written a special program which turns standard Amiga fonts into downloadable bit-maps. Better yet, you can even use their program to design your own fonts. Once a font has been loaded or designed, it is saved as a stand-alone file. When you wish to use a particular font, simply double click on its icon, and it will be automatically downloaded for you.

Twelve pre-defined fonts are included with the program, which can also be installed on a hard drive.

To be fair, Wolf Faust wrote a similar program about the same time as Ursa, but his version doesn't include a designer, and doesn't work under Kickstart 1.2/1.3.

Ursa's font designer costs £15 and they can be contacted at 11 Highwell Gares, Felling, Tyne & Wear, NE10 0NB. Tel: 091 438 3204.

Considering the fact that font cartridges often cost £30 or more each for a single typeface, this program is an absolute bargain for people who print a lot of text.

Now comes the most critical part – selecting a dither pattern. There are absolutely loads to choose from, starting with common ones such as Floyd-Steinberg and including evocatively titled patterns, such as Blue Noise and Stucki (the former being a description of what the dither does, and the latter being the name of its creator).

Each dither pattern produces different

## GETTING IN A BIT OF A DITHER

As I mentioned before, dithering is a method of positioning dots either as pixels on the screen or as blobs of ink on paper in a variety of densities to create the impression of different shades.

The simplest possible dither is alternating dots of black and white in a checkerboard pattern. In theory, this pattern simulates a shade of grey which is exactly halfway between the two colours. This type of dither pattern is known as ordered, and although it's adequate for certain applications, it tends to form very distinctive patterns which may sometimes be undesirable. For this reason, a whole variety of alternative dither patterns have been developed, with a variety of specific advantages and disadvantages. For example, Jarvis dithering enhances image sharpness, but tends to create dot 'clusters' near the middle of any area of solid colour.

The Blue Noise filter is particularly interesting because it deliberately introduces a margin of randomness into the resulting dither pattern. This 'noise' creates a granular image which looks as if you're seeing it through a sand storm! Not always useful, but it comes in handy when you're trying to be arty!

By using different dither routines, you can often enhance the image clarity, colour resolution or contrast. If you compare the two enlarged calculators, you'll notice that the coarser one appears to be in a lower resolution. This is because a much larger dither mesh was used to create it.

results, and is suitable for different applications. For example, Blue Noise is good for pictures with lots of blue shades in them, whereas Jarvis is good for pictures with contrast problems.

I personally found that the Floyd-Steinberg gave me the most satisfactory monochrome results, although the default custom driver produced a much more contrasting image.

## IMAGE ENHANCEMENT

Once you've selected a dither pattern, you can optionally perform image processing functions upon the screen. This can merely involve altering the RGB (Red, Green, Blue) components of an image, or you can apply gamma correction to alter the relative brightness of certain colour ranges within a screen (very useful if it's too dark).

At the bottom of the image processing screen, there are a couple of options that let you specify ink compensation values. These are needed because, when using coloured inks, the inks tend to contain components of other colours in them. For example, magenta will contain some yellow, blue will contain some magenta, etc. Unless these impurities are compensated for, the resulting image will not appear in its true colours.

Now all that remains is to print the selected screen. I used the '030 version of the program, and a 24-bit screen took about three or four minutes to print. Much of this time was taken up by the program calculating the dither and, on a normal Amiga, I would expect it to take at least 10 minutes to print a screen.

## GOOD PERFORMANCE

I was only using the program in mono, which gives 256 levels of grey scale, but I was very impressed. Using special bubble jet paper (which stops the ink smudging) and using a variety of dither patterns with a gamma correction of +25, I found that the print-outs were very clear and contained an excellent blend of greys.

Unfortunately, the printing process used for magazines may not be able to reproduce the dumps in all their glory, but hopefully these pictures will give you an idea of the quality.

Incidentally, there are three versions of the program: the restricted version can be freely obtained either from Canon, or a PD company of your choice. It only works with Canon printers and has no AREXX interface or poster printing functions. The unrestricted version costs £15 and can be bought directly from Canon. Although it still only works with Canon printers, it supports AREXX and has poster printing facilities. The final version will work with any printer, and is supplied with a large number of drivers. Apparently, it will also include additional image processing options and, of course, it works under AREXX. It will cost approximately £30, but a release date has yet to be specified.

## canon studio

- Prints 24-bit colour screens • Prints 256 grey shade screens • Prints straight from disk so only require 512k memory • Requires Kickstart 2 or higher • Special 68030 version • Prints posters of any size

Address: Canon UK, Canon House, Manor Road, Wallington, Surrey, SM6 0AJ. Tel: 081 773 3173.

## CANON £Various

'Enhances and prints Amiga screens (including 24-Bit images).'

This is the same picture with a Floyd-Steinberg pattern.

Dither patterns are vitally important when printing graphics. Here you can see the effects of a 30% Blue Noise pattern.

Finally, the same picture showing the effects of an ordered dither.

Bits maketh the image, but will your image suffer if you have less than a 24-bit display? As prices fall and more boards become available, Nick Veitch takes a look at what's on offer, and what you can expect from them.

# for a few bits more

## BOB'S THE WORD

In the beginning there was the bit. And the bit was good – well, it had to be, that was all there was. In the early days of computing people were easily satisfied with blocky resolution monochrome displays. Nowadays, if you're not more colourful than our publisher's language after half a shandy then you're not in the running.

Twenty-four bits of image data gives a total of  $2^{24}$  possible colours (or 16777216 colours). That means that there are eight bits of data for each of the red, green and blue colour channels (or 256 levels of brightness for each of them, which also means there are 256 levels of grey available).

Some boards actually have more than this available. The extra bitplanes (usually eight) are used

as an alpha-channel for the original image, and can provide keying and overlay data for the superposition of the framestore and Amiga images, or data to control an external source.

Such cards easily supercede the colour resolution of even the newest Amigas, because the information content rises logarithmically with the number of bitplanes, a 24-bit card has 65536 times more colours than the AGA chipset, and even 64 times more colours than the new 8-bit HAM mode.

## THE NEED FOR SPEED

One of the major difficulties with 24-bit displays is speed. If you think about it, instead of moving about a maximum of six bitplanes of data (as on a standard Amiga), the software controlling a 24-bit

Broadcast-quality 24-bit Amiga graphics have been with us for some time, but it's only now that OpalVision and OpalPaint have come together that we've been offered real creative power.

board has to move around data which is 24 bit-planes deep. This is not such a concern when you only want to display a static image, but animation is rather out of the question. Early 24-bit cards didn't try to address this problem at all. They were simply framestores, or buffers, which held the static picture data for display.

Today's systems allow more interaction. Whilst it may not be necessary to animate full screen 24-bit images (for a start, as well as a faster processor you would need a rather large amount of memory, especially as a 640x256 image would take up around half a megabyte of data on its own), it is necessary to be able to at least partially animate them.

The reason for this is that there are at least two applications which are the primary domain of 24-bit graphics that must allow a certain amount of animation on the display. Firstly, an art package would be completely unusable without a moving cursor or a moving brush (especially when using cut and paste custom brushes). Secondly, any sort of slideshow or display package is going to be rather dull if it doesn't have the ability to perform wipes and fades between displays.

Even manipulating small areas of the screen requires a lot of processor time. Most boards get over this by using custom processors to move the data around, but the data still has to be transferred across the bus, which is driven by the host machine's CPU. For this reason most cards these days exclusively use display RAM installed on the expansion card itself.

With powerful drawing tools and a palette of 16 million colours available for simultaneous display, OpalPaint opens up a whole new world of opportunities for the professional graphic designer.

# OPALVISION

It's been a long time coming. The OpalVision project, first started by an Australian company, was bought out by Centaur, the American company most notable for having given the world *Pixsound* (shortly before the world asked them to take it back again). It has been the source of much talk and speculation – some claiming it would be better than NewTek's Toaster, others that it would be critically flawed. Well, the speculation must end now as units are shipping, although not all of the advanced modules are available.

## OPALPAINT

The thing that makes a graphics system is not really the hardware, but the software developed for it. Admittedly, the hardware provides flexibility and features which can be taken advantage of in software, but it is only through the software that the user sees the evidence of the unit's power.

Centaur are doing well with OpalVision in those stakes then, because *OpalPaint*, the bundled art package, is probably the only 24-bit package available that correctly strikes the balance between powerful features and ease of use.

It would be hard to come up with a decent art package in this day and age that didn't bear some resemblance to *Deluxe Paint*. *OpalPaint* is no exception, with a similarly laid out tool bar (although this is horizontal across the bottom) and a great degree of hot-key compatibility, which makes it very easy to use from the outset.

The first impressive feature is the implementation of a textured drawing mode. It's very similar to a package found on the PC, *Fractal Design Painter* (costing a PC price of £299) and allows you to simulate drawing with different materials onto a different surface. The samples include very realistic chalk, watercolour, pencil, fibre-tip and airbrush simulators. Each will impart its own characteristics: the chalk is more dense towards the centre of the brush and where there are ridges in the paper, the watercolour is very washy and runs out during the stroke, etc. The 'paper' type will simulate varying degrees of roughness and texture, which will pick up the peculiarities of any brush type.

The 'artistic' approach stretches even to the palette requestor, where pre-defined paints can be mixed and blended together, as on a real palette. RGB and HSV sliders are provided for the more mechanistic types, as is a complete spectrum in a box. Sample palettes are included with *OpalPaint*, just in case you find it hard to get the exact colour you're after. As with IFFs, these can be saved with little 24-bit thumbnail previews, which will be displayed in the loading requestor.

There are also a number of impressive drawing modes, ranging from the *D-Paint* style smear to some completely new modes such as posterize, which reduces the dynamic colour range to a smaller (user specifiable) number of colours. Graduated fills are available with even more options than available in *D-Paint*. Brush fills are also present but add a 'warp' feature which allows the brush to be mapped onto a sphere.

One of the most impressive features of *OpalPaint* is its font control. Although it won't allow you to actually type on the screen (like *D-Paint*) it can use all scalable Workbench fonts and will even anti-alias them properly onto the screen (if you remember to set the right mode).

The brush manipulation is adequate, but not outstanding. It is understandable that you only see a ghosted mono outline and image of the brush when moving it around the screen (as stated before, it is quite a strain on the processor to move the vast sums of data quickly enough to be able to display the full 24-bit glory of the brush as it moves across the screen. The usual brush sizing and handling options are the same as *D-Paint*, activated by right-buttoning the brush gadget. Three brushes are allowed, but there are no impressive re-mapping functions, as were found on very old paint programs such as *Spectracolour*.

At the moment, OpalVision is only available as a card for the video slot of the A1500 /2000 /3000/4000, but a future version is planned for the parallel port, which will enable connection to the A500, A600 and A1200 machines. This will be slightly slower, as even on the parallel port the speed of data transfer will not match that of the Video Bus. All the software will still work to a reasonable level of speed though – but remember that you will need a Hard-drive.

## FUTURE ATTRACTIONS

OpalVision isn't really finished yet. There are a few options in the pipeline already. Because the system is very much a closed loop graphics workstation, a framegrabber and genlock module is due to be brought out soon. This will give the unit a better standing in the multimedia stakes, as it should be possible to create real-time video effects and control the image characteristics through OpalVision.

The other piece of hardware coming soon is the strangely named Roaster, a custom chip which conjure up visions of little packets of peanuts or lovely golden-brown spuds. The Roaster is actually a custom processor, designed specifically to handle real-time warping and morphing effects, which could be particularly useful when combined with live video input.

## OPALVISION

... at a glance

- True 24-bit framestore • 28MHz RISC graphics processor • Standard 23-pin Amiga RGB output
- 8-bit alpha Channel • Stencilled Workbench backdrops • Simulated Artist's tools in Opalpaint
- Easy to use presentation software

## TOP VALUE 400dpi HANDY SCANNER

QUALITY SCANNING - AT THE RIGHT PRICE!

At a genuine 400dpi scanning resolution, this scanner produces truly superb quality scans. Has a full 105mm scanning width, variable brightness control and 100 / 200 / 300 / 400dpi resolution. Datascan Professional Version 3-scanning and editing software allows real-time scanning in either line art or in up to 64 simulated grey scales. Provides powerful editing features and excellent compatibility with most DTP and Paint Packages, eg. Deluxe Paint 4, Touch-Up. Also supplied is The Publisher DeskTop Publishing package, ideal for incorporating your scanned images into flyers and newsletters.

**STILL ONLY £99.99**

## TRUEMOUSE

WE GUARANTEE that this is the smoothest, most responsive and accurate replacement mouse you can buy for the Amiga. Excellent performance, now with a 300dpi resolution. Amazing new price!

**£14.99 SATISFACTION GUARANTEED**

GOLDEN IMAGE OPTICAL MOUSE Amiga/ST compatible - excellent travel+accuracy assured. NEW LOW PRICE!.. £29.00

## TRACKBALL

High performance trackball, directly compatible to any Amiga or Atari ST. Plugs into mouse or joystick port. Super-smooth and accurate - you probably won't want to use a mouse again after using this Trackball! Full one-handed control. Top quality opto-mechanical design, giving high speed and accuracy every time. No driver software needed!

**ONLY £29.95**

## NEW! A500 ROM SWITCHER

SWITCHING BETWEEN VERSIONS OF KICKSTART ON YOUR A500 IS EASY WITH OUR NEW ROM SWITCHER!

You can improve software compatibility on your A500 Plus! By fitting our ROM switcher, you can alternate between the Kickstart 2 already resident and another version of Kickstart ROM chip, giving you the freedom of choice. Fitting is very simple indeed, and requires no soldering or special technical knowledge. Fitting allows two methods of switching: either by keyboard reset, or by an external toggle switch. N.B. Kickstart ROM not supplied. A500 Revision 5A boards will require circuit modification.

**ONLY £24.95**

Kickstart 1.3 ROM supplied separately	only £29.95
Kickstart 2.0 ROM supplied separately	only £39.95
A500 Revision 5A PCB Circuit Modification Service	£29.95

## ZY-FI Amplified Stereo Speakers

REALISE THE TRUE SOUND POTENTIAL OF YOUR AMIGA WITH THIS PAIR OF FULL RANGE SPEAKERS!

Your Amiga produces fine quality hi-fi stereo sound. Enjoy quality stereo sound reproduction to the full with this new design twin speaker system! Incorporates a built-in amplifier with separate adjustable volume controls for each speaker unit. Runs from PSU (supplied) or from batteries (not included). Speaker Dimensions 160x95x105mm (HxWxD)

**ONLY £39.95**

# 3D CONSTRUCTION KIT II

Does Incentive's new tool build on the success of its forerunner? Tony Horgan dons hard hat to find out.

## FREELY BUILT

Way back in the mists of computer gaming history, Incentive developed Freescape, a solid 3D system that was to be used for a series of arcade adventures. After flogging their once-healthy horse into an early grave, Incentive decided to let the public have a go at designing their own 3D adventures, by releasing a more user-friendly version of their own game creation utility. Now, just when you thought the Freescape stallion had been put out to pasture, along comes *3D Construction Kit II*.

As before, the idea with *3D Kit II* is that you can create a whole new world, or even a series of worlds, which can then be explored on foot or by air. As well as passive objects, such as buildings, monuments and natural scenery, you can also create 'live' objects. These could take any form you like, and it's these that introduce the game element. After all, what 3D adventure would be complete without its quota of Daleks, trip-wires and trap doors?

## FILL IT UP

It all begins with an empty world, so the first thing to do is get an object up on screen. You can choose one from the list of basic cuboids, cones and spheres, or load up one of the more complex objects included on the second disk. Fortunately, any object can be edited on the 3D view, so there's none of that confusing top, plan and side view editing that's common in 3D rendering packages.

Using the icons along the bottom of the screen, you cycle through the points, pulling any of them in any direction. You can also stretch the whole object along any axis. As a result, it is possible to create just about any shape you can imagine, so long as it's constructed of straight flat edges or spheres. By joining simple blocks together, some extremely detailed constructions are possible. All the time you're editing your objects, you're free to walk or fly around them, using the same controls that you'd have in the finished game. Once that's done, it's on to the next object.

What elevates this from a 3D design package to a 3D game creator, is the programming language that governs the movements, actions and reac-

Add your own sound effects to your games with the SFX editor. Even if they're not up to much, you can spruce them up with the various special effects available.

From small acorns, mighty oaks and all that... Even the most complex construction is made from one of these simple building blocks.

tions of all the game's objects. This has been expanded to include twice as many commands as in the first *3D Kit*. Using the language, which is akin to a cut-down form of BASIC, you can define time limits, tell the program what to do if a certain object is shot, and so on.

## GETTING DIFFICULT

It's here that *3D Kit II* begins to veer off from its novice-friendly track. If you've never had any programming experience, this could be quite a stumbling block, but anyone who's dabbled in coding shouldn't have much trouble getting the hang of it. The up-side of this, is that it allows you to get a lot more flexibility out of the system. You are able to come up with completely original games, so long as you've got the imagination and the time to realise it.

One other thing you'll need is patience. Because everything is done in realtime solid 3D, it can be rather slow. Sluggish response when clicking on icons and menus can be a pain in the neck. It doesn't help that most of the icons have no visual response, so if nothing appears to be happening, you often can't tell if your mouse buttons are up the spout, if the program simply hasn't registered your click, or if it has registered and is getting on with the job.

Rather like *AMOS*, *3D Kit II* uses sample banks for its sound effects. To help you compile these banks, there's a separate program on the first disk called *3D Sound*.

This new addition to the package doubles as a sample editor and a bank creator, and includes a number of effects including chorus, reverb and echo, which can be used to process your samples.

## LOOKING FOR CHANGE

The trouble with most game creators, such as *Shoot 'em up Construction Kit*, is that they're only really capable of producing one game. If you've played one *SEUCK* game you've played them all. While anything you write with *3D Kit* is always going to look like a *3D Kit* game, there's still quite

Once you've got your basic object, you can bend and stretch it until it begins to resemble something vaguely interesting.

## WHAT'S NEW?

- Here's a brief summary of the main new features.
- Command language now twice the size
- Supports spheres and 'flexicubes'
- New distance-fading function
- 100 clip-art objects
- Dials available for control panels
- Separate sound editing module
- Debugging utility
- Improved rotation resolution (1 degree minimum)
- Animated borders
- Multiple borders

a lot of scope for different types of game.

The player's input is limited to walking or flying around, and destroying, activating or picking up objects by shooting them. Even so, with some imagination, some quite diverse and in-depth adventures can be achieved. The main thing to remember is that you're not stuck with the same old space scenario. Why not try basing the game around the film *The Great Escape*, or *Fantastic Voyage*? You could even have it set in drab old 20th Century London, with all your favourite landmarks in glorious 3D.

Just how complex your games are is down to you. You could go on adding objects and details to a scene indefinitely, but the more detail you include, the slower it gets. I'm told the 3D routine has been speeded up, but it looks just the same to me: quite slow even with simple objects on screen, and very slow when it gets busy.

## WHAT ABOUT PROGRESS?

Considering this is a version 2 release, I would have expected quite a lot more in the way of improvements. With the exception of the expanded command language, the differences between this and the original program are mostly rather superficial and insignificant. Now you can rotate to an accuracy of one degree, animate the borders, and include dials in the score panels. I can't see that lot getting many *3D Kit 1* users foaming at the mouth with anticipation. Where's the appreciable increase in speed, the exterior views, the improved interface and so on?

There's no doubting that *3D Kit II* is a very powerful program, as was the first version. The trouble is that it's not as impressive as when it was first released, and there's very little to persuade owners of *3D Kit 1* to upgrade. Registered *3D Construction Kit Club* members will be able to upgrade for a discounted sum which, as we go to press, is still to be set. If solid 3D is your thing, and you're looking for something to get you through those long winter nights, then give it a shot, but seasoned *3D Kitters* may well be disappointed.

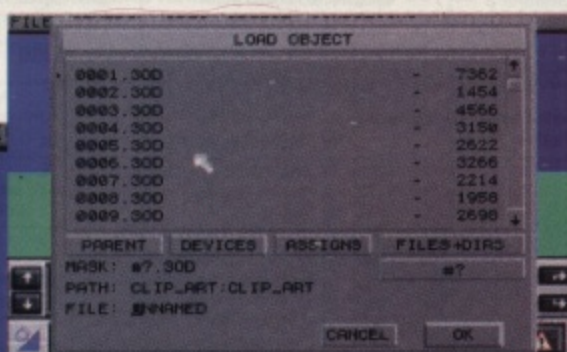

A lot of bending and stretching, cutting and pasting later, you might come up with something like this fighter plane, or even this exciting bus! I suppose you could use it in an Amiga version of *The Italian Job*...

If you fancy something a bit more ominous, have a go at building some tower monoliths or skyscrapers. Use the 'look up' icon to give it all a dramatic perspective.

You know what they say about mighty oaks growing from acorns? Well this acorn has just sprouted a shoot. It wants to be a tower block when it grows up.

If you're feeling lazy, you can load one of the 100 clip art objects supplied on the second disk. Whether you're creating a science fiction space epic, or a gothic thriller, there's something here for all occasions.

## 3D CONSTRUCTION KIT

... at a glance

- 3D game creation utility
- Few updates from version 1
- Fairly slow
- Has its own programming language
- Hard drive compatible
- Includes sound fx editor
- Creates stand-alone games

Address: Domark, Ferry House, 51-57 Lacey Road, Putney, SW15 1PR. Tel: 081 780 2222.

## QUALITY AMIGA PERIPHERALS WITH A 2 YEAR WARRANTY

Silica Systems are pleased to present the GVP range of peripherals. GVP are the world's largest third party manufacturer of peripherals for the Amiga range and have a reputation for high specification, quality products. The company was founded only four years ago by a man who knows about the Amiga, Commodore's ex-Vice President of Technology. He, along with a team of Amiga experts including other ex-Commodore staff, understand the add-on requirements of Amiga owners better than anyone. Not only do GVP provide peripherals that Amiga owners want, they also offer peace of mind, with a 2 year warranty on the products they manufacture. So, if you are looking for the very best in peripherals for your Amiga computer, look no further than GVP.

## PC EMULATOR PLUG-IN OPTION FOR HD8+ & A530

- 16MHz 80286 processor
- 287 Maths Co-Processor socket
- 512K of PC RAM plus the use of Amiga RAM
- Supports Hercules, CGA, EGA/VGA (monochrome) and T3100 video modes
- Runs MS-DOS (3.2 and upwards) plus thousands of other PC programs

This powerful 286 emulator module simply plugs into the "mini-slot" of the GVP HD8+ or A530 (without invalidating the warranty). It has full access to the Amiga's resources and allows you to run PC and Amiga programs at the same time, giving you two computers in one.

# AMIGA PERIPHERALS

GVP's HD8+ hard drive and A530 hard drive with 40MHz accelerator, represent the highest quality Amiga 500 peripherals, at very affordable prices. Each incorporates a fast action hard drive, RAM expansion capability, custom VLSI chip and FaaASTROM SCSI driver, for unbeatable performance.

The HD8+ hard drive offers up to 8Mb of standard internal Fast RAM expansion and the A530 Combo, up to 8Mb of 32-bit wide fast RAM expansion. Both feature a SCSI controller, which supports up to 6 additional devices, and an Autoboot/Game cut-off switch. Both are available in 80, 120 and 213Mb hard drive versions.

In addition, the A530 Combo zooms the Amiga forward with an 030 accelerator, running at a blistering 40MHz. This enables your Amiga 500 to run at an incredible 12.1 MIPS, faster than an Amiga 3000! No other product in the world combines all the features found in the A530 Combo! A plug-in PC emulator option, shown below, is available for the HD8+ and A530 Combo.

## PRESS COMMENT:

# Zappo Dataflyer Express Hard Drive

If you're still struggling with hundreds of floppies, Tony Horgan looks at one of the ways to relieve your burden.

## FLOPPY NIGHTMARES

If you use your A500 for anything other than games, you've probably had enough of AmigaDos and Workbench to last you a lifetime. Forget tennis elbow, what you've got to worry about is how to avoid disk-swapper's wrist. If all you've got is the single internal floppy drive, you're on course for Wind-up City Arizona, as the system constantly demands you insert this disk, that disk, this one again and so on ad infinitum.

Anyone into graphics, music or programming will no-doubt be familiar with the nightmare of shuffling through hundreds of disks, trying to decipher the scrawl on the labels, in an attempt to find that elusive file you created a couple of weeks ago. By the time you've found it (if you ever do), you've probably forgotten what you were going to do with it in the first place! One tactic is to get yourself an extra floppy drive or two, which would at least ease the disk-swapping, if not completely cure it, but you'd still have to root through that scale model of Manhattan that you call a disk library. The other option is to get a hard drive, and improve your machine's efficiency by a mile.

## SPOILT FOR CHOICE

There are a number of hard drives around for the A500 and A500 Plus, all based, at least aesthetically, around Commodore's own A590 unit. Zappo's addition to the market comes with 40, 80 or 120Mb disk storage capacity, with either 2, 4, 6 or 8 Mbs of fast RAM, or just an unpopulated board for you to fill with RAM as and when you need to. If you take it upon yourself to populate the board yourself (add additional RAM), you'll find it takes standard fast

RAM SIMMs (Single In-line Memory Modules), which can be accommodated in multiples of two, up to a maximum of 8Mbs.

Unlike most of its rivals, the Zappo drive doesn't go out of its way to blend in with the Amiga. Instead, it's housed in a plain steel beige box, featureless except for the ventilation slots and the power and activity LEDs. Not the most stylish unit, but certainly no eyesore, and if you should drop your monitor on top of it, you'll be glad it's got more than a flimsy piece of plastic between the internal workings and the outside world.

Although hard drives make life a lot easier, setting them up in the first place can often be a headache. Fortunately, the Zappo drive comes pre-formatted. All you need to do is plug it in, switch on, and it autoboots to Workbench all by itself; how pleasant. As usual, if there's an autobooting disk in the internal drive, the machine boots from that rather than the hard drive, so all your games should still work fine. If you have any problems with the extra memory causing games to crash, you can disable the RAM in the hard drive by holding down the left mouse button as you power-up.

If you want to be able to expand your system further, there's a SCSI through port, and provision for an external PSU, should your set-up get too power-hungry. Coming in at a penny under £300 for an unpopulated 40Mb drive, and £349 for the unpopulated 60Mb version, the Dataflyer is one of the better value hard drives around, and its performance can't be faulted.

## DATAFLYER

... at a glance

- 40/60 meg external A500/A500 Plus hard drive
- Provision for up to 8 megs fast RAM (SIMMS)
- Sturdy metal casing
- IDE connection
- High speed data transfer

## DESCRIPTION

The Amiga A1500 Pack

The NEW Commodore Amiga 1500 Pack features a 7.14MHz 68000 processor with 1Mb RAM as standard (expandable to 41Mb via expansion cards). It includes two 880K 3.5" floppy disk drives and can support PC emulation by an XT/AT bridgeboard or ATonce Plus. The Amiga 1500 contains 3 co-processors (Denise, Agnus, Paula) to enhance sound, graphics and animation. It also includes 9 internal expansion slots. Interfaces include: Parallel - Centronics, Serial - RS232, Video - RGB Analogue, RGB Digital and mono Composite, Right and Left Audio, 2 x Mouse/Joystick controller ports and an external drive port. It also includes a multi-tasking WIMP operating system, a colour palette of 4096 colours, high quality stereo sound with 4 channels and 9 octaves and text to voice synthesis. This package does not include a hard drive and is available with or without a monitor.

## DIGITAL ASSAULT

As one of the old troopers in the world of Amiga digitising, Rombo's Complete Colour Solution has been one of the most popular digitisers available, offering a combination of quality and affordability. Now they are set to make an assault on the digitiser market that may leave all other non-professional systems for dead, including their own!

What's so special about it? Well, three main things: its superlative image quality, its low price and its comprehensive image processing tools. But enough of the rhetoric, let's take a closer look and you can decide for yourself.

## THE RIGHT CONNECTIONS

The Vidi 12 hardware is a small unit barely larger than a packet of cigarettes which plugs into the parallel port at the back of your Amiga, covering the serial port at the same time. Not to worry though; for £4.99, you can buy an extension lead enabling you to use the serial port as usual. Owners of either Rombo's digitiser or colour splitter will recognise the unit because they all have identical casings. At the back of the unit you'll find both composite video (phono-type) and S-VHS sockets. This means that you can connect Vidi 12 to virtually any modern video recorders or camcorders.

To the side of the unit there's a brightness adjuster, but this is deeply recessed as it's unlikely to be needed. The unit is factory preset, and unless you have unusual requirements it's simply a case of plug-in and go. Incidentally, the hardware draws its power from the Amiga's disk drive port, or from the through-port of an external disk drive. This means that if you own a second drive that doesn't have a through connector, it will need to be unplugged while you're digitising.

## SOFT OPTIONS

Having dealt with the hardware, we come to the most interesting part – the software. As you would

The clarity and colour of this frog picture show Vidi 12's capabilities off to a tee.

**Rombo are about to release an exciting low-cost high-performance colour digitiser. Mat Broomfield gives it a test run.**

Although the original picture is of excellent quality, it can be improved further with special effects. On HAM images, the psychedelic and negative effects are quite similar, but in lower colour resolutions psychedelic produces spectacular solarising effects. The quantised image looks much bolder than the original, and could be useful for printing purposes. The edge function provides a quick method of converting screens into outline images

# vidi 12

expect, the software can be run from floppy disk or can be installed on a hard drive.

The software consists of five sections: Preferences, Grab Control, Editing, Carousel and File Management. Because Grab Control affects each of the other sections, we'll take a look at that first.

## AN ORGY OF CHOICE

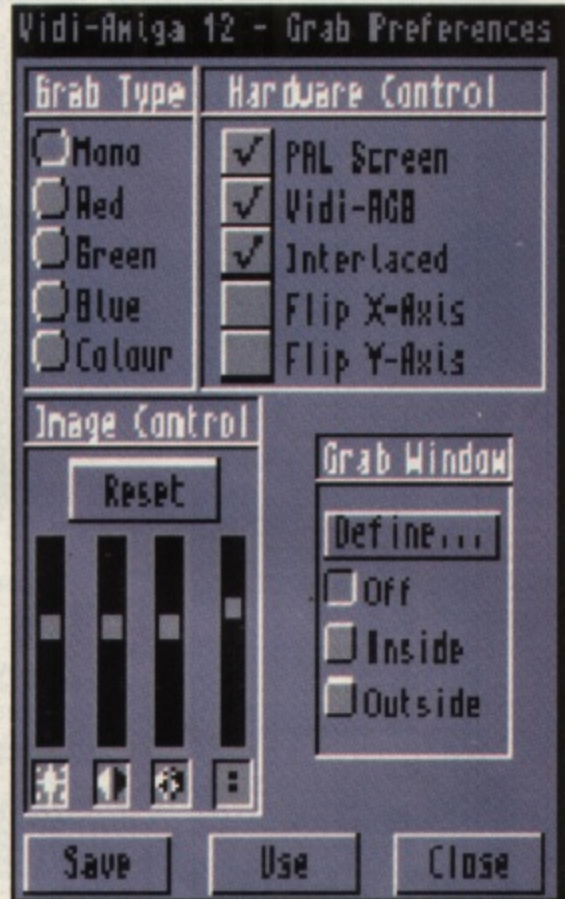

When you select Grab from the main screen, the display switches to reveal the Grabber Control Panel and view screen. Provided you're connected to an appropriate video source, the view screen will show you a grey scale representation of whatever is being transmitted by the video camera or player. Vidi 12 offers an impressive array of digitising options ranging from low resolution two colour images, to overscanned 256 colour and HAM-E pictures in high resolution. Before you digitise anything, you may select the required screen format and number of colours by clicking on the Mix button. This calls up a secondary requester which lets you independently set screen resolution and number of colours. It also lets you decide whether or not to use Error Diffusion, which is a form of dithering (stippling as Rombo calls it) that creates a greater number of apparent colours than the palette contains. This feature works exceptionally well, and although not required for HAM, HAM-E or 256 colour modes, it really adds to the quality of images digitised in 64 colours or less, and is especially effective in high resolution.

Having selected the screen resolution and num-

Vidi 12 has some excellent dither routines, but you'll need to choose a resolution appropriate to the image you're capturing. The fox is in low resolution, but uses a 64 colour palette, but for really fine detail, the Dune picture uses 64 colour interface mode.

ber of colours, it's back to the Grabber Control Panel where you can further specify the way that a screen is to be captured. Like all digitisers, Vidi 12 actually captures a coloured image as three separate screens: red, green and blue. These screens are then combined internally to produce the full-coloured result. If you are capturing for colour separation work, you can grab each of these colours individually or, if you prefer, you can simply capture a grey scale image. Whatever you decide, you can manually adjust the overall brightness, contrast and saturation of the image using the sliders provided. These replace the dials that were so fiddly to adjust with the Complete Colour Solution. For most purposes, you shouldn't need to adjust the sliders at all, but if you decide that you prefer different settings, you can save your preferences so that they become the defaults.

With the Grab Preferences sections you can specify the screen format, and if you like, these preferences may be saved so that they become the new defaults.

Even with an ancient videocamera and poor lighting I was able to digitise this CD cover in a couple of seconds.

## CAPTIVE IMAGES

All that remains is to specify the way that the image is to be digitised. The easiest method is Grab-Mix-View, which automatically captures all three colour components, mixes them, and displays the resulting screen in the format of your choice. Alternatively, you can select Single Grab and take over the mixing and display operations for yourself. The final option, Continuous Grab, allows you to record a sequence of frames (possibly for animation use). This feature is only really practical if you are capturing low resolution grey scale images, for these are the only images that the system can record with sufficient speed. Whilst Vidi 12 can capture a frame in 1/50th of a second, it takes a further 17/50ths to process it, giving a maximum capture rate of 2/5ths of a second, or

**How to order cheque/PO made payable to CARE ELECTRONICS or use Access/Visa**  
**Care Electronics 15 Holland Gardens, Garston, Watford, Herts WD2 6JN**  
**Tel: 0923 894064 or Fax: 0923 672102 all prices include VAT & CARRIAGE**

The carousel lets you view animations or select single screens. It's also useful for getting rid of any badly captured frames.

You can access the various sub-programs within Vidi 12 from the main window.

five frames every two seconds.

One point about which I felt slightly misled is the package's claim to capture a full colour image in less than a second. To be absolutely fair, it really does perform at this speed, unfortunately it can take between 20 seconds and two minutes (depending on screen format) to mix the colour components together. Nevertheless, this means that if you have an impatient subject, or a dubious video player, the information is recorded almost before you can take your finger off the mouse button, then it's simply a matter of waiting while the program performs the necessary mixing calculations.

## UNHAPPY? ME?

Now you may be getting the impression that I'm less than happy with Vidi 12, but that's not the case; far from it! I think that the system represents an exciting breakthrough in terms of price, image processing options and image quality. It digitises with an intelligence that I've never seen on the Amiga before, working overtime to squeeze every single drop of colour and clarity from your specified screen resolution and palette.

Once you've digitised an image or series of images it's time to return to the main menu, where the last frame to be captured will be displayed.

You can now use the Carousel to view either individual frames or animated sequences, which can be replayed either forwards or backwards. It also lets you select individual frames for further editing.

## IMAGE PROCESSING

The Edit menu is a very interesting part of the program for it contains 11 image processing options that can be used to alter the current screen. The way that these options work depends primarily on the screen format of the captured image, although the subject matter itself can make a big difference. For example, the Edge Detect feature is used to convert a normal image into a line drawing. It seems to work by detecting colour boundaries, using those as the basis for its lines. Now obviously, if this is used on a cartoon image with nice clear areas of colour, with distinct borders, it can

be very effective. However, try using it on a HAM image of a forest and you'd find that it's unable to accurately differentiate between the varying shades of green. This is not a shortfall in the program, it's simply an inevitable limitation of the process itself. Similarly, if you try to use smooth on a 16 colour high res screen, it's unlikely to yield impressive results due to the restricted palette. Perform the same operation on any HAM screen and the results can be dramatic.

Five of the image processing options are related to smoothing, diffusing and otherwise softening an image, but there are a number of other useful ones including negative, emboss, psychedelic, sharpen, threshold and quantise.

Most of the facilities seem to produce good results when used on HAM images and this comes as no great surprise as that's what the program was primarily designed for. The program also has an impressive Undo feature which will undo the last image processing operation. This is so intelligent that you can even leave the Image Processing section, save the screen, re-enter Image Processing and still be able to undo the last operation. Now that's what I call a good memory!

You can also load and process any standard IFF screens, not just those were digitised with the program.

When you're happy with your efforts, all that remains is to save them. Vidi 12 will automatically save them in whatever format they were originally captured or loaded. It can even store normal and HAM mode animations ready for editing in D-Paint.

## CONCLUSION

Rombo sent me a number of images that they digitised with the system, and to be frank, they were stunningly good. Try as I might, I couldn't quite reproduce their quality, but I was easily able to record images that were as good as any I've ever created. I have a strong suspicion that my failures were due to inadequacies in my digitising set-up rather than Rombo's hardware.

Rombo take great pains to ensure that their hardware will work with just about every conceivable set-up, and although I experienced some

More specil effects, this time Sharpen has been used to increase image clarity, whilst Threshold has been used to 'vogueify' it.

problems when using an '030 accelerator and capturing in interlace, they are currently beavering away to fix the bug before the program is released.

Vidi 12 is a very easy digitiser to use, and it gives unequalled results for anything within £200 of its price. There are many dedicated image processing packages that cost more, and its image processing features only add to its flexibility. This is a definite contender in this year's value for money hardware stakes. Forget the competition, if you can afford Vidi 12, buy it. If you can't afford it, borrow it from someone who can!

## VIDI 12

... at a glance

- Budget video digitiser • Supports all screen formats including HAM-E and 256 colour
- Amazing quality images • Easy to use

The Grabber Control Panel is where you actually capture images. It is preset and you shouldn't need to make any alterations, but if you require different settings, you can alter the brightness, contrast, and colour saturation levels, and you can even change the picture's vertical position and flip across either axis.

# WHAT ARE WORDS WORTH?

**Word up! The wily word processing wizards at Digita International have made their Wordworth system even better. CU has 10 copies and they're up for grabs in this incredible competition.**

**WIN  
A WORDPROCESSOR  
WORTH  
£130**

Digita Wordworth 2, released earlier this month (priced £129.99), is a WP programme which includes a mighty array of impressive features:

- It produces on-screen letters with smooth outlines, ranging in size from 4 to 1,000 points.
- Wordworth Version 2 contains 17 Agfa Compugraphic fonts, and can use Digita ColorFonts, Workbench 2 outline and bit-mapped fonts, ColorFonts, and PostScript fonts.
- Colour and mono clipart may be incorporated into Wordworth, and are available separately.

• Columns for text, indexing, end notes, better mailmerge and file support, bookmarks, and text sorting are just some of the 100 additions making Wordworth 2 supercede its predecessor.

• Many of the new features of Wordworth 2 result from the suggestions of more than two thousand users of the earlier Wordworth who completed questionnaires for Digita.

• The ease of use of the tool bar was improved following tests conducted in association with the University of Wales.

• Extras available for the package include two volumes of clipart, £9.99 for mono and £14.99 for colour, and a set of colorfonts (four fonts at three sizes), for £9.99.

Tempted? We thought so. 'How can we get our eager hands on them', you cry.

Here's how: just compare and contrast the two pictures pictured above, spot the four intentional differences between them, fill in the coupon provided (along with your name and address) and send it to us. The first 10 correct answers picked out of the hat (or box, or bag) grab the goodies. Easy, or what?

Well? What are you waiting for? Get your magnifying glasses out, you eagle-eyed word-smiths.

## WHAT ARE WORDS WORTH?

NAME: .....  
ADDRESS: .....

The four blindingly obvious differences between the two pictures are:

- 1: .....
- 2: .....
- 3: .....
- 4: .....

Cut out the completed form and post it to: What are Words Worth?, CU Amiga, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU.

All entries must be received on or before Tuesday 5 January 1993. Only one entry per contestant is permitted, and the Editor's decision is final.

### GREAT DEAL

For all you would-be Wordworth 2 word processors who don't win a copy, or just can't wait, there's the opportunity to upgrade your existing WP packages. Registered Wordworth users may get Version 2 for £49.99 (which includes £25-worth of Wordworth extras), whilst - for November only - possessors of any WP system may upgrade for £59.99 (contact Digita International regarding upgrades, not CU).

## HOW TO USE THIS AD

For the first time ever, you can choose your own hardware and software combination, and still benefit from the huge savings only available from package deals.  
Want an A500 with 1500 software? No problem!  
Like an A1500 without games? It's up to you!  
All we ask is that you choose at least 1 software package when you order your hardware (optional on CDTV A1200, A3000 or A4000)

# CDTV ROU

**KARAOKE HITS VOLUME 1**  
Music Machine Marketing,  
Price: £19.99, Tel: 0204 387410.

Oh, how we laughed when the local boozer hired out a karaoke machine for the night... how we sighed with disappointment when it turned up the following weekend... how we abandoned the former Saturday night hot-spot when it became a regular feature. Nauseating as it is, karaoke is still doing a good trade in pubs up and down the country, so if you fancy making a few quid from your CDTV, why not try transforming it into a karaoke machine?

*Karaoke Hits Volume 1*, from Music Machine Marketing, is a 21-track disc with an idiot-proof user-interface. Seeing as there's nothing to do but select the song and hit play, it's easily operated from the keyboard or control pad. Songs included are the usual mix of old rock and roll, ballads, and country tunes: Oh Carol, Diana, Da Doo Ron Ron, It's My Party, His Latest Flame, In the Ghetto, Good Luck Charm, I Only Wanna Be With You, Who's Sorry Now, Stand By Your Man, The Young Ones, Bachelor Boy, On the Beach, Will You Still Love Me Tomorrow, Rose Garden, Something in my Heart, My Special Angel, Sugar Time, It's Only Make Believe, and Sweet Nothings.

The songs vary in quality, with some including backing vocals and sounding very much like the originals. Others are less impressive, leaving you to hum half of the music yourself. There's nothing in the way of graphics, which is a shame, so all you get on screen are the lyrics which light up in time with the music. There is, however, a genlock option, which you could use in conjunction with a video camera, mixing live pictures of the singer, the crowd, or a separate video source with the lyrics.

It's a shame there are no graphics. A static picture at the very least wouldn't be too much to expect, seeing as there's not exactly a shortage of space on a CD.

As a piece of home entertainment, *Karaoke Hits* is a bit of a waste of time. You may as well just put your favourite record on your hi-fi and sing along with that. As a tool for transforming your CDTV into a karaoke money-making machine, it's not bad at all. All you need now is a PA, a mike with a two minute long echo on it, and you're off. Just don't forget your earplugs.

**80%**

**LEARN FRENCH WITH ASTERIX**  
SWANFAST COMPUTERS,  
Price: £69.98, Tel: 071 731 0846.

How school kids are supposed to learn to speak French by reciting hundreds of verb endings is beyond me. This two-disc set aims to assist the learning of French in a rather more entertaining way, and is quoted as being suitable for anyone from 15 to 50.

Most of the discs are taken up by a talking book. Digitised illustrations from the original Asterix books are accompanied by the voices of French actors playing the parts of Asterix, Obelix and all their friends. With the default settings, the speech bubbles are left blank, and you're left to decipher the story from the French speech. If you need a bit of help, you can opt to fill the speech bubbles with French text, English translations, or even get a word-by-word breakdown of everything that's said. This is the most useful feature, as it helps you get a better understanding of word order, vocabulary and general phrase construction.

Also included is an 'interview' section. Here you can choose questions from a list, and direct them at either Asterix or Obelix. Both the questions and answers are spoken in French. If you have a sampler cartridge and microphone connected (such as Microdeal's Voice Master covered here), you can listen to a phrase, speak it into the mike, and then play it back to see how your accent compares to the French voice on the CD.

As educational software goes, *Learning French With Asterix* is very professionally produced, and would inject some much-needed interest into any French lesson.

**89%**

If you were hoping for a translation, tough luck. You'll have to buy the CD for that!

Anyone new to Asterix can get acquainted with him and his merry band in the introduction scene. Once you know who's who, you can ask Asterix and Obelix a few probing questions.

# ND-UP

## GLOBAL CHAOS

DMI Ltd., Price: £29.99,  
Tel: 0753 686000.

Remember *Top Banana*, that collaboration between dance music producers Cold Cut and programmers Hex? Well here it is again, this time backed up by a collection of nine additional soundtracks.

From the title screen you can choose to play any of the soundtracks, or just go straight into the *Top Banana* game. There's no difference in the CD and floppy disk versions of the game, so it remains a graphically sickening, simplistic platform affair with silly and often irritating sounds effects. If you can imagine playing *Rainbow Islands* with half the features missing, and a whole load of corrupt graphics, you've got the general idea.

Completely unconnected to the game are the soundtracks. I was expecting something special when I read the credits on the inlay and discovered they had been produced by Cold Cut, but I was in for a disappointment. Select the Global Chaos icon, and you get a choice of four tracks. They're all in much the same hardcore style, with random sequences of 'cyberdelic' graphics for a bit of visual stimulation. They're not bad, but nothing more than you'd expect from an average PD rave demo. Digital Love is another collection of four tunes. These are supposed to be ambient, but they're merely slow-moving chord sequences with very simple melodies. Don't expect any powerful hypnotic soundscapes. Finally there's Eternal Rave. This is a single track with some very messy loops, and loads of sounds that are often both out of time and out of tune with the rest of the track. Unfortunately, unlike the others, the stereo panning here is hard left and right, so listening through headphones is out of the question.

Despite some good ideas, *Global Chaos* fails to impress.

59%

Nice video, shame about the song. The powerful, if jumbled rave tunes are let down by the weak 'ambient' soundtracks. The less said about the game the better.

## THE ILLUSTRATED WORKS OF SHAKESPEARE

Animated Pixels, Price: £29.95,  
Tel: 0705 291866.

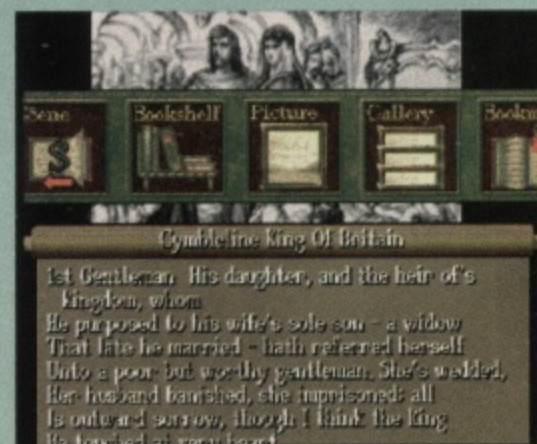

When the Amiga first arrived, the 'vast' 512K memory was almost too big for most game programmers, who took to filling the extra space with digitised graphics and sound that often had very little bearing on the games themselves. Now with the enormous storage capacity of CDs, designers and programmers are once again at a loss for how to make use of all that space.

The *Illustrated Works of Shakespeare* is another of those CDTV releases which seem to be more of an exercise in filling a CD than a serious attempt at a useful piece of software. The disc holds 42 poems, sonnets and plays as text files; just about everything Shakespeare ever wrote. These are all accompanied by digitised graphics, illustrating various scenes from the text.

It works pretty much as a straight book. You can move back and forth through the current piece, call up a relevant illustration, change the font, or search for a string of text. You can also move onto another play, poem or sonnet at any time. If you're reading Shakespeare as part of a literature course, it could make studying a bit more bearable. Other than that though, I can think of little practical use it could be put to. If you just want to read Shakespeare, you may well find a good old fashioned book cheaper, more portable, and easier on the eyes.

65%

Calling all Shakespeare fans! No don't all rush at once. Now you can enjoy his complete works on CD.

## VOICE MASTER

Microdeal, Price: £39.99, Tel: 0726 68020.

Well known for their sampling hardware and software, Microdeal have now released a sampler specifically for the CDTV. Although it comes with no software, the small microphone and cartridge can be used with other existing CDTV software, like karaoke discs and the *Learn French With Asterix* program. That's all there is to it really. If you've got any sampling software, you can use it just like you would any other sampler.

Are you ready to

# take on the tiles?

They're small, they're square and they're the toughest opponents you'll ever face.

Whether you're a wizard with words or you spell Xylophone with a Z, you'll love this magical piece of programming from US Gold. Scrabble for your screen.

After eons as the world's best loved word game, we've brought Scrabble smack bang into the 21st century.

It's the same irresistible blend of skill and chance, but with hot graphics and some very special features thrown in.

- \* Challenge up to 3 friends or take on the might of the computer solo.
- \* 12 skill levels to test seasoned pro's or first timers alike.
- \* Contains every single page of the Chambers Official Scrabble Dictionary - over 126,000 words!

So if you slap down 'dude', 'hotshot' or 'megahit' and your pals give you some verbal, just check out the words to see if they count.

And at the end of a battle simply click the mouse and print out the final layout of the board to goad your opponents with.

Pick up Computer Scrabble today. And spend a night on the tiles.

# ART GALLERY

As you can see on these pages, Art Gallery stretches from the sunlit shores of landscape drawing to the dreadful depths of dark imaginings – wherever artistic ideas and ability reach, in fact. For the hottest tips on creating a masterpiece... read on.

1. The picture begins with a 10 to 15 minute sketch using the freehand tool. Tim had, however, spent more than an hour previously trying to construct the head with circles and ellipses.

2. Tim tried a different colour background and cut out the shoulders. The face and beard were given rough details. Sketching was used on the neck and then smeared. Tim employed the flood fill on the collar before airbrushing and smearing the edge. This took about an hour and a half.

3. By this stage the black background and shoulders had been restored. Rough shading to the cheek was added with the airbrush, and greater detail added in freehand. Tim adjusted the palette to obtain suitable flesh tones and painted repeatedly with different tones until he achieved a look he was satisfied with. All the blending of flesh tones was done with the smear control. When this part of the drawing was complete, Tim turned the whole thing into a brush and placed it further up the screen. Between three and a half and four hours work has gone into the picture since the last stage.

4. Further detailing and smearing of the flesh tones. The hair was drawn roughly – Tim says all attempts at adding detail made it look like a wig! Another hour was spent reaching this point.

5. The background was enlivened with the airbrush and saved. The last stage was reloaded, Tim altered the palette once more, and the skin tones and hairline were softened. The hair itself was also made more realistic in appearance. The whole picture was saved as a brush and superimposed on the enhanced background. Unwanted overlaps were then painted out, so, with an hour and 45 minutes more work, the drawing was completed, leaving the suave, but scheming, time traveller staring jealously into space. What is particularly impressive about Tim's work is that he had owned his Amiga for just three weeks when this drawing was produced. If you know the palette settings for good skin tones, by the way, he'd like to hear them.

If you have a picture you would like to see featured in CU's Art Gallery, send us an IFF disk with the drawing at several stages of construction, as well as the finished masterpiece. Include a description of what you have done to achieve the effects seen in each shot. Send your disk to: CU Gallery, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU.

1. Scott used *DPaint III* in low res. with 64 colours. Make sure, as in this case, the spread of colours you choose is appropriate for the subject matter.

2. Once the background is established, highlight some of the better-formed shapes and discard the unwanted ones. The framework can then be filled in, as with the addition of the head's right eye and surrounding flesh.

3. Scott suggests you save time and effort by using the brush selector to copy difficult objects, such as eyes. As you can see, a spare eyeball is sitting at the bottom of the picture, looking authentically round and reflective.

Don't sit waiting for inspiration to strike, says Scott Shore of Dudley, West Midlands, reach to the stickiest part of your imagination, grab something, and drag it back.

5. The final version, looking highly professional, with signature added for good measure. Scott tells us he's available for work at the moment – any offers?

4. Depth is added to the picture by contrasting the dark colours of the right side with the brighter, sharper, colours to the left.

1. Working with *DPaint IV* in HAM mode, which allows over 4,000 colours on screen, John made extensive use of gradient fills to produce the sky, lake and mountains in the early stages of his drawing.

2. Creating the required spreads and ranges for the gradient fills was rather laborious, John found, but worth the effort. Controlling the colours at the edge of contrasting areas poses some problems, but these can usually be overcome. Note the impressive way the reflection of hills and trees is conveyed, and the hint of clouds, also mirrored in the water.

3. When painting freehand on a computer, as John does, frequent saving of the picture is recommended. That way you can always return to your last step if you make an error, rather than go right back to square one, or put a lot of effort into covering up the mistake. The descent of the fence into the lake, and the rippled shadow cast on the water, add a realistic and atmospheric detail to the scene.

This fine picture was drawn by John Buckley of Southport, Merseyside. John based the drawing on an oil painting by himself.

5. Voilà. The tranquil setting is complete, with the tree looking less stark now it has gained a few leaves.

4. The drawing is almost finished. Only a few final touches remain to be added.

If you want the POWER, then  
look no further...

Harwoods have put together some great top of  
the range Amigas that will fit the bill for even  
the most demanding Amiga user.

We've taken the powerful A1500 and tuned it into something  
extra special with a massive 120Mb. Hard Drive and 3Mb.  
of RAM, but if that's not powerful enough just look at the  
specification of our Amiga A3000 pack... and note the price.

WE'VE GOT THE POWER!

**GOLD SERVICE**

**COMPARE OUR GOLD SERVICE**

Before you choose from whom to purchase, please phone us. We are always happy to discuss your requirements and answer any queries you may have. And... remember Harwoods have always provided THE BEST service in the industry...

**FREE GOLD SERVICE:** Any computer, monitor or printer - unless covered by In-Home Warranties - that requires service in the first year is collected FREE OF CHARGE (UK Mainland only). Remember at Harwoods we charge no more for this GOLD service. The fastest turnaround possible is GUARANTEED by our OWN SERVICE ENGINEERS. **TECHNICAL SUPPORT:** You will be given our Exclusive Technical Support Phone Number to call should you require any help or advice on any aspect of the system you have purchased. **MINIMUM 12 MONTH HARDWARE WARRANTY:** Items proving faulty within 30 days of purchase are replaced with NEW UNITS unless otherwise stated. For the guarantee period, warranty service will be completely FREE OF CHARGE (some items are 2 yr warranty). **YOUR SYSTEM READY TO GO:** All main hardware products come with mains plugs and leads - just connect up and use straight away...

#### How to contact us...

**BY PHONE:** Phone our Order Hotline with your Access, Visa, Mastercard Switch or Lombard Creditcharge Card quoting number & expiry date (Most Dixons, Currys, NASCR and other 'store' cards are Lombard Creditcharge and are happily accepted by us).

**BY POST:** Make cheques, bankers building society drafts or postal orders payable to GORDON HARWOOD COMPUTERS. (Personal/business cheques take 7 days to clear from day of receipt whereupon your order will be despatched). Please send Name, Address, and most importantly if possible, a Daytime Telephone Number along with your order requirements. Please check you are ordering from our latest advertisement before posting (phone if you require confirmation). Please remember that for example many September publications appear during August, etc., therefore prices you see may have changed (either up or down!).

**EXPORT:** Most items are available at TAX FREE PRICES to non UK residents and service personnel. Please contact us for confirmation of export prices before ordering.

**FREE DELIVERY:** within 14 working days, UK Mainland only. OR: **SPEEDY COURIER SERVICE.** Add just £6.95 per major item for guaranteed next working day delivery (or £7.50 for Saturday delivery), UK Mainland most regions. (Despatch normally on day of order or payment clearance).

All listed prices are what YOU PAY, and there are NO HIDDEN EXTRAS. VAT and postage are included, and prices are correct at time of going to press (Pack details may vary from time to time). Offers and Services are subject to availability and to bring the latest advertised products, packs and prices. Please note goods are not supplied on a trial basis. E&OE.

#### VISIT OUR SPACIOUS SHOWROOM:

Why not take a trip out to visit us and see our full advertised range, and more, available at the SAME COMPETITIVE PRICES. (Please see opening times) There's plenty of FREE parking nearby too!

# PD SCENE

**Tony Horgan dips a mug into the punchbowl that is the Public Domain, and sorts out the lemon peel from the tequila. Or something like that.**

## SOMETHING FISHY slideshow

Have you ever hitched a lift on the back of a whale, or fed oven-ready chicken to a rampant shark? No, I didn't think so. Never mind, because you can get a taste of what it would be like with the Celtic Warrior's Something Fishy slideshow.

If you like your fish big and nasty, you'll love this. The two disks contain some superb shots of the biggest, ugliest fish you've ever seen, and quite a few you haven't. Although the digitising isn't brilliant, the pictures themselves are pretty stunning, with divers swimming alongside enormous whales, sharks bearing their razor-sharp gnashers, and all manner of other gruesome fishy creatures. Most of them are wild, but a few pictures at the end are of whales and dolphins in theme parks. Definitely one of the better slideshows of late.

Available from: 17 Bit Software, 1st Floor Offices, 2/8 Market Street, Wakefield, WF1 1DH. Tel: 0924 366982. Disk no. 2132 a+b. Price £3.00 (including P+P).

85%

## OLD BULLS demo

Ooh, the anticipation! There's nothing a demo coding team likes more than a massive drawn-out intro, which promises the Earth but demands you sit through 10 minutes of slow-scrolling hellos and details on why their bob vector sinus routine is better than anyone else's. It's an understandable attitude, as a lot of time goes into the creation of a decent demo, but the coders should realise they're doing themselves no favours boring us all to death with their tales of shandy drinking at the last copy party.

The Old Bulls demo spares us the shandy yarns, but is guilty on all the other counts. It begins with a very cleanly digitised piece of fantasy artwork, featuring a raging bull; hence the title I suppose. A brief tour around a 3D vector world, very much in the style of the Trip To Mars demo, is followed by another digitised pic - this time it's of a load of crushed drink cans. This is followed by some unremarkable vector routines, and then... the climax? No, that's it. Just when you thought something wonderful was going to make it all worthwhile, up come the credits. What a let down.

Available from: NBS, 1 Chain Lane, Newport, I.O.W. PO33 2QQ. Disk No. D792. Price: £2.00 (including P+P).

41%

What digitised pics of a fantasy bull and soft drink cans have got to do with each other is really beyond me. Still, they look very pretty.

## FILLING THE MACHINE demo

Demos aren't often known for their side-splitting sense of humour. Your average joke in a scroll-text is about as funny as, well, something not very funny. Anyway, this one from Vark is the best comedy demo I've seen for a long while.

It's a slideshow comic strip, a parody of that irritating Nat West Bank advert. You know the one: zit-covered school-leaver starts a job at the bank, and goes on about the cashpoint machine being 'just like a photocopier really, except the paper's more expensive!'. Yeah, and except it doesn't do photocopies. And we're supposed to trust these people with our money?

The line: 'I always put plenty in, 'cos I know I'll be on the other side come Saturday night!' is illustrated with a picture of said spotty school-leaver taking a baseball bat to the cashpoint, while his mate throws up his take-away. Definitely worth a brief look.

Available from: Virus Free PD, 31 Faringdon Road, Swindon, Wiltshire. Tel: 0793 512321. Disk no. 2878. Price £3.00 (including P+P).

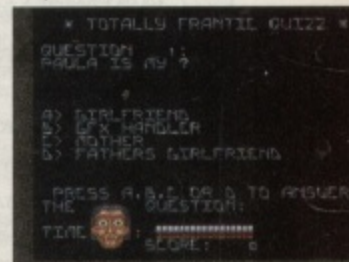

90%

## TOTALLY FRANTIC QUIZ game

This is one sad demo. The format is a cross between a mega-demo and a pub quiz machine, except that instead of asking you questions like 'In which year was the FA Cup first contested?', it poses: 'What happens if you put \$4FB2 in address \$240000?'. And bob sinus-scroll routines. Note to programmer: get a life.

Available from: Diskovery PD, 108 The Avenue, Clayton, Bradford, W Yorks, BD14 6SJ. Tel: 0274 880066. Disk no. G154. Price £1.85 (including P+P).

## BRAIN SNATCHERS

### demo

Brain Snatchers is one of those demos that seems to be all intro and no demo. Via a sequence of animations and various other effects it attempts to tell the story of a man born with an unusually large brain. A deranged brain collector takes an interest in his grey matter, and plots to add it to his cranarium. The strange thing is, just when it's getting somewhere, it ends. The only section of any note is the rock track, which is synchronised with an animated band.

Available from: **Diskover PD**, 108 The Avenue, Clayton, Bradford, W Yorks. Tel: 0274 880066. Disk no. D360. Price £1.85 (including P+P).

68%

## ALL GUNS BLAZING

### game

There are some people who run a mile from anything written in AMOS. Although some fun games can be written with it, most are too ambitious, and end up looking rather pathetic alongside their commercial counterparts. Unfortunately, All Guns Blazing is another of those over-ambitious attempts at an arcade game.

In the style of *Nitro* and *Supercars II*, it's a race game for two-players. The tracks scroll rather jerkily through a couple of tiny windows. Because there's no sense of speed or momentum, it never really feels like you're driving a car, and the dodgy collision detection only heightens the frustration. Far from the best example of an AMOS game.

Available from: **NBS**, 1 Chain Lane, Newport, Isle of Wight, PO30 5QA. Tel: 0983 529 594. Disk no. CLG001. Licenceware, price £3.50.

40%

## WORLD OF TECHNO

### music demo

It's techno time again. The seven tracks are more original than most of the stuff that's doing the rounds at the moment, but they fall somewhere between 'real' techno and 'demo' techno, if you know what I mean. There's nothing in the way of whirling bobs or plasma, but instead you get a mock computer-console, with monitors displaying info on the tracks, and there's also a couple of oscilloscopes.

The tunes themselves take a while to get going, and they're a bit short on hooks. Even so, they're all neatly sampled and well sequenced.

Available from: **Diskover PD**, 108 The Avenue, Clayton, Bradford, W Yorks, BD14 6SJ. Tel: 0274 880066. Disk no. M243. Price £1.85 (including P+P).

70%

## NEIGHBOURS

### adventure game

If you've ever wanted to take a stroll 'round Ramsey Street, here's your chance. Nasty old Paul Robinson has decided to sell off the street, which has got the residents rather peeved. Your job is to put a stop to his fiendish plans.

I was dreading a text-only game, but was pleasantly surprised to find that it's more like one of those CD-ROM Multimedia things. Each location has a full-screen digitised picture of the scene. All the adventuring is carried out via a strip of icons, used for examining, taking objects, talking to people and so on. I couldn't track down Lucy though – shame.

As adventures go, it's pretty simple, but quite a laugh all the same. I can't wait for the follow-ups: Prisoner, Young Doctors, Home and Away...

Available from: **17 Bit Software**, 1st Floor Offices, 2/8 Market Street, Wakefield, WF1 1DH. Tel: 0924 366982. Disk no. 2250 a+b. Price £3.00 (including P+P).

78%

## EBENEZER GOODE

### REMIX

#### music demo

I had high hopes for this mix from Four Small Custards, after hearing good reports of their previous releases. All seems to be going well, as the track kicks in with some chugging beats and a nice bassline. A few drum fills later, you're primed for the arrival of the 'Es are good' riff. Suddenly, tragedy strikes, as the aforementioned riff comes squeaking out of the speaker like a strangled duck.

As if that wasn't bad enough, you're then assaulted by what I imagine is the Custards singing the chorus themselves! Despite some good supporting samples, the track never recovers. Approach it as a comedy demo, and you'll have a barrel of laughs.

(Plus only). Available from: **17 Bit Software**, 1st Floor Offices, 2/8 Market Street, Wakefield, WF1 1DH. Tel: 0924 366982. Disk no. 2239. Price £1.75 (including P+P).

## ULTIMATE DANCE

### music demo

This makes a nice change: a decent music demo that isn't a raver. It opens with a promising house track with a good long vocal sample, backed by some nice piano and bass rhythms. It gets a bit repetitive eventually, but a bit of patience takes you through to the subsequent tracks, which follow on in a similar style. The highlight is a decent remix of Moby's Go, complete with chords nicked from Twin Peaks.

Overall sample quality is very good, and it all gets quite catchy after a while. It veers into the realm of traditional demo music occasionally, but it survives nonetheless.

Available from: **17 Bit Software**, 1st Floor Offices, 2/8 Market Street, Wakefield, WF1 1DH. Tel: 0924 366982. Disk no. 2253. Price £1.75

# PUBLIC DOMAIN UTILITIES

## TOTAL CONCEPTS: GEOLOGY ENTERTAINMENT/EDUCATION

Although the subject of Geology may hold no great fascination for you, Total Concepts: Geology presents the subject in such an accessible and contemporary format that it's hard not to become interested.

As with previous Total Concepts (TC) titles the program offers you two types of information: pictorial and textual. When you load it you'll be presented with two menus and a picture button. At the right of the screen, the Index menu provides information about the various elements of the program (menus, pictures, printer drivers, etc.). Simply click on a title, and appropriate text will appear explaining how to use the program.

Below this menu, the picture button provides a list of the 43 pictures which accompany the program. These include annotated maps and earth movement diagrams, as well as copious numbers of digitised pictures. On this point, I must say that the programmer seems to be getting to grips with his digitiser because the general quality is very good.

The pictures can be viewed by clicking on the desired title, but they're far more relevant if viewed while perusing the main text.

So, on to the heart of the program – the text files. The text-index occupies the entire left-hand half of the screen and contains 63 subject headings split between nine 'chapters'. These chapters cover the solar origins of the Earth, plate tectonics, minerals, volcanos, surface processes (erosion, sedimentation, etc.) and igneous, pyroclastic, sedimentary and metamorphic rocks.

As an entertainment or reference work, you can dive into the 'book' at any chapter, but if you prefer a more methodical (and educational) approach, you may prefer to start at the beginning and work your way through it. It is as a reference work that this disk really shines.

Periodically, the text is punctuated by picture buttons, and clicking one of these will display a picture appropriate to the current text.

Key words in the text are highlighted in yellow or white, and this can be useful when one is scanning it for a particular reference, perhaps as part of a revision study.

The text is both authoritative and highly readable, with none of the stodginess found in more formal text books. In fact, the content is so complete that this program could easily form part of a GCSE study course, and it would be a real shame if teachers didn't take account of this possibility.

We've had the *Fun School* series aimed at younger children, now at last teenagers have access to educational programs that are every bit as stimulating and worthwhile. Parents take note!

Disk No. CLE02. Licenceware from: Blitterchips, PO Box 64, Keighley, BD21 4NB. Tel: 0535 667469. Price: £4.50 inc. P&P (two disks). Compatibility: All Amigas. Memory: 512k.

## Mat Broomfield takes a close look at the very best PD and Shareware utilities to be released this month.

### AMIGA PRO CLIP ART BANNERS - CLIP ART

Clip art is always popular among arty and DTP types, and because it's so easy to create there is a proliferation of it on the Amiga. However, most of it is incredibly poor quality.

Fortunately this is one disk of clip art that doesn't fall into that category. You probably won't have seen much stuff like this, because the quality and subject matter are really outstanding.

It's been lovingly created by Essex Computer Systems, who

specialise in this type of monochrome woodcut-style clip art. This disk contains 14 images that are perfect for use as signs and banners. Each hires bit-mapped picture has at least one area of white space into which you can add your own message, and there's a good variety of Victorian style images to choose from.

The pictures are generally many times larger than the screen. This means that the printed image will not suffer from the jaggies (rough edges or pixel 'steps' caused by enlargement) to anything like the degree found with usual standard sized images.

As if that wasn't enough, the compilers have thought to include a nifty slide show that lets you view each clip, using the mouse to scroll around the entire picture.

This is one disk chock full of truly impressive clip art!

Disk No. Banners 1. From: Essex Computer Systems, 118 Middle Crockerford, Basildon, Essex, SS16 4JA. Price: £1.50. Compatibility: All Amigas. Memory: 512k.

88%

## SCRAM 500 DIY 8 MEG RAM UPGRADE AND SCSI CONTROLLER

Hardware projects seem to be becoming increasingly popular these days, but this is the first time I've ever come across such a high-tech or cost saving project.

The disk contains comprehensive assembly instructions, HPGL compatible plotter files of the circuit boards, IFF screens of the board in various states of assembly and various supplementary text files.

The actual project results in an external 8Mb RAM board with eight-bit SCSI interface for either the A500 or 1000 computers. By purchasing the components directly from the project's author it's possible to construct the entire thing (complete with 8Mbs of RAM) for about £150. You'd have trouble buying the RAM chips for that little in England.

Although the board design is quite complex, the instructions are concise, and with care any hobbyist-level electronics buff should have no trouble putting it together. But then that's the beauty of making such a project Shareware, you can buy the instructions for next to nothing to see if you think that you could follow them. If you're not intimidated, then you can go ahead and buy the components.

The only slight fly in the ointment is the fact that the parts have to be ordered from Australia, which may make you feel uneasy. However, you can order by credit card if you prefer.

Incidentally, with the author's prior consent, you can actually manufacture these devices and sell them commercially if you so desire, so any budding businessmen out there take note.

The designer tells us that his next release will be a complimentary 68030 accelerator, which will be very interesting indeed.

If you want to save money, or you like to DIY, check this disk out.

Disk ID: Fred Fish 698. Available from: Seventeen Bit Software, 1st Floor Offices, 2/8 Market Street, Wakefield, West Yorkshire, WF1 1DH. Tel: 0924 366982. Price: £1.60 inc. P&P. Compatibility: A500 and 1000 only. Memory: 512k.

## EDUCATION

**V13 PLAY & READ CHALLENGE** Education progs for the under 7's  
**V346 KIDS PAINT** A painting program designed for children. Includes various colours & speech.  
**V584 FACTS** Everything you need to know about the solar system.  
**WORLDWIDE** Produces different maps.  
**V737 EDUCATION** This is a set of educational games for the under 7's.  
**V776 AMOS LESSON 1** The best Amiga tutorial program. (APD151)  
**V792 KIDS GAMES** Includes Geography, Math, Science and Word Games. Also contains Wheel of Fortune.  
**V793 AMIGA BEGINNER** You ask for it & it's a tutorial for the beginner on using Amiga! Covers CU & Workbench. Is great for learning about the Amiga.  
**V824 ELEMENT 3.0** A very nice interactive display of the Periodic Table of Elements. Education Product by the CIA this program plots world maps in cylindrical or spherical projections with various degrees of magnification.  
**V702 SNAKES & LADDERS** The classic board game now on the Amiga

**V8 WORK & PLAY: CLICK CLICK** Learning the time. LET GO SHOPPING simple Division / Multiplication. **NUMBERS TABLES** Teach times tables. £4.99  
**V810 WORLD FACTORY** A program to help kids learn to spell. £4.99  
**V829 BIG TOP FUN** Contains programs to help children with words & pictures. £4.99  
**V837 ROCKET MATHS** Times tables. Take away. Add up & Divide. £4.99  
**V845 MUSIC BOOK** Excellent to introduce music. ages 7+. £4.99  
**V859 PREHISTORIC FUN** Who likes Dinosaurs four excellent ports £4.99  
**V862 COLOURING BOOK II** The sequel with better pictures to colour. £4.99

## VIDEO PRODUCTION

**V48 TV & VIDEO GRAPHICS** (8) Packed with background screens for your video productions. Different types of graphic styles. Pool, tanks, an FF Pic & peels it down the screen.  
**V86 VIDEO PRODUCTION 1-2** Packed with video & Genlock utilities.  
**V415 VIDEO SCREENS - 1** Back ground pictures for video production  
**V517 VIDEO & AMIN - VIDEO D8** A program for keeping track on your video where it's at. **HELP** Let's you play with video on small main machine.  
**V518 AMIGA LAB** This program is like a mini AT. DPT. Tools On Top Does fades, colourbars & gray bar.  
**V519 VIDEO: STILLSTOPS** Used to create over the shoulder graphic inserts like the V10 clock news.  
**V634 VIDEO: SHADES & FADES** ANIMATED. A utility to fade screens & out. **SUPERVIEW** Will display IFF pictures. **TURBULENCE** Create subtitles.  
**V677 ANDROID VIDEO BACK** GROUNDS Selection of B/G Pictures  
**V687 VIDEO WIPES** A collection of IFF brushes & background graphic effects.  
**V693 HARLEQUIN VIDEO ART & FONT DISKS** A video production with excellent backgrounds & fonts (3)  
**V818 INSCRIPT V1.1** Produce video titles. Features include fully editable text entry. IFF packs as background. Unlimited number of lines loaded, outline support (W2.04), led styles & cycling, all resolutions.  
**V829 VIDEO PRODUCTION 3-4** This is the latest collection of the New video related utilities. Excellent (2)  
**V827 VIDEO: REAL 3D TEXTURES** Contains various excellent textures like black marble, brick work, Rough Ice, Marble Tiles, Water ripples & Wood. £3.50  
**V875 VIDEO LAB V1.0** Simple to use video titling package. Genlock is not required. Ask Two Dimes £4.99  
**V899 FLETCHER FONTS** A three disk pack of 50 - 100 point 16 colour video fonts. Includes templates £9  
**V910 FLETCHER FONTS** A three disk pack of 50 - 100 point 16 colour video fonts. Includes templates £9

## VARIOUS UTILITIES

**V16 FISH TANK SIM** A program that simulates an aquarium.  
**V28 WORD WRITING & AMIGA SPELL** Contains over 9,000 words.  
**V109 PRINT STUDIO** Excellent for printing pictures & text.  
**V191 MASTER VIRUS KILLER** Virus Checker & Killer. With excellent options. Includes search disk.  
**V194 M.R.BACKUP HD** Hard disk backup program.  
**V215 DISKMASTER V3.2** Copies files from one disk to another. **DISK SALV** Corrects & repairs bad tracks.  
**V262 DUPLICATION & BACKUP** Super Duper, Turbo copy, Sanity copy & PCopy. Four new disk copiers.  
**V277 FORTRAN-77 V1.3c** Compiler, linker & run time support libs.  
**V279 CROSSWORD CREATOR** Creates crosswords. UPDATED VERSION.  
**V284 MCAD PROGRAM** The latest Drawing Program. ie C.A.D.  
**V298 NORTH CV1.3** (2) C language / Amiga. Includes all files required.  
**V301 EYE OF THE BEHOLDER** PRINT BOOK Inc Introduction, Book Reviews, Maps, Strategy & Solution.  
**V323 ANALYTICAL SPREAD SHEET** (2) The best spread sheet.  
**V330 RED SECTOR EXTRAS** DISKS (2) Loads of extra bits for the  
**V332 AMIGA PUNT PROGRAM** Predict which horse will win with this horse prediction program.  
**V339 SPECTRUM EMULATOR** DATA DISK 1. Adventure Classics.  
**V350 BUSINESS CARD MAKER** Design your own Business cards.  
**V365 RED SECTOR MODULES** Use with Pro Tracker / RSI Demo Maker

**V366 600 BUSINESS LETTERS** Over 600 Standard Business letters  
**V390 DESK TOP PUBLISHING** Includes various extra features over the old Word processor, Text Editor & Graphics editor & many others.  
**V392 AMICASH BANKIN** The best bank program that I have ever used on the Amiga. Very easy controls.  
**V394 CHEMESTICS V2.06** Program that draws molecules using the colour model. Excellent effects.  
**V401 WINDOWBENCH V1.0 (2)** An excellent Workbench 2 replacement / Upgrade for all WB v1.0 users.  
**V413 WORKSTATION V1.0** Another WB clone. It's a collection of utilities with the Workbench theme. (2)  
**V417 SUPERBENCH & EXTRAS** (2) An excellent replacement disk with more utilities than the original.  
**V420 CURSOR BASIC COMPILER** Compile any Amiga Basic program.  
**V423 C. COMMANDS** This disk is filled with utilities which can be used in your Startup-sequences.  
**V424 ANTI-FLICKER** Said to stop the flicker in High Res mode during some Amiga program operations.  
**V431 IMPLODER V4.0** Reduces file size for storage on hard drives over your own disk collections.  
**V433 ANIMATION STUDIO** An excellent Animation creator for you to make your own little animations.  
**V444 PRINTER DRIVER DISK III** Now contains instructions on how to install them. Includes over 90  
**V445 JRCOMM V1.02** This is the latest version of the modem program.  
**V479 CHESS & CHESS UTILITIES** A collection of chess related puzzles.  
**V484 ADVENTURE SOLUTIONS** (2) Solutions for various games.  
**V489 AMIBASE PROFESSIONAL V2.0** Latest version of the excellent Database program. NEW FEATURES  
**V490 MESSY V2.0** Will read MS-DOS disks. Transfer any text files to & from the PC. So you can work on an IBM or on an Amiga & swap text.  
**V493 DESKBENCH (3)** This is an excellent Workbench replacement.  
**V498 THEE SOUND RIPPER V3.0** Finds all most all tracker modules.  
**V499 STAR CHART V1.2** This is an excellent star plotting program with some interesting features.  
**V515 A64 PACKAGE V2.0 DEMO** (2) PD version of the 64 Emulator. Actually runs faster than 64. Runs 64 basic.  
**V516 THE COMPLETE A64 PACKAGE V2.0** With interface & Full Commercial software. Transfers disks from your original 64 disk drive. Runs in stock for £44.99. This is a full registered version of the software program.  
**V521 PLOTTER & GRAPHICS** PLOTTER. A powerful full featured plotting prog. **PLANS & COMPUTER** aided drafting prog. Requires ARP.  
**V522 ARP V1.3** Common v1.3c. Makes many improvements to Dos. Includes full developers guide.  
**V523 DICCS C COMPILER (2)** Matthew Dillies full featured powerful C compiler & environment system.  
**V536 CATALOGUE UTILITIES** A collection of utilities used to Catalog disk / Video & Tape collections (2)  
**V54 R.S.I. MUSIC MODULES (2)** Another selection of music from RSI.  
**V556 RED SECTOR HELP DISK** Helps you use the RSI Demo Creator.  
**V560 DUPLICATION & BACKUP** A collection of copiers like Amiga Copy, Coder copy, PCopy, Roffcopy, etc.  
**V567 PRINTER DRIVER GENERATOR** A selection of utilities with various excellent Printer Driver Generators.  
**V569 DUNGEON MASTER MAPPER** A little tool that creates maps of dungeons, lands which can be used by a D8 for use in AD&D.  
**V571 WHOM V2.02 (2)** The Dr Who database program. Gives all info on Dr Who program. Gives all info on Dr Who program.  
**V575 FILE & HD MANAGEMENT (2)** : HDCLUCK V2.0. A program selector to make Hard disk Menus. Starts with gadgets. **FILE MINDER**. Utility for maintaining files & Directories.  
**DOSCONTROL**. Tool that combines the functionality of many separate tools.  
**V575 HOME BUSINESS PACK** Excellent selection of utilities based on word processing, Data Management, Spread Sheets, Accounts & Printing (6)  
**V583 ICONEDITOR III V2.0**. Can create icons upto 640x200 pixels. Icons, Edit & Create any Amiga icon.  
**V587 GELIGNITE FONTS (2)** A selection of fonts for use with any DTP Package or Paint disk.  
**V604 PD COPY V3.0** New disk copy with some extra commands & quick copy modes built in. (IMB)  
**V605 PRO CALC V1.0** Offers the C or Machine code programmer a 68000 or FPP calculator when in use. (IMB)  
**V606 SAMPLE MAKER V1.0** This works specially for those who are not able to make samples with a sampler.  
**V607 PRO TRACKER V2.2** Written by Lars Zap Hamre. Another update to the Ultimate sound making program.  
**V610 GOLF SCORES V1.84** It will record each round you play. Store it, make up an eclectic score NEW!  
**V611 FOOTBALL LEAGUE EDITOR V1.0** Want to update your teams league position as the results come in.  
**V620 ASPICE V3.2** Circuit Analysis. A full featured program for electric circuit.  
**V621 EDWARD V2.2** is a fully featured & operational Word processor which offers all standard features & More like Powerful ones.  
**V624 NIB COPIER V2.0** Will copy in AmigaDOS, Index Noble modes, search mode & special parameter copy.  
**V625 NCOMMA V2.0** Contains, IARC V2.0, IARC V1.0, IARC V1.1, IARC V1.2, IARC V1.3, IARC V1.4, IARC V1.5, IARC V1.6, IARC V1.7, IARC V1.8, IARC V1.9, IARC V2.0, IARC V2.1, IARC V2.2, IARC V2.3, IARC V2.4, IARC V2.5, IARC V2.6, IARC V2.7, IARC V2.8, IARC V2.9, IARC V3.0, IARC V3.1, IARC V3.2, IARC V3.3, IARC V3.4, IARC V3.5, IARC V3.6, IARC V3.7, IARC V3.8, IARC V3.9, IARC V4.0, IARC V4.1, IARC # THE No1 MONITOR FOR THE AMIGA

AND ATARI ST

**OFFICIAL  
UK PRODUCT**  
FULL SPECIFICATION AND  
1 YEAR ON-SITE WARRANTY

**PHILIPS 8833 Mk II**  
**14" COLOUR MONITOR**

**CAN YOU HANDLE IT?**

## THE GAME

Lotus Turbo Challenge 2 from Gremlin Graphics takes racing games to new dimensions. Pass through hazardous tunnels; twist along log-strewn tracks; speed over sand drifts. It's an action packed test of your skill and speed - CAN YOU HANDLE IT?

**FINAL CHALLENGE EXCHANGE**  
If you already own a copy of Lotus Turbo Challenge 2, don't worry. You can return the Free copy from your new monitor and, for just £5, Philips will exchange it for "Lotus - The Final Challenge". You can use this new software to design and create your very own racing circuits.

## THE COMPETITION

**WIN A DAY FOR 2 AT THE  
1993 BRITISH GRAND PRIX**

Imagine grandstand seats at the most acclaimed event in the Formula One year - The British Grand Prix. Philips will fly you and a friend into Silverstone and there's the chance to meet a famous Formula One personality at a celebrity reception. It's then time to take your grandstand seats for the morning's practice. A delicious 4 course lunch follows; then it's back to your seats for the Grand Prix itself.

It's all part of an exciting first prize package in the Turbo Challenge Competition. And, if you don't get the chequered flag, there are 40 runner-up prizes of Ferrari Testarossa remote control cars.

**WITH FREE! LOTUS TURBO  
CHALLENGE 2**

**PLUS!**  
A DAY AT THE 1993  
GRAND PRIX AND  
40 REMOTE CONTROL  
FERRARI TESTAROSSA  
CARS TO BE WON!

**£199**  
INC VAT Ref: MON 8855

## THE MONITOR

- 14" CGA COLOUR MONITOR

- TTL-DIGITAL & RGB-ANALOG COMPUTER INPUT SIGNAL
- CVBS VIDEO INPUT SIGNAL
- DARK GLASS SCREEN
- GREEN SWITCH TO SIMULATE MONO DISPLAY
- AMIGA, ST, PC COMPATIBLE
- CABLE REQUIRED  
See Accessories below

## USING A TV?

**Switch to a monitor and  
SEE WHAT YOU'RE MISSING!**

**If you are currently using your Amiga or ST  
with a domestic television set,  
then you are missing out on picture quality.**

Unfortunately, because your TV is used to receiving inferior UHF transmissions from the airwaves, it only has a UHF socket. So, your computer has to downgrade its high quality digital RGB (Red, Green, Blue) signal to UHF to enable your TV to receive it. However, because your TV can only display using RGB, it has to convert the UHF signal back to RGB before it can put a picture on the screen. Of course, every time you convert from one signal to another, there is a loss of quality which means that the final picture on the TV is not as good as the original signal from your computer.

You can overcome this with a monitor, which has an RGB socket, not UHF. Your computer will recognise this, and send its original RGB signal to the monitor which will display the image directly to the screen with no loss of quality.

The Philips 8833 is the best selling colour monitor for the Commodore Amiga and Atari ST. Ideal for game playing, it offers excellent colour graphics and has stereo audio speakers for enhanced stereo output from the Amiga and ST-E. The performance and reliability of the 8833 is exceptional, which is why we are confident to offer 12 months ON-SITE warranty with every Philips 8833 monitor. Plus, every 8833 from Silica comes with FREE Lotus Turbo Challenge 2 software, all for only £199 inc VAT.

## RECOMMENDED!

For maximum enjoyment of Lotus Turbo Challenge 2, we are pleased to recommend the best selling Zip Stik Super Pro Joystick. The Zip Stik is probably the best joystick currently available and the world's fastest rapid fire! At only £12.95, it represents superb value for money.

- Durable steel shafted handle
- 8 microswitches
- Handheld/table top
- 2 fire buttons
- Triple action auto-fire
- Single shot
- Short rapid burst
- Megablast continuous fire
- Rubber suction cups
- Extra long lead
- 1 yr g'tee

**ZIP STIK PRO**  
**£12.95**

- **PRICE MATCH:** We normally match competitors on a "Same product - Same price" basis.
- **ESTABLISHED 14 YEARS:** Proven track record in professional computer sales.
- **£12 MILLION TURNOVER (with 60 staff):** Solid, reliable and profitable.
- **BUSINESS + EDUCATION + GOVERNMENT:** Volume discounts available 081-309 0886.
- **SHOWROOMS:** Demonstration and training facilities at our London & Sidcup branches.
- **THE FULL STOCK RANGE:** All of your requirements from one supplier.
- **FREE CATALOGUES:** Will be mailed to you with offers + software and peripheral details.
- **PAYMENT:** Major credit cards, cash, cheque or monthly terms.

Before you decide when to buy your new monitor, we suggest you think very carefully about WHERE you buy it. Consider what it will be like a few months after you have made your purchase, when you may require additional peripherals and software, or help and advice with your new purchase. And, will the company you buy from contact you with details of new products? At Silica Systems, we ensure that you will have nothing to worry about. We have been established for almost 14 years and, with our unrivalled experience and expertise, we can now claim to meet our customers' requirements with an understanding which is second to none. But don't just take our word for it. Complete and return the coupon now for our latest FREE literature and begin to experience the "Silica Systems Service".

Last month we gave away *Videoscape 3D* on our coverdisk. We covered how to load and run one of the demo animations. This time we'll look at how you can create your own scenes and objects, and combine them in original animations.

# Videoscape

All animations begin with the ROT editor. It's here that you should first get acquainted with the theories of modelling 3D objects via three 2 dimensional views. Mess around with the robot head to get the hang of how objects are made up.

## GETTING STARTED

The first thing to be done, before you start animating, is to create some objects. This isn't done in the main *Videoscape 3D* program, but in the support module called ROT. This runs completely independently of the *Videoscape* program, and so long as you have enough memory available, you can run both simultaneously. To load ROT, double click on its icon in the *Videoscape* disk window.

When ROT first loads, there's nothing in any of the three object windows. Just to get some idea of how the whole thing works, select 'LOAD ROT OBJECT' from the menu. Load the file named 'ROBOTHED' from the objects disk. The three boxes will now be taken up by top, front and side elevations of the robohead. Drag the top slider marked 'POINT NO.', and you'll see the current active point move around the object. Do the same

with the lower slider, and you'll notice it cycles through the various polygons in the object. Once you've messed around with that for a while, you can have a go at creating a new object.

## STARTING FROM SCRATCH

ROT contains three views of the object. You can click in any view to start drawing. As you move the point in one view, you will see its movements reflected in the other two views. ROT allows for placement of up to 98 points in up to 98 polygons.

The program begins with point no. 1 at the origin (the centre of each view). Selecting the right arrow in the POINT slider produces more points, always positioned at the origin until you move them – they will remain invisible if you never do. You can choose a point to move by clicking the arrows or dragging the slider. For example, if no. 5 is the current point, you can drag the slider to the left to make no. 1 the current point. The current point is highlighted in all three views.

To see how the views fit together, imagine folding the TOP and FRONT views away from you until their edges touch. You end up with a half-cube that surrounds your object. When rotated, the object is moved around the centre of this cube.

To change the current point's co-ordinates, click in a view. Two of its co-ordinates will be changed so that it ends up at the cursor's location. Drag the point to its new position while holding down the Selection button. Which co-ordinates are changed depends on the view in which you click. For example, the FRONT view changes the X and Y co-ordinates. By clicking in at least two views you can position the point where you want it in all three dimensions. Sometimes two points will appear to be right on top of one another in a particular view.

Carefully check all three views to make sure the point selected is really the one you want to modify.

## MAKE YOUR POINT

Below the point slider are the current point's co-ordinates. You can change these by typing in the value you want. To do this, click on the far left character of the co-ordinate you want to change, and press DEL until the numbers have been erased. Type a new co-ordinate (you may have to backspace first to make room) and press RETURN. The preset range of possible co-ordinate values is 39.0 to -39.0.

You can change the co-ordinate range with the scaling factor. This is used primarily with *Videoscape 3D* objects to ensure that objects sharing a scene will have the correct relative size. To change the scaling factor, choose SET CO-ORDINATE SCALING FACTOR from the OBJECT menu, and a requester will appear. Erase the scale factor, enter a new one and press RETURN. The factors can range from 0.1 (10%) to 20.0. The new co-ordinate range is displayed by CO-ORD LIMITS. Select DO IT! and you will see the co-ordinates change to reflect the new scaling factor. The co-ordinates can only be whole number multiples of the scaling factor. For example, if your scaling factor is 10.0, and you change the X co-ordinate to 254.0, it will be rounded down to 250.0.

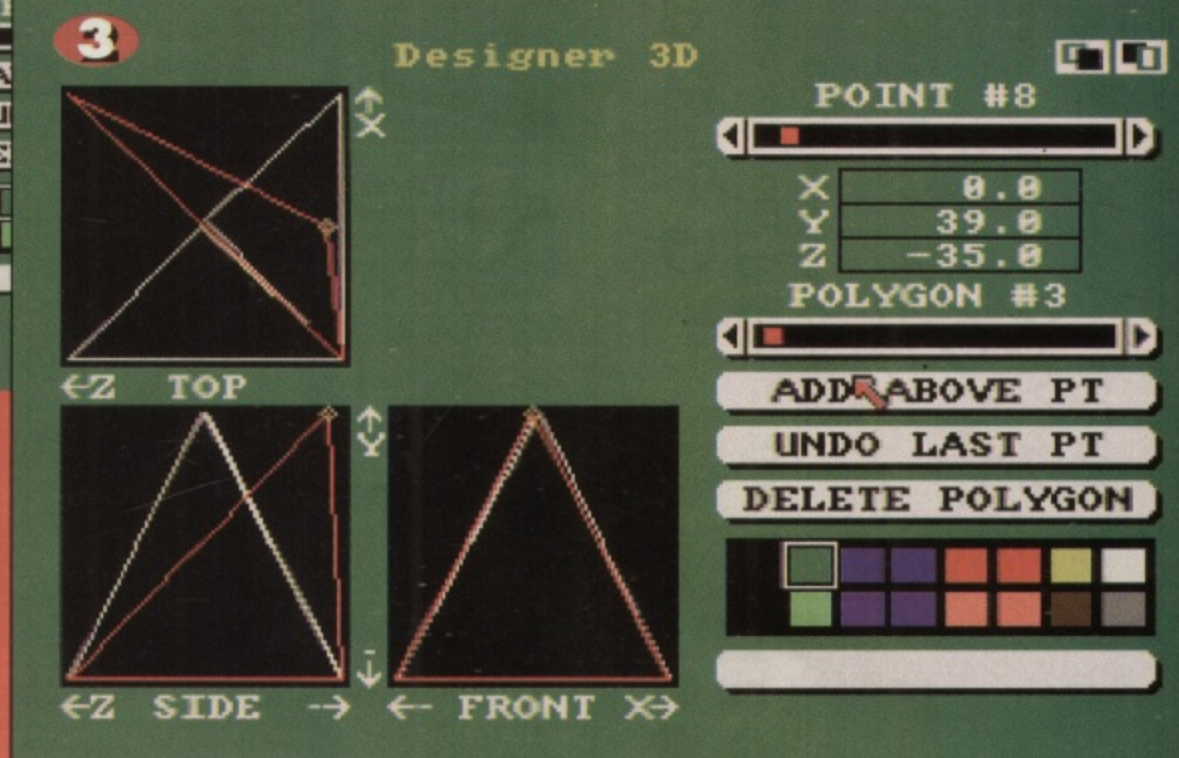

## CREATING POLYGONS

The POLYGON slider lets you choose the current polygon to be edited. Theoretically, the polygons already exist – you just need to add the points which determine the vertices. To do this, select the proper point with the POINT slider, then select the ADD ABOVE POINT button. A polygon must have

Next you can try making some of your own objects. Keep it simple for starters. It may look rather pathetic, but your first cube or pyramid will take a lot less sweat and tears to create than a model of Saint Paul's Cathedral. Get too ambitious before you're ready and you're likely to chuck it all in and never come back to it.

Your object will be made up of many points, and it's down to you to tell the software how to join them together. Only six consecutive points can be joined, but even these must be strung together in the right order if your creation is to take shape properly. After each point, move the point slider to the right, and click on 'add point'. The two will then be joined. Continue this until you've made a complete 'face'. Then move on to the next 'face' by shifting the polygon slider one step to the right.

# 3D

at least three vertices, but no more than six. The edges of the currently selected polygon are highlighted in red.

The order in which you select the vertices is important. Go in one direction around the outside of the polygon. If you see the red edges crossing, you'll know the points are out of order. Select UNDO LAST POINT to back up through the vertex list until the problem disappears. To get rid of all vertices, select the DELETE POLYGON button.

Down at the bottom of the screen is a colour palette. The highlighted colour will be used to fill the current polygon. To change it, click on the colour you want. There are two palettes, one for Videoscape 3D objects, and another for ROT objects. When you are creating an object for later use in Videoscape 3D, you must select colours from the Videoscape 3D palette. Look under the OBJECT menu and make sure the USE VIDEOSCAPE 3D PALETTE is ticked.

There are eight ROT-type palettes. Cycle through them by selecting the CHANGE SHADES button. This is only visible when the USE VIDEOSCAPE 3D PALETTE menu item is not ticked. The three views of your object have their X, Y and Z axes labelled. The arrows by each letter point in the positive direction along each axis. Click on an arrow to shift the whole object in that direction. Three of the arrows have minus signs next to them; they move the object in a negative direction.

## SAVING AND LOADING OBJECTS

Using the OBJECT menu, you can save your object in Videoscape 3D or ROT format. The ROT storage requester appears when you choose any of the LOAD or SAVE menu items. Select the

SWITCH button to change disk directories, click on a disk, then select the drawer. If you're saving, type a filename in the FILE edit field and press RETURN. Note that you cannot load a Videoscape 3D object. When making one, you should save it as a ROT object too. Then if you want to make changes, load the ROT version, edit it, and save it both as a Videoscape 3D object and a ROT object.

The other items in the OBJECT menu allow you to erase the whole object, select the Videoscape palette or the ROT type, and choose between having all of the polygons visible or just the current one. The latter option is handy when you're working on a complex object.

## THE ACTION EDITOR

Once your object is created, choose SWITCH TO ACTION EDITOR from the ACTION menu. The Action Editor screen will appear containing your object. Now you can see your object from different angles by either creating an action for it, or loading a ready-made one with the LOAD ACTION option in the ACTION menu.

## CREATING AN ACTION

The 'action' or mini-movie you can create is 24 frames long. Select the frame to work on with the FRAME slider. The object will be drawn according to the parameters you set in the ROTATIONS and TRANSLATIONS edit fields. To change a value, delete the existing value, type a new one, and press RETURN. The values are checked to make sure they fall within acceptable limits. The object is then redrawn according to your new parameters.

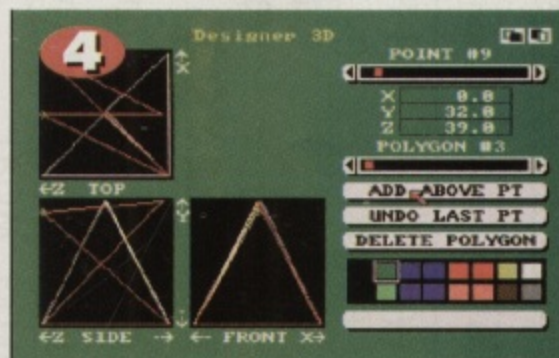

By making small changes from one frame to the next, your object will appear to move. For example, suppose the Y-rotation is set to 0 in FRAME 0, 15

in FRAME 1, 30 in FRAME 2, and so on until you hit FRAME 23, when it will be 345. If you now select the PREVIEW button, the object will rotate around the Y axis – you can adjust the speed of the action with the SPEED slider.

## THE ACTION MENU

By changing other X, Y, and Z parameters you can make the object go through all sorts of weird and wonderful contortions. To make the action play continuously, choose REPEAT AT END from the ACTION menu. A tick shows when this is activated. Now select PREVIEW and the object will spin until you select STOP. Another option in the ACTION menu is REVERSE AT END. With this activated, the frames will be shown from first to last and back to the first again.

The next item in the ACTION menu is CALC BETWEEN... With this you can have the program calculate and draw a group of frames. When you

Here's what happens if you get your points connected in the wrong order. Make sure you move round in one direction when you're placing the points, otherwise you'll have lines crossing each other, and some very strange results in the 3D editor.

**HOW TO ORDER:** Either phone for your free catalogue and use the order form attached, or write your order neatly on a piece of paper and send it together with a cheque or postal order made payable to PRODISC, to us at the address shown above. Please do not forget the appropriate postage.

Before you dive into *VideoScape*, test out your object with the Action Editor of ROT. This is a very basic animator, but will let you view your object in 3D without too much fuss.

select it a requester will pop up, asking for the first and last frame numbers of the group. Click on the digits to change them. For each frame, the program will calculate the X, Y, and Z parameters to get from the first frame to the last. For example, set the Y-rotation of FRAME 0 to zero, and FRAME 12 to 180. Choose CALC BETWEEN... and set the start and end frame numbers to 0 and 12. Select DO IT! and each frame in-between is given a larger and larger Y-rotation. Now set the Y-rotation of FRAME 23 to 345 and CALC BETWEEN... frames 12 and 23. You should now have a smooth rotation about the Y-axis.

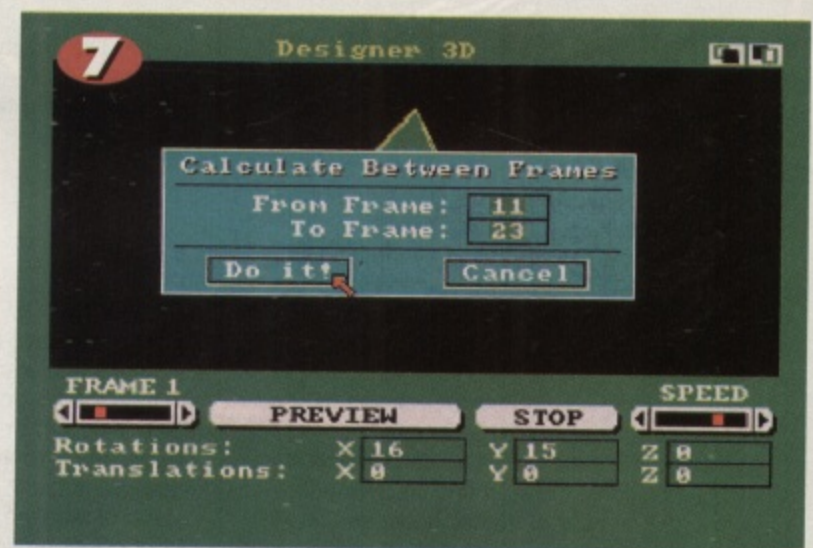

When calculating steps of rotation, the direction ROT chooses is the one that will move the object through the smallest angle. If the starting frame is set to zero degrees and the last frame to 270, the object will be rotated -90 degrees, not +270. This is why the example above was done in two parts. If you tried CALC BETWEEN... frames 0 and 23, ROT would have rotated the object -15 degrees. Actually, due to rounding errors, all frames but the last would have had a 0 Y-rotation.

When the frames are played back, each one is drawn on top of the previous frame, thereby erasing it. But if you use too large an X-translation with a large solid object, the frames will not overlap very much, and a trail is left on the screen. To fix this, use smaller steps of X-translation or reduce the size of the object by applying a constant Z-translation to make the object seem further away. For example, you can enter a Z-translation of, say, 100 for every frame to keep the object far away.

Once you're happy with your object, select SAVE AS VIDEOSCAPE OBJECT from the OBJECT menu.

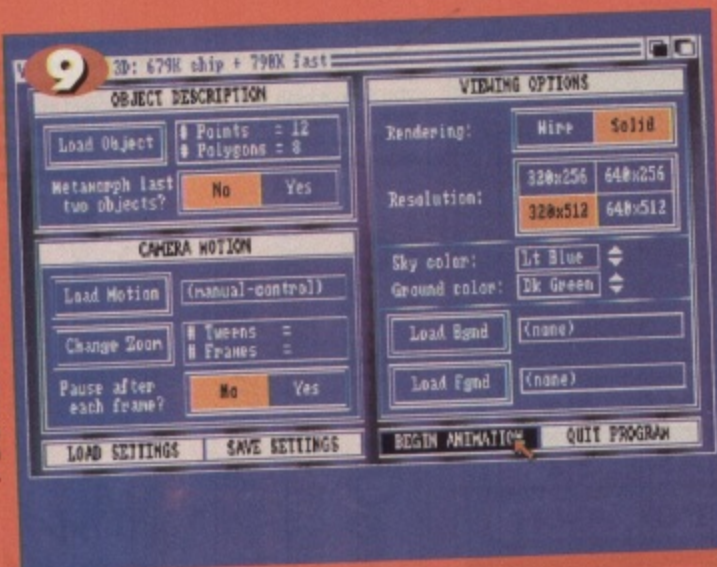

To save you the bother of entering the rotation and position data for each frame in the Action Editor, use the Calc Between function to work out the frames between any two you care to define. If you want a 360 degree rotation, be careful to use the Calc Between function in two stages: once to move the object 180 degrees, then once again to move it through the remaining 180 degrees. Try doing it in one go, and you won't get any results, as the start and end values are both zero degrees.

Defining the panning and movement of the 'camera' is not the easiest of tasks. The 'motion file' as it's known, must be input in the form of an ASCII file. You can use any text editor or ASCII wordprocessor for this, but the PD text editor ED is included on the first disk in the C: directory. The first three figures of the line refer to the X, Y, and Z co-ordinates, while the second three define the degrees of rotation around the Y, X, and Z axes respectively.

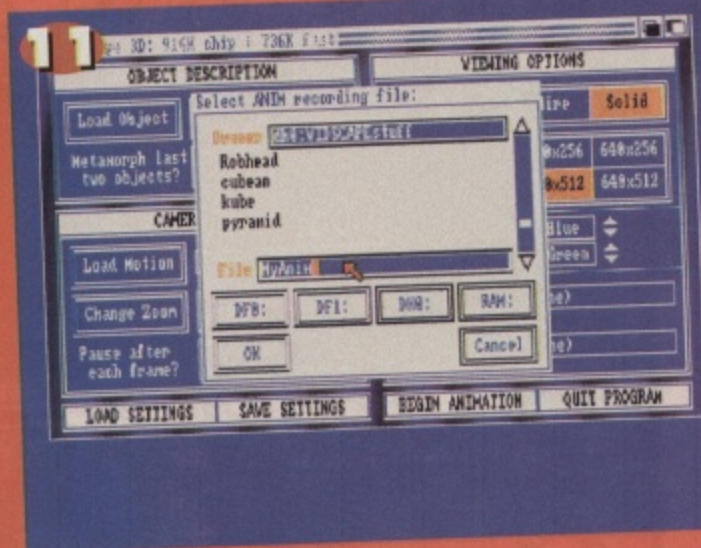

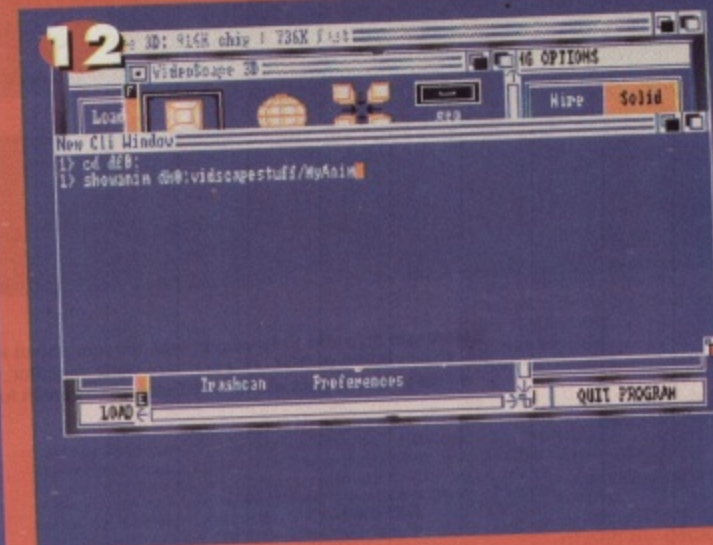

With your objects loaded and your animation files in place, it's time to see how it all comes together. Turn Interface mode off from the menu bar, Hit BEGIN ANIMATION and watch your first flickery frames appear on screen.

Select BEGIN RECORDING from the Record menu, and enter the path and filename for your soon-to-be-created animation file.

There she goes! Flying through the air with the greatest of ease, your light aircraft tumbles and rolls around the blue skies.

To run your finished animation in real time, put disk one into DF0:, enter CD DF0:, [return], and then SHOWANIM followed by the path and filename you defined earlier. Now just sit back and watch your wonderfully smooth 3D animation.

## CREATING ANIMATIONS

When it comes to animating your object, there are two types of motion to be considered. The first is the motion of the object itself, and the second is the camera movement. Time to pay attention at the back now, because it gets a little bit complicated at this point.

All movements are controlled by motion files. These are ASCII files, created in a text editor or wordprocessor. The old public domain editor, ED, is included in the C: directory of the first disk. Using this, or your preferred editor, you can now create a file to determine how your object moves, and how it's recorded with the camera.

Movements are described by defining the start and finish positions, the start and finish orientations, and the number of frames between them. Positions are referred to in the form of positive and negative X, Y, and Z co-ordinates. Orientations are referred to as degrees of heading (rotation around the Y axis), pitch (rotation around the X axis), and bank (rotation around the Z axis).

Every motion file must start with a code that defines whether it's a camera or object motion file. '3DC1' indicates a camera file, where as '3DM1' indicates an object motion file. After this, the next line should state the number of 'key frames' in the animation. Key frames are the only frames that you specify with position and rotation co-ordinates. All the frames in-between are calculated by Videoscape 3D. These frames are known as 'twens'. The subsequent line should have six co-ordinates, separated by a space. The first three are the X, Y, and Z values, and the second three are heading (H), pitch (P) and bank (B). The number on the line below is the number of frames to generate between this and the previous camera

position. The file can have up to 25 key frames.

Here's an example of a brief camera motion file:  
3DC1

```
2
-5 0 -5 45 0 0
0
5 0 -5 -45 0 0
60
```

Be careful to save these files out in straight ASCII, and check that you haven't made any typos. You can then load in your motion file by clicking on LOAD MOTION in the CAMERA MOTION box in Videoscape's front screen. Object movements can be programmed in just the same way, except that instead of heading the file '3DC1', use '3DM1'.

For object motion files, there's an alternative route. When you load an object, Videoscape 3D proceeds to load a motion file. By selecting the box marked MANUAL on the file requester, you can enter your own flightpath with the Object Motion Requester. You can only enter two key frames this way, but it's a lot easier than writing out an ASCII file. Enter the start co-ordinates and rotation values in the top set of boxes, and their target values in the lower boxes.

## RUNNING THE ANIMATION

Now that you've got your objects and motion files, you can see how they work together. After setting the INTERLACE option on the DISPLAY menu to off, click on BEGIN ANIMATION. You should now see your object going through its designated motions. At any time during this stage, pressing ZERO on the numeric keypad will bring you back to the main screen. The frame rate will be slow here,

as Videoscape 3D isn't a realtime 3D animator. Once you're happy with the animation, you can then save it to either floppy or hard disk, from where you can run it at full speed, without suffering any flicker.

To do this, select BEGIN ANIM RECORDING from the RECORD menu. A file requester will appear, which you can then use to specify the path and filename for your animation. If you're using floppies only, make sure you have a formatted disk to hand. Select the path, and name your file. Then click on BEGIN ANIMATION. As before, the animation will slowly flick through the frames, but this time they'll be saved as an ANIM file.

Once it's all finished, you can view your animation with the SHOWANIM utility. Open up a CLI window with the first disk in DF0:, and type CD DF0: [RETURN]. Then type SHOWANIM, followed by a space, and the path and filename you assigned to your animation, followed by [RETURN]...and there you go. In the blink of an eye, you've just created a lightsourced 3D animation.

## NEXT MONTH

We'll conclude the tutorial with a look at some of Videoscape 3D's more advanced features, with the final installment in CU Amiga's step-by-step guide to pro-quality 3D animation, with more illustrated tips and techniques to help you get the most from this excellent program.

## CUSTOMER CHARTER

INDI Direct Mail is original and very exciting. Before you buy mail order you must first be confident that you will receive the product you've ordered and that the supplier will still be there in the future, should you need them.

A mail order purchase from INDI is a safe and secure decision, and here's why.

INDI is a wholly owned subsidiary of a public company now in its tenth year of trading and specialising in the supply of computer products.

With a turnover approaching £30 million per annum, we have the resources and the purchasing power to offer you the best deals, deliver them next day nationwide and always be around when you need us.

## SALES AND SUPPORT

The INDI sales team have been trained to take your order with the utmost care and efficiency. All stock offered for sale is held in stock, centrally at our group warehouse complex and is available for next day delivery, direct to your home or business. If at any time we are out of stock your money will not be banked until the product is available (a point worth checking should you feel tempted to purchase elsewhere).

General information regarding product is available from our sales team, however technical support is always on hand should you need assistance.

All prices quoted are inclusive of VAT.

### INDI TELESales

Tel 0606 43860 Fax 0606 43825

## DESPATCH

All orders received by 6pm Monday to Friday are despatched that day for next day delivery using our national carrier — Securicor. (UK Mainland only). Saturday deliveries are available at a small surcharge. If you are out when we deliver a card will be left at your home giving you a contact telephone number to arrange a convenient re-delivery. Delivery queries can be resolved immediately using our on-line computer. All orders are despatched on a next working day delivery basis. Cheque orders are despatched immediately on cheque clearance, usually 10 working days from receipt. A delivery charge of £5.00 is made per item unless otherwise stated.

**WE ALSO ACCEPT B.F.P.O. ORDERS (DUTY FREE). CARRIAGE CHARGED AT UK POSTAL RATES.**

## AMIGA A600

## THE WILD, THE WEIRD AND THE WICKED PA

12 MONTHS AT HOME SERVICE

## TOTAL HOME ENTERTAINMENT SYSTEM

MONITOR NOT INCLUDED

**COMMODORE AMIGA CDTV**  
 THE MULTIMEDIA COMPUTER

 GOLDSTAR 14" REMOTE TV/MONITOR  
 FEATURED AVAILABLE SEPARATELY AT £179.99

**INDI PRICE**
**£489.99**
**FREE!**

**AUDIO**  
 Blues Brothers  
 (CD Audio) £12.99

**AMIGA**  
 Pipemania • Populous  
 Kickoff 2 • Space Ace  
 £122.52

**MULTI MEDIA**  
 Lemmings CDTV  
 £34.99

The problem with any new product is that it always takes time for everyone to realise its full potential. CDTV is no exception and in our opinion everything we have read does a pretty poor job of explaining just what CDTV can do and why it is so exciting.

**THE INDI GUIDE TO CDTV**

**IT'S A CD PLAYER** —Yes, it will play all your Primal Scream, Pavarotti, Pink Floyd and any other CD you care to mention in superb high quality stereo, with remote infra red control.

**IT'S AN AMIGA** —Plug in the keyboard, switch on the external disk drive and the colossal range of inexpensive Amiga software can be used on your CDTV.

**IT'S A MULTIMEDIA SYSTEM** —Just imagine, stereo sound, images and text all on screen. It asks a question, you respond, it responds — truly interactive! Each CD disc holds hundreds of megabytes of data with instant optical access. The whole of Hutchinson's Encyclopedia fits onto 1 disc. This interactive system is a unique aid for Education, Business or Leisure. The future is here!

**PACK CONTENTS AS STANDARD**

- Amiga CDTV Player
- CDTV keyboard
- CDTV 1411 3.5" Disc Drive
- CDTV Infra red remote controller
- CDTV wired mouse
- CDTV Welcome Disc

- Manuals
- Fred Fish CDTV
- Lemmings CDTV (£34.99)
- Blues Brothers (£12.99)
- Pipemania, Populous, Kickoff 2, Space Ace (£122.52)

CDTV CONNECTS DIRECTLY TO YOUR TV SET

**CDTV SOFTWARE**

If you already own a CDTV or are just about to purchase one you'll be pleased to know that INDI stock probably the largest and most comprehensive list of CDTV software in the country. Below is a list of top selling titles we are offering at very competitive prices. For more details please phone our sales team. (Prices include postage).

# Panasonic Quiet Colour Printing

We researched the colour printer market in great depth to find a colour printer good enough to cope with Amiga's powerful graphic output, yet at an affordable price.

We found the perfect printer in the Panasonic KX-P2180 + KX-P2123 quiet printers.

We then considered that if you were going to buy a Panasonic printer, you would probably need a quality word processing package to use with it. We found that too, in 'Wordworth', yet at a retail price of £129.99 we thought that might be a little too expensive on top of your printer purchase! So together with Panasonic we decided to give a copy of 'Wordworth' free with every Panasonic printer. How's that for added value?

## Panasonic KX-P2180

The new Panasonic KX-P2180 9 pin quiet colour printer. Produces crisp clear text in mono or in 7 glorious colours with new quiet technology. The new KX-P2180 is typically 15dBA quieter in operation, than the competition.

- **Fast Printing Speeds** 192CPS Draft and 38 CPS NLQ
- **Colour Printing** 7 colour palette (blue, red, green, yellow, violet, magenta and black)
- **QuietPrinting** Super quiet 45-48dBA sound level (most matrix printers are typically in excess of 60dBA)
- **6 Resident Fonts** Over 6,100 type styles using Courier, Prestige, Bold PS, Roman, Script and Sans Serif Fonts
- **3 Paper Paths** Paper handling from bottom, top and rear for total flexibility
- **1 Year Warranty** For total peace of mind

INDI PRICE

£199.99

## \* WORDWORTH — COMPLETELY FREE! WITH PANASONIC QUIET PRINTERS

The writers choice. The ultimate word processor for AMIGA computers. Wordworth is undoubtedly the ultimate word/document processor for the full range of AMIGA computers. The graphical nature of WORDWORTH makes producing documents faster and easier, with the enhanced printing fonts (including full Panasonic KX P2180 and KX P2123 colour printing support), Collins spell checker and Thesaurus, no other word processor comes close.

"Without doubt this is one of the best document processors for the AMIGA, Today." (Amiga Format).

NORMAL RRP £129.99 inc. vat

## Panasonic KX-P2123

The new high performance Panasonic KX-P2123 24 pin. Quiet colour printer offers leading edge quiet printing technology at an affordable price.

- **Fast Printing Speeds** 192 CPS draft, 64 CPS LQ and 32 CP SLQ.
- **Colour Printing** 7 colour palette (blue, red, green, yellow, violet, magenta and black)
- **QuietPrinting** Super quiet 43.5-46kBA sound level (most matrix printers are typically in excess of 60dBA)
- **7 Resident Fonts** Over 152,000 type styles using Super LQ, Courier Prestige, Bold PS, Roman, Script and Sans Serif Fonts
- **24 PIN Diamond Printhead** High performance and high quality output
- **1 Year Warranty** for total peace of mind.

- UU001 A-GRAPH - Very easy to use - make bar + line graphs + pie charts. (+)
- UU002 CLI TUTORIAL - Learn all about the CLI. Given 70% rating in magazine. (+)
- UU003 MESSYSID V2 - Reads and writes PC disks. Given magazine rating of 95%. (+)
- UU004 POOLS PREDICTOR - Increase your chances of becoming a millionaire. (+)
- UU005 DISK OPTIMISER - Brilliantly simple! Any disk loads up to 15 times faster. Mag rating of 95%. (+)
- UU006 A 500 PLUS EMULATOR - Emulate the Amiga Plus on your 1.3 Amiga. Really works (IMG Rep).
- UU007 FREECOPY V1.1 - Removes password protection to allow copying. (+)
- UU008 CURSOR V1.0 - Compiler for Amiga Basic programmes. (+)

### New Games & Education

- N001 TOTAL CONCEPTS (2 DISKS) - Very well presented story books about astronomy and dinosaurs. (+)
- N002 AMERICAN FOOTBALL COACH - Play the role of an American Football Manager. (+)
- N003 BATTLEMENTS - Similar to Hunchback on the Spectrum and C64. (+)
- N004 OTHELLO - The best P.D. version of this classic board game. Adjust skill level and facility to review where you went wrong. (+)
- N005 CRAZY SUE - The best Public Domain platform game.
- N006 SUPERLEAGUE MANAGER - Football management game. (+)
- N007 METRO - Mini sim city. (+)
- N008 SMASH TV THE RIP OFF - Great stuff. (+)
- N009 HENRY IN PANIC - Jet set Willy clone. (+)
- N010 MISTER & MISSIS - Amusing and cute platform/arcade adventure with two characters to control. Excellent fun! (+)

- UU009 BROWSER II - An alternative to SID. Some may find it easier and better. Very popular. (+)
- UU010 PC TASK V1.04 - Powerful multi tasking PC emulator, supports CGA graphics, MS DOS floppies and even your hard drive. (+)
- UU011 NIB V2.0 - Removes protection and copies. Very powerful. (+)
- UU012 GATORS GRAPHIC GALLERY - Examples and step by step tutorials on how to create professional logos like ones found in demos. (+)
- UU013 FISH TANK SIM - Simulates an aquarium. (+)
- UU014 ANALYTICAL SPREAD (2 DISKS) - This is the best spreadsheet program to date on the Amiga. (+)
- UU015 AMIGA PUNT PROGRAM - Predict which horse will win from past form. (+)
- UU016 JR COMM V1.02 - Latest version of this useful modem program. (+)
- UU017 BEATRIX POTTER CLIP-ART - An excellent collection of clip art for any DTP program or D-Point. (+)
- UU018 PLOTTING AND GRAPHICS (2 DISKS) - Contains a powerful full featured plotting prog. and a computer aided drafting prog. (+)
- UU019 DB - A database with up to 50 fields, max of about 1.2 million records. (+)
- UU020 HOME MANAGER - A great all in one address book with an inventory database + to do list. (+)
- UU021 ASTRO PRO ASTROLOGY - The best astrology program on the Amiga by far. See Amiga Shopper. (+)
- UU022 MULTI DOS V1.12 - After this disk has been installed your Amiga drives can read 1MB disks. (+)
- UU024 TEXT PLUS V4.0 (E) - Latest update of this excellent word processor program. Now compatible with TeX the professional typesetting prog. Found in the Fish Collection. (+)
- UU025 AMOS LESSON 1 - Find out how to get the most out of AMOS. Had good review. (+)
- UU026 EDWORD 2.2 - Best text editor around. Received 9/10 from Amiga Shopper. (+)
- UU027 MEGACOLOR V1.0 - A program which transforms a b/w screen into a full colour screen. (+)

- N011 DUNGEONS OF MALON - Compares to likes of Dungeon Master and Eye of the Beholder. Stunning graphics and atmospheric sound effects. (+)
- N012 CALORIEBASE - Received 89% in CU Amiga. Keep a daily database of your calorie intake. Useful for dieters. (+)
- N013 BACK TALK - Discusses common lower back problems, the causes and treatments given. Uses detailed pics + anims. (+)
- N014 TRAINING LOG - Make a detailed log of your fitness training. (+)
- N015 SPANISH, FRENCH, GERMAN, ITALIAN TUTORIALS - Four great language tutors. (+)
- N016 A VISIT TO THE RED PLANET - Guided tour of Mars - fascinating! (+)
- N017 GCSE MATHS I - Written by maths teacher this is an excellent product. (+)
- N018 TOTAL WAR - The bomb game risk as reviewed in Amiga format. An excellent production. (+)
- N019 AMOS FRUIT MACHINE II - Faithful reproduction of the pub fruitie. (+)
- N020 CATACOMB V1.7 - A graphical adventure game set on a small island. Discover secrets & treasures of the underground maze. New version. (+)
- N021 TRON CLADS (1MB) (2 DISKS) - Update to the excellent strategic war game. (+)
- N022 CLASH OF THE EMPIRES (2 DISKS) - Brilliant strategic war game by T.A. Sear. (+)
- N023 COLOSSAL CWE V1.0 - Virtually identical to the original classic. (+)
- N024 LEGEND OF LOTHIAN V1.02 - An adventure game in the vein of the Ultima game series. Includes colourful graphics, hordes of monsters & puzzles to solve. (+)
- N025 BATTLEMENTS - HUNCHBACK - This is a conversion of the old classic game. Great stuff! (+)
- N026 AMOS CRICKET - An excellent arcade cricket simulator with neat colourful graphics. (+)

### Games

- G357 TETRIS CLONES - Really enjoyable derivatives. (+)
  - G358 AIRMANIA - Was a trip of a lifetime. (+)
  - G359 EXILE GAME PACK DISC - Great collection of games. (+)
  - G360 BATTLE OF BRITAIN - Not yet seen. (+)
  - G361 CARD SHARP - Not yet seen. (+)
  - G362 GALECTIC FOOD FIGHT - Great shoot em-up. (+)
  - G363 RAPHAELS REVENGE - Turtle fun. (+)
  - G364 GROWTH - Blitz that expanding brain. (+)
  - G365 MISSION - Not yet seen. (+)
  - G366 JETMAN - Version of Spectrum Game. (+)
  - G367 GAMES BLITZ - Compilation of Spaley games. (+)
- The following games have been reviewed and given 80% or over:
- G369 CEREREY ASTEROIDS Direct copy of arcade asteroids. (+)
  - G370 AMIGOODS - Fab graphics on the asteroids clone. (+)
  - G371 SEVEN TILES - Futuristic football style game. (+)
  - G373 LADYBOG variant on the old Pacman classic. (+)
  - G374 AMIGATRATOR - A collection of brilliant mind games. (+)
  - G377 STORYLAND II Brilliant role play game. (+)
  - G001 ALL NEW STAR TREK (2 DISKS) - 2 DRIVES - IMG - The best star Trek game around. (+)
  - G278 AIR ACE II Enjoyable shoot em up in planes. (+)
  - G210 AIRWAR - A large number of flight simulators. (+)
  - G051 FRANTIC FREDDIE Brilliant platform game. (+)
  - G310 SURVIVOR - Outstanding role play game. (+)
  - G086 PROPERTY MARKET - Find out if you've got a head for business. (+)
  - G292 SEALANCE - Highly praised submarine game. (+)
  - G321 SCUM HUNTERS - Blast the scum out of East London. (+)
  - G220 STAR TREK - (3 DISKS - 2 DRIVES) - very impressive. (+)
  - G277 TRUCKIN' ON (2 DISKS) - Enjoyable strategy game. (+)
  - G268 WHEEL OF FORTUNE - Excellent version of TV prog. (+)
  - G342 DOWNHILL CHALLENGE Great fun skiing game. (+)
  - G343 POM POM GUNNER - Shoot down those enemy planes. (+)
  - G349 SIMON SAYS/SPACE MATHS - Get your kids to learn sound/calculus/math. G350 EDUCATION FOR UNDER 10's - Loads of enjoyable/educational games. (+)
  - G353 DARK STAFF - Spectrum adventure game now shareware - very entertaining. (+)
  - G354 AMIOMEGA - Absolutely outstanding role play game. (+)
  - G355 HOLLYWOOD TRIVIA - very fine quiz game. (+)
  - G501 TEXT ADVENTURE GAMES PACK (4 disks) - Over 10 great games including Survivor and Star Trek. (+)
  - G499 ULTIMATE PLATFORM GAMES - Whizzy's Quest & Mayhem Miner. (+)
  - G338 NO MANS LAND - Brill 2 player combat game. (+)
  - G339 GAMES BONANZA - 22 Games on one disk - Amazing! (+)
  - G344 LLAMA COLLECTION - Llamatron & Metagalactic Llamas. (+)
  - G345 SHOOT 'EM UP PACK - Includes Star Trek and Retaliator & more great fun. (+)

### Games Compilations

- GAMES GALORE VOL. 1 - Drup, Bally, Yabze, Tic Tac Toe, Amos, Othello, Tron, Chess, Tiles, Danks. (+)

## Workshop

ISSUE 1

DECEMBER 1992

*It's time for a change we said – so here it is. As was hinted at in the last issue, we've completely revamped the blue pages. Well, they're still blue, but now they're called Amiga Workshop. That's not the only change however, but to find out more you'll have to turn the page and take a look.*

### 165 BOOKSHELF

Once again we tell you what's hot and what's rot in the world of Amiga books. Want to use the Amiga to help with home movies? Then we've got the books for you, plus tricks and tips for beginners.

### 169 PROGRAMMING TUTORIAL

You asked for help, so we provide it. If C means nothing more than a letter of the alphabet, then this is the tutorial for you.

### 172 QUESTIONS AND ANSWERS

If there's a question that Mat Broomfield can't answer we've yet to hear it.

### 178 Q&A OCTAMED SPECIAL

After his fabulous *OctaMed* series, Mat returns to provide more answers to those tricky problems.

### 179 Q&A RAM EXPANSION SPECIAL

With more and more games requiring 1Mb of memory, not to mention the more serious software, a memory expansion is almost a prerequisite. They're not always easy to handle though, as this section proves.

### 183 COMMS

After last month's venture into the world of bulletin boards we couldn't get Mat Broomfield off the phone. He returns with Part 2 to the CIX guide.

### 184 CLUB CALL

Computing isn't a solitary pursuit, and to prove it Club Call is here with a run down of Amiga-specific clubs.

### 186 AMIGA WORLD

Who said Amigas just sit on a desk and run programs? Mike Gerrard talks to one man who can make them run robots.

### 189 BACKCHAT

Once again our letters page is crammed with comment, controversy and cranks.

### 193 NEXT MONTH

Did you honestly believe us when we said that the Next Month page was no more. It returns from the dead to haunt the back end of the mag.

# BOOKSHELF

**There's something for everyone this month, with a varied selection of books covering a wide range of topics from beginner's guides to the video potential of the Amiga.**

To start off, Mat Broomfield takes a look at three books which offer a kickstart to new Amiga users.

## **COLLINS DICTIONARY OF PERSONAL COMPUTING** **PRICE: £6.99**

If ever a language was rife with jargon, it's Computerspeak, the strange computer dialect in which virtually nothing means the same as it does in the 'real' world. Sprite, RAM, run, drawer, window and drive are just a few expressions which take on entirely new meanings when used in the context of computers. No longer is 'bits and bobs' used to describe miscellaneous objects; now a bit is a unit of computer memory, whilst a bob is a graphic character (Blitter Object).

And there's another thing; computer buffs seem to be absolutely addicted to acronyms and abbreviations. WYSIWYG (What You See Is What You Get), ROM (Read Only Memory) and PSU (Power Supply Unit) are just three of the commonly used abbreviations that you're expected to know, but there are literally hundreds more.

How many times have you been reading a review of a product only to encounter an expression that seemed important, yet meant absolutely nothing to you? Dozens, I bet. With the Collins Dictionary of Personal Computing (CDOPC or Coldicoperco as it will doubtless be known!), you need never be left in the dark again...

Well, almost never. To be honest, the dictionary doesn't contain any Amiga-specific references, such as the names of the custom chips, but there are literally thousands of generic computer expressions which are equally used in the Amiga environment.

Entries range between half a line for 'DP', to over a page for 'AD converter'. Strangely enough, there doesn't seem to be much in the way of graphic entries, such as 'ray tracing', although 'fractals' are described,

and a fair amount of space is devoted to audio-related expressions, such as 'amplitude' and 'digital-to-analogue' converters.

The entries are listed in concise and fairly easy-to-follow language, although some of the more complex subjects will require an understanding of less complex ones in order to appreciate their definitions.

Where appropriate, multiple worked examples and annotated illustrations are provided to supplement the text, and these help greatly when dealing with some complex subject matter.

This is the kind of book that one can open in search of a specific entry and end up reading for hours out of sheer fascination. An absolutely essential purchase for anyone hoping to fully understand modern computer technology and terminology. At only £6.99, it must surely be the best value computer book yet. Available from W.H. Smith.

## **THE BEST AMIGA TRICKS AND TIPS** **PRICE: £29.95**

The Amiga has many abilities which are not described in any of Commodore's official documentation or manuals, and so, in a sense,

Amiga owners have also had to live with the feeling of working with an 'incomplete' machine, or rather, of not being able to fully exploit the machine that they already have.

This book goes some way to restoring the equilibrium, because it provides hundreds of 'quick'n'dirty' solutions to common programming and Workbench situations. To a certain extent, it also serves as a beginner's guide to a number of subjects too. It covers CLI and Shell, Amiga Basic, Workbench, machine language and hardware.

The CLI/SHELL section starts off at total novice level, describing how to open and close a Shell window, as well as how to break out of a Shell script once it's started running. This section also includes a list of many common commands, before progressing to more useful subjects such as start-up sequences, and the mount list. Unfortunately, these latter subjects are covered in nothing but the most cursory of fashions.

A massive chunk of the book is devoted to Amiga Basic. Unfortunately, the usefulness of this section is somewhat eroded by the fact that Microsoft Basic is no longer given away free with the Amiga. However, there are many areas of similarity between AMOS and Amiga Basic, so it's possible that you may find some relevant tips here. The section covers such topics as graphics, gadgets, fonts, intuition and vectors to name but a tiny fraction.

Having delved deep into the darkest complexities of Amiga Basic, the book takes a retrograde step and explains Workbench from a beginner's perspective, describing features such as Trashcan, extended selection and the icon information screen. There is a brief description of some handy keyboard shortcuts (or 'tricks' as the book describes them), but this is pitifully short and only whet my appetite for more substantial information.

Icons are a fairly logical progression to the Workbench, but again the book's inconsistency is revealed.

Yes, it does cover icons, but from the absolute simplicity of the Workbench, the section on icons dives in with such beauties as the Disk Object structure and a bit by bit analysis of icon file headers. Unfortunately, this information is totally incongruous and out of context with the previous chapter and only really serves to highlight the book's schizophrenic nature.

From icons to machine language, examples are given of how to avoid gurus when attempting to divide by zero, how to write anti-boot viruses and how to run machine code programs from Basic. Again, this section seems somewhat shallow.

The hardware section briefly extols the virtues of different processors and co-processors, as well as describing how to quieten fans on an A2000.

The book is rounded-off with a selection of mini-tips covering all sections.

Despite the fact that this book was only published in 1990, it now seems severely dated, and has largely been overtaken by developments in the Amiga world. If you have a keen interest in Basic, I think that you'll find that it contains much valuable advice, but complete beginners may consider it too expensive considering the small amount of coverage suitable for them, whilst C and 68000 programmers will probably find it all a bit too insubstantial.

Check it out before you buy. From: Computer Bookshops, 50 James Road, Tyseley, Birmingham B11 2BA; Telephone: 021 706 1250. Price: £29.95.

## **COMPUTE'S BEGINNER'S GUIDE TO THE AMIGA** **PRICE: \$16.95**

Despite its WIMP environment, and fairly friendly user interfaces, many beginners (and some long-term owners) find the Amiga to be a deeply intimidating piece of equipment. The machine in itself is not the scariest part, what really puts a lot of people off is the instructions that come with it. Software packages are often even worse, with instructions to make Einstein scratch his head in bewilderment! What these hesitant beginners need, is their own personal Uncle Remus to sit them on his knee, and gently introduce them to the wonderful world of computers.

In an environment in which the ground-rules, and indeed the computers themselves, can change utterly in the space of a few short weeks, no book can ever hope to be fully up to date, and this book is considerably much further behind the times than most. Even so, it has a truly wonderful style which compensates for its lack of contemporariness (yes, there is such a word!).

Written in the days when the

# Mastering Amiga

Great new books for all Amigas...

At last a definitive and totally comprehensive guide to Workbench 2 on the Amiga. Ideal for the beginner and experienced user alike this book covers every aspect of Workbench useage from copying files to the use of Tool Types. A must for all Amiga users!

**Mastering Amiga Workbench 2** by Bruce Smith, 328 pages, £19.95, ISBN: 1-873308-08-6.

This book is guaranteed to get the serious Amiga owner into 68000 assembly language programming as quickly and painlessly as possible. It assumes some experience of high-level languages such as BASIC, but explains all new concepts through copious examples.

**Mastering Amiga Assembler** by Paul Overaa, 416 pages, £24.95, ISBN: 1-873308-11-6.

A fascinating introduction to all the main features of the top-selling AMOS. Packed with examples for the reader to experiment with. 3D and demo programming developments are brought right up to date. The next step after BASIC! Covers AMOS, Easy AMOS and AMOS Professional.

**Mastering Amiga AMOS** by Phil South, 320 pages, £19.95, ISBN: 1-873308-12-4.

...from the best of British authors - names you can trust.

.....

A1000 was still something special, the parts of the book which deal with setting your system up, are naturally of little use unless you've inherited one of the beasts from somewhere. However, the book goes on to talk about more general subjects such as the screen, add-ons, Workbench, history of the Amiga, etc. It has a relaxed and easy to follow style which transforms learning into an effortless and enjoyable past time.

The book contains a great deal of generic information such as the theory of Amiga sound and graphics, telecommunications, the operating system and games. I wouldn't really recommend this book for people who want to learn a lot of specific information about the Amiga, but for readers who want to acquire a more general overview of the machine and its possibilities, this is a very good starting place. Unfortunately, because it was written long before the arrival of Workbench 2.0, it may cause more confusion than it resolves for A500+ and A600 owners but otherwise an interesting and worthwhile read for experienced and amateur users alike. \$16.95 from Compute!, PO Box 10775, Des Moines, IA 50347-0775, USA.

To end the reviews, Steven Magil takes a look at two titles designed to help Amiga owners make the most of their home movies.

Desktop video is potentially one of the most exciting aspects of the present Amiga revolution. The Amiga is without doubt the most capably equipped home computer existing in this innovative field.

### AMIGA DESKTOP VIDEO POWER PRICE: £27.45

Abacus is a well known publishing name among the Amiga and ST fraternity. However, in the past, the quality of some of their books has left a lot to be desired. This reputation should not be allowed to intrude when considering ADV Power.

Written by Guy Wright – a founding editor of Amiga World magazine – the book consists of 270 pages and a companion disk. Weighing in at a hefty £27.45, it could hardly be represented as a value for money purchase. Granted, it contains some very useful information, but bear in mind that due to the nature of the market, it belongs to the 'out of date as soon as it's published' category.

Desktop Video Power begins with a brief introduction outlining why it has been written. It aims to illuminate the areas of video and computing which cause confusion to those familiar with only one side of the story. It does this reasonably well, although the author does assume that the reader knows more about the computing side than he/she knows about video.

So far so good. The first couple of chapters represent a very competent, if not entirely expert, overview of video equipment and covers the minimal requirements for a successful desktop setup.

Written in a summarised form, the topics discussed begin with a brief outline of the different broadcasting standards used throughout the world. From this broad beginning, we fly into the composition of video signals and the need for clean and stable synchronisation signals. The foibles of video decks and the fact that they are the worst culprits for outputting unstable sync are explained thoroughly. Solutions for these problems are discussed, although many of them may make you balk at the potential expense, i.e. equipment that accepts external sync generation or Time Base Correctors connected to every piece of equipment – you need loads of money for this.

Very good advice, but most readers may decide to pass on the expense for the moment.

One necessity which shouldn't be overlooked, if at all possible, is the inclusion of flying erase heads on camcorders and video tape recorders. Without flying erase heads, glitch free editing is virtually impossible. This point is perhaps overly stressed, but you certainly get the message.

Incidentally, on the point of glitch free edits, the author uses a couple of diagrams to explain the mechanics of flying erase heads and the technical reason for glitches. These are the only diagrams to grace the whole book. This is a mistake.

Without dragging up the old cliché of a picture painting a thousand words, diagrams make the explanation of concepts much easier to understand. Considering that video is a visual medium and that this book is about video, it seems to be a gross oversight when the aim of the book is supposedly to illuminate those persons currently residing in desktop video darkness.

The rest of the volume is mainly concerned with Amiga software and peripherals. The book is left somewhat weaker by the fact that it is written for an American audience. Prices are in dollars (what about our devalued pound?!) and some of the equipment is not available in Britain.

Despite this, the topics are dealt with in a general enough manner. This ensures that even the least aware Amiga owner will be able to think of alternatives to the software and hardware recommendations. One of his recommendations is the purchase of *Moviesetter* – CU Amiga readers no doubt already own this package courtesy of our coverdisks.

In wrapping up the book, the author voices his recommendations for different budget set-ups. He manages to make the minimum configuration sound horrendously expensive, which it needn't be.

Finally, he covers advanced techniques. Here lie some of the worst omissions of the book. Only SMPTE (Society of Motion Picture and Television Engineers) timecode is discussed for advanced editing. There is no mention of VITC (Vertical Interval Time Code) or Sony's RCTC (Rewritable Consumer Time Code).

With the requisite software, an edit controller such as Video Pilot hooked up to the Amiga, MIDI equipment, and Video Decks such as the Panasonic NVFS 90, you could have a domestic system that rivals SMPTE in its editing abilities, at a fraction of the cost. Unfortunately, none of this information or vision is forthcoming due to the dated nature of the book.

Despite the reservations – that the book is overpriced, American and out of date – Amiga Desktop Video Power can be tentatively recommended. The style is pacy, informative and fires the imagination at the numerous creative possibilities open to the Amiga owning videographer.

The supplied disk has some limited useful utilities, the best being *Bars'n'Tone*, but realistically, it wouldn't be missed if it wasn't there.

### AMIGA DESKTOP VIDEO PRICE: £20.45

This brings us nicely round to Amiga Desktop Video by Steven Anzovin. Anzovin's pedigree is even more reliable than that of Guy Wright. He has already written a highly successful book on using *Deluxe Paint*, and he owns his own video production studio.

Whereas Power is primarily concerned with equipment and software, Amiga Desktop Video explains more in terms of concepts and practicalities for video filming, e.g. chapter 4 runs through the rudiments of a documentary shoot, lighting, back up equipment, treatments, talent, etc. In fact, the whole book from beginning to end reads like a flowchart of desktop video production.

Equipment and software recommendations reveal that despite some updating from its 1989 incarnation, the book is even more dated than the Abacus title. Despite this, Anzovin's tome has more lasting appeal, with many of its recommendations relying on the fundamental concepts of desktop video rather than specific equipment proposals.

The main feature that puts this book head and shoulders above the other is the reliance on diagrams and illustration to reinforce theory, information and understanding. Due to this enhanced clarity, the book is far easier to absorb.

Both books are overpriced and out of date. The information supplied by both is good, but the Compute! title wins hands down. The pricing of equipment is in dollars, which due to the nature of import taxes and exchange rates, is virtually useless to the British reader. The addresses for help are American, so there's little help there either. This disparateness only succeeds in highlighting the need for a British book to be written. If you feel that you need to know more about the subject and can't afford to wait for a British title to appear, buy Amiga Desktop Video from Compute! books.

## NAKSHA UPGRADE MOUSE

280 DPI quality replacement mouse - pack includes Mouse House, Mat and Operation Stealth game.

MJC Price £22.95

## A500 Plus 1Mb EXPANSION

1 Mb expansion for the A500 Plus - fits in the trap-door taking your memory to 2Mb - no internal fitting.

MJC Price £39.95

## NEW - ACTION REPLAY III

MJC Price £57.95

## SQUIK MOUSE

Great value replacement mouse.

MJC Price £12.95

## NEW - ROBOSHIFT

Auto sensing joystick/mouse switch box.

MJC Price £13.95

## CUMANA CAX 354 DISC DRIVE

Quality brand name 3.5" second drive includes thru port, disable switch and FREE Virus X Utility.

MJC Price £52.95

## NEW ROCLITE RF382C DISK DRIVE

New Super Slimline super quiet second drive

MJC Price £59.95 (Cream only)

## NEW - AMIGA A1200

The very latest Amiga computer - now offers twice the processing speed at 14.19MHz, 2Mb of Chip Ram as standard, the new AA enhanced chip set offering up to 16 million colours, a full 96 keys with numeric + cursor keypads. WB 3.0 and 12 months on-site warranty.

MJC PRICE £359.00

(price includes free courier delivery)

## AMIGA A600 COMPUTER

The "portable" Amiga, features surface mount technology for greater reliability and WB 2 comes complete with DPaint 3 and a great game. Plus of course 12 months on-site warranty.

MJC PRICE £271.00

(price includes free courier delivery)

## AMIGA A600 HD EPIC PACK

Amiga 600 with a genuine Commodore 20Mb hard drive fitted. The Epic pack comes complete with four games. DPaint 3 and an Amiga Easy Text WP

MJC PRICE £429.95

(includes 12 months on-site + courier delivery)

## PLEASE NOTE:

all the above computers are genuine UK models with nothing taken out of the packs. ALL come with a full 12 months on-site warranty + FREE courier delivery.

## AMIGA STARTER PACK

INCLUDES:- 10 discs, 40 cap. disc box. Joystick, dust cover and mouse mat.

MJC Price £19.95

(or just £15.95 if purchased with an Amiga)

## AMIGA A600 CONTROL CENTRE

Manufactured by Premier Micros these are made of sheet steel and epoxy coated to exactly match the A600. They are precision made to fit the A600 and offer a perfect base for a monitor and a shelf for your extra disc drive or peripherals.

MJC Price £34.95

(or just £29.95 if purchased with an A600)

## A600 1Mb EXPANSION

Increase your memory to 2Mb including clock.

MJC Price £44.95

(or just £39.95 if purchased with an A600)

## AMOS - The Creator

NEW - EASY AMOS - Powerful but easy	£24.95
AMOS v1.2 - The original language	£32.95
AMOS Compiler	£19.95
AMOS 3D	£21.95

## AMOS PROFESSIONAL

An enhanced version of the very popular AMOS program. Contains over 200 new commands, 650 page brand new manual and many more new features.

MJC PRICE £47.95

## MINI OFFICE AMIGA

Great new integrated package featuring Wordprocessor Database Spreadsheet, Graphics and Disc Utilities.

MJC PRICE £39.95

## NEW - VIDI AMIGA 12

Vidi Amiga 12 is the latest low cost colour digitiser from Rombo. There are no filters and no separate RGB Splitter. Colour images can be captured in less than a second. Mono images are grabbed in real time. Some of the features included are 1 - multi tasking software, Capture into a user definable window, Composite of S-Video input, 4096 colour HAM mode, 54 colour EHB mode and many more.

MJC PRICE £75.95

## MISCELLANEOUS

Pro Midi Interface	£19.95
Stereo Master	£29.95
Techno Sound Turbo	£28.95
Megamix Master	£28.95
Home Accounts 2	£36.95
Hisoft Devpac 3	£49.95
Hisoft Hi-Speed Pascal	£69.95
Maxiplan 4	£34.95
Deluxe Paint 4.1	£54.95

## NEW - KINDWORDS 3

Features include: Ability to open two documents at once, Import Kindwords 2 files, Proximity spell checker and thesaurus, Text flow around graphics. Requires 1Mb Ram

MJC PRICE £32.95

Protext V4.3	£39.95
Pen Pal V1.4	£37.95
Final Copy 2	£69.95
Wordworth - NEW V2	£74.95

## AMIGA EDUCATIONAL

**FUN SCHOOL** - Probably the best selling Educational Software for the Amiga - great sound and graphics and now conforms to the National Curriculum (FS3 & FS4).

### Fun School 2 - 8 programs per pack

Fun School 2	under 6	£6.95
Fun School 2	6 to 8	£6.95
Fun School 2	over 8	£6.95

### Fun School 3 - 6 programs per pack

Fun School 3	under 5	£15.95
Fun School 3	5 to 7	£15.95
Fun School 3	over 7	£15.95

### NEW Fun School 4 - 6 programs per pack

Fun School 4	under 5	£15.95
Fun School 4	5 to 7	£15.95
Fun School 4	7 to 11	£15.95

All Fun School programs will work with a standard 512k Amiga and the new A500 Plus.

### KOSMOS Answerback Junior Quiz

Includes 750 General Knowledge questions & a game reward

£14.95

### Answerback Senior Quiz

As above but for age 12+

£14.95

### Factfiles

Add on question packs for the Answerback Quiz  
Factfile Spelling (6-11) £7.95  
Factfile Arithmetic (6-11) £7.95

### Kosmos

Language tutors with a vocabulary of over 2,500 words & the ability to add your own - up to GCSE level.  
French Mistress £14.95  
German Master £14.95  
Spanish Tutor £14.95  
Italian Tutor £14.95

**KOSMOS MATHS ADVENTURE:** The latest offering from Kosmos covers the National Curriculum maths using a series of four games. There are four difficulty levels and your performance can be kept and printed out. (6-14) £17.95

### LCL SOFTWARE

Primary Maths Course (3-12)	£18.95
Micro Maths (GCSE level)	£18.95
Micro French (GCSE level)	£18.95
Micro English (GCSE level)	£18.95
Reading & Writing Course (3+)	£18.95

### NEW - MEET ADI!

ADI is a friendly alien being that appears on this latest range of educational software from Europress (the manufacturers of the Fun School range). Each package is specifically designed to follow the National Curriculum for a particular school year.

**ENGLISH 11/12:** Features pronouns, verbs, adverbs, spelling, synonyms and prefixes/suffixes. MJC Price £17.95

**ENGLISH 12/13:** Using dictionaries and reference books, construct adverbs, punctuate sentences. MJC Price £17.95

**MATHS 11/12:** Covers geometry, algebra, statistics, symmetry, quadrilaterals and number operations. MJC Price £17.95

Further information on our Educational range is available in our Educational Supplement - on request

**Remember - prices include VAT & delivery**

# C FOR BEGINNERS

## SPEAKING IN TONGUES

Every programmer seems to have his or her favourite programming language, and will defend it to the death. Some will proclaim that Pascal is the only language worth using, others Modula-2 or Ada, and some still insist that BASIC is indeed the Bee's Knees. What would make the arguments amusing (if they weren't so trivial) is that it doesn't really matter what language you use; there is nothing that you can achieve in one language that can't be done in any other.

The computer language C is a case in point. Although it only has a tenth of the number of instructions that say, a typical BASIC has, it is still possible to write a program in both languages and achieve exactly the same goals. The difference will be that the C version will run faster and consume less memory. When it comes to programming the Amiga, C is the language of convenience.

## IN THESE ENLIGHTENED DAYS...

Although these days most new Amiga owners will arrive via a route which has completely by-passed other computer systems in favour of games consoles, there will still be the occasional old fogey like myself who remembers with fondness the C64s, Amstrad CPCs, Spectrums and BBC Micros of this world. All these computers had one thing in common: when you switched them on you immediately had the programming language BASIC at your disposal, whether you wanted it or not.

These days computers don't automatically boot up into a language – instead you are presented with a Graphical User Interface (GUI), such as Workbench, GEM or Windows. These 'front ends' enable the user to run programs simply by clicking on icons with a mouse button – and languages have now been relegated to a place amongst these icons.

Obviously this is incredibly flexible, for we are no longer stuck with one implementation or language. Unfortunately, it also means that a degree of immediacy is lost. To write a computer program you now need to run a text editor and several utility programs before you get anything on-screen.

## C HERE

C is a rather special language, in that it looks like a cross between an Assembly Language and a high-level language such as BASIC or Pascal. It was written in the 1970s by a bloke called Dennis Ritchie, who originally created it to run on a monster of a computer called a DEC PDP-11. C, as you may know, owes a lot to a language called B, which in itself owes a lot to BCPL. C, itself, has been updated to C++, but that's another story...

Some people have described C as a glorified macro-assembler, which is a rather cruel, if not totally inaccurate, description. Like Assembly Language, C has very few commands and those that do exist are executed very quickly when converted into machine code. Some C commands are very closely related to their machine code counterparts, and accessing memory and system resources directly is a lot simpler than with other languages.

Although heavily linked with the UNIX operating system, C became a popular language in its own right, and soon a need to agree on a standardised version arose. These days any new C language implementation worth its salt should be American National Standards Institute (ANSI) approved.

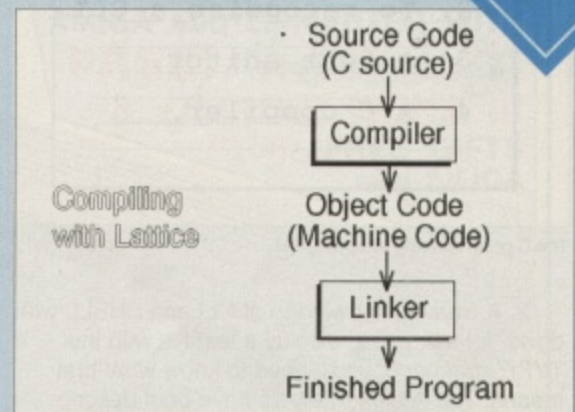

In the same way that BASIC is called an 'interpreted' language, C is called a 'compiled' language, for instead of being translated line by line as needed, a C program is translated completely before it is run. This compilation process can take a good few seconds (or even minutes or hours with larger programs) but only needs to be done once to produce a running program. To introduce some jargon, a C compiler converts a source file (the C program) into an object file (the machine code program). The translated program is almost as fast and as small as a program written specially in Assembly Language, but a lot easier to produce. The C code is also portable – that is, a C program written on a PC stands a good chance of running on an Amiga and vice versa, providing of course that no reference is made to custom hardware.

## THE MISSING LINK

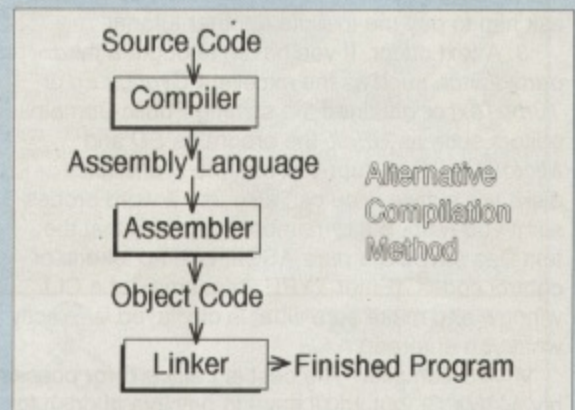

Usually, after the compilation procedure, an additional 'linking' process is required, but we will deal with this problem later. Also, be aware that some C compilers, notably Public Domain systems, will not compile source code directly into machine code. Instead, the source code is converted into an intermediate file of assembly language, which must then be converted into machine code before it can be run. Confused? Check out the diagram.

Writing a C program is normally a matter of entering the C source with a text editor, compiling it, assembling it if necessary, linking it and then running it. Any errors which are spotted are fixed by editing the C source with the text editor, re-compiling it, re-assembling it if necessary, re-linking it, and then re-running it.

This cycle can take a lot of time, even with a small program, so imagine what it must be like to discover an error after waiting 20 minutes for a really big program to run. It's at a time like that when linking is suddenly a very good thing indeed. If, by careful design, you can split your program into several sections, each section can be com-

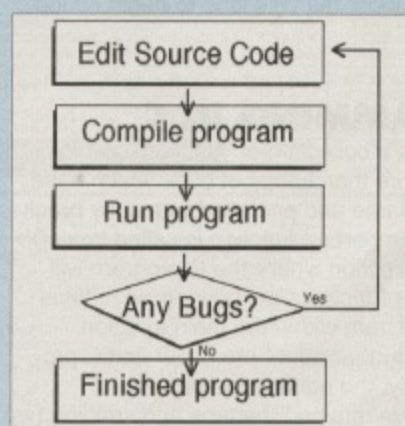

Making a C program with Lattice C.

Making a C program with a different compiler.

iled individually, and therefore much more quickly. Even if the sections share variables, as long as you inform the compiler of them, each section of code can be compiled separately. Finally

The edit, compile, link, run cycle.

the linker program is used (the standard Amiga linker is called *Blink*) to merge all the files together. This technique works so well that even code sections written in

different programming languages can be linked together. So, for example, if your C program needs an extra burst of speed at a critical point, you could link in a specially written assembly language routine to save the day.

## INGREDIENTS

Before you can learn to program in C, you'll need a C compiler. I know that might seem a bit obvious, but there are always people who will patiently type listings into a CLI or SHELL and expect to obtain a running program. They then telephone the office and demand to know why they keep getting errors like 'Unknown command'. So let's get this straight – to write a C program you will need the following:

1. An Amiga (you can't program a Super Nintendo, sorry).

Before you can program in C you will need:

1. An Amiga.
2. To recognise a CLI.
3. A text editor.
4. A C compiler.

The C programming shopping list.

2. A working knowledge of CLI and SHELL windows. If I ask you to display a text file with the TYPE command, you'll need to know what that means. The Amiga manuals have brief descriptions of the commands you'll need, but if you need more help you'll have to telephone the editor and ask him to pay me to write another tutorial.

3. A text editor. If you haven't bought a third party editor, such as the excellent *Cygnus Ed* or *TurboText* or obtained the spiffing Public Domain editors such as *UEdit*, the programs *ED* and *MicroEMACS* as supplied with the Workbench disks will suffice. You can also use a word processor if you wish, but remember to ensure that the text files saved are pure ASCII, with no tokens or control codes. (Enter TYPE <filename> at a CLI window and make sure what is displayed is exactly what you entered.)

4. A C compiler. The best is *Lattice C* (or possibly *MANX C*), but you'll have to pay lots of dosh for it. Runners-up are *DICE*, which is a bargain of a shareware program, or *NorthC*, which is public domain. You'll also need specific Amiga 'include files', which we'll come to in later instalments.

Once you have satisfied all these requirements, we'll have enough words for a story. Are you sitting comfortably? Good, then it's time to begin. Once upon a time...

## PROGRAMMING IN C

A C program is a collection of 'functions', which are nothing more than lumps of code which have been given a name and enclosed with curly brackets. The most important function is called 'main()', for this is the function where the C program will start. Any other functions will be ignored, unless they are called from within the main function.

So without further ado, here is our first C program. Hopefully, the editor and magazine typesetters have retained the tabs and spacing [we do our best – Ed]. C is very understanding when it comes to laying out the code, so you have a lot of choice when it comes to arranging your programs. My advice is to use lots of empty lines, tabs and spaces to make every thing easier to read. There are recognised places to put your brackets, but you soon find your own style. Try to be consistent, even if you are consistently wrong.

The text below is a good program with which to test that your compiler is working. Type it into a text editor, and save it to disk with the name 'example1.c'. The ending '.c' is important to identify the file as C source, not only to yourself, but also to your compiler. To get the compiler working you will have to read the documentation which came with your set-up, but with the *Lattice C* sys-

```
/* Example1.c – the hello word example */

main()
{
    printf("CU Amiga\n");
    printf("The Complete Guide to the Amiga\n");
}

/* End of example1.c */
```

tem you can type 'LC -L example1' and stand back. The *Lattice* compiler will compile it and link the program automatically, producing some files on disk for you. One of these files will be called 'example1', and if you run it – simply by typing 'example1' at the CLI prompt – you will see an exciting message appear on-screen.

Other files called 'example1.o' and 'example1.lnk' will have mysteriously appeared in the same directory. The file ending in '.o' is that object file I was talking about, and the '.lnk' file is a file of instructions created by the *Lattice* system to control the linker program. I don't really want to get into the linking instructions yet, but if your compiler doesn't automatically link your programs for you, you'll need to scour your documentation for example link files to use. The link file produced by the *Lattice* system looks like this:

To link your program manually with *Blink*, you enter the above into a text editor, save it as 'example1.lnk' and type 'blink with example1.lnk' at the CLI prompt. You can see how it takes the object file, 'example1.o', and blends it with the secret herbs and spices in a file called 'c.o', to produce a file called 'example1'. It also makes use of some libraries, where, for example, the 'printf()' function lives. If your program doesn't link properly because it can't find 'printf()', check to see that link file is as above and you have assigned LIB: to point to the correct place.

```
FROM LIB:c.o+"example1.o"
TO "example1"
LIB LIB:lc.lib LIB:amiga.lib
BATCH
```

## THE EXAMPLE PROGRAM

Looking at the example program in a little more detail will be helpful. First of all we come across the two commands '/' and '/'. You might have thought they were simply for decoration, but to C they are very important. The first indicates that a comment is coming – a comment is something for your benefit only; the compiler will ignore it completely. Until the closing comment marker is met '\*/', any intervening text is treated as a comment. Make sure you always use comment markers in pairs, and be careful not to put comments inside comments – that way leads to madness! Thus the text 'Example1.c – the hello word example' is a comment, and is ignored by the compiler.

We next come across the first (and only) function, which has been called main(). The round brackets which come after it are essential, as they tell the compiler that 'main' is a function and not some variable or other. Notice how we use round brackets to enclose parameters in later functions. If we didn't call the function main(), the entire program would be a waste of space, as nothing would

happen. Most compilers will go bananas if there isn't a function called main() somewhere.

The curly brackets that follow are in a pair – they enclose the lines of code which make up the function main. They must be curly brackets (shift [ and ] on UK keyboards), and again they must be in a pair, with a closing bracket following an open bracket.

In between the brackets is the first bit of code which actually does something: two lines which both display text on the screen, using a built-in function called 'printf()'. Like any other C function, printf() has round brackets around any supplied parameters, which in this case take the form of text. Text must be enclosed in double quotation marks (shift-2 on UK keyboards) to mark its start and finish.

You might have thought that my finger slipped and I typed a couple of '\n's by accident, but they are there for a reason. As a piece of homework you should find out what the effect is of leaving them out – or putting more in. Try putting a '\n' in the middle of the second sentence.

The final piece of magic spell is the semi-colon. C is fond of its grammar and expects a semi-colon to separate different lines of code. Because C uses the semi-colon to mark the end of a C statement, and not a new line like some languages, you can stick as many statements on a line as you like (within reason) as long as they are separated by semi-colons.

For example, I could have written the main function as:

```
main()
{
    printf("CU Amiga\n");
    printf("The Complete Guide to the
    Amiga\n");
}
```

But I didn't, because that's too hard to read. Before next month, try out the example listing and make sure that your linker is linking properly. Then you'll be ready for the exciting concept of even more functions! Be seeing you.

## WHY C ON THE AMIGA?

The Amiga's Workbench – and all the programs that make use of it – rely on an operating system which is itself largely written in C.

The Amiga uses a micro-processor designed by Motorola, called the 68000. The 68000 has a large list of possible commands – called its instruction set – which, when put in the correct order and placed in memory, form programs. These machine code programs are the 'lowest level' that the Amiga can understand.

When you write a program in Assembly Language using an assembler package such as *DevPac*, you are creating a machine code program directly. You therefore have complete access to the instruction set and registers (which are the 'variables' of the machine code language) but must take care that no mistakes are made. Coding in Assembly Language produces the fastest possible programs, but also allows the smallest mistake to result in a system crash ('guru'). The instruction set of the 68000 is very simple, and most programming time is spent writing many lines of code which could have been created with a single statement in a higher level language.

## NEXT MONTH

JOHN KENNEDY CONTINUES HIS C TUTORIAL WITH A DETAILED GUIDE TO WRITING YOUR OWN ADDITIONS TO THE LANGUAGE USING FUNCTIONS.

**Mat Broomfield returns to catch another innings worth of questions from the outfield.**

## WORDSWORTH FONT DESIGN

I own an A500 Plus and a Canon bubble jet printer which I use with *Wordworth*. I would like to use a lot more fonts than I do at the moment but the only way that I can achieve decent WYSIWYG output is by setting

*Wordworth's* Ultraprint feature to Super, which loads in and prints bit-mapped fonts four times larger than the ones on the screen, reducing them to 25% of their size to reduce the 'jaggies'. The problem is that my collection of fonts contains very few with exact multiplications of 400%, thus rendering most of them useless.

I've tried reducing and enlarging bit-mapped fonts using the *Fountain* program on the Workbench disk, but to no avail. For some reason the program goes down the drain every time I try to get it to work.

Is there a font designer out there somewhere, because I can't find one? I'm looking for something that will allow me to re-scale bit-mapped fonts and perhaps create a few of my own. Surely that's not too much to ask?

If such a package exists as PD, then all the better. Incidentally, what's wrong with *Fountain*?  
Paul Ryde, Ipswich, Suffolk

I'll answer your last question first because that will solve all of your problems. *Fountain* is not designed for re-scaling bit-mapped fonts; it's for converting Compugraphic fonts (also known as Intellifonts) into a format that the Amiga can use. In case you're not aware, Compugraphic fonts are the scalable typefaces usually associated with desk-top publishing programs such as *Professional Page*. Because the fonts are stored as mathematical descriptions of their shapes, rather than as bit-mapped images, they can be completely re-sized without any decrease in quality. Workbench 2 is supplied with three of these fonts (Times, Letter Gothic and Univers Medium), and you can buy thousands of them from PD companies.

*Fountain* can also be used to create high-quality bit-mapped fonts in any size provided you have a Compugraphic typeface available to convert them.

The good news is that *Wordworth* supports

scalable typefaces in the first place, so you won't need to bother creating bit-mapped versions. If you are using *Wordworth 1.0*, you should register with Digita immediately to receive your updated program (version 1.1).

Once you've converted a Compugraphic font via *Fountain*, it will appear in the normal font list when you select *Wordworth's* Typeface option. Having selected the font, you can then type in ANY size, and it will be scaled perfectly. When the font is printed, it will appear at the maximum resolution of your printer, with no jagged edges at all.

For people who don't own a 2.0 Amiga, you'll have to resort to creating multiple bit-map fonts. *Calligrapher* should be available from most 'serious' software shops for about £75. Alternatively, you can try getting to grips with *FED*, the font editor supplied with most 1.2/1.3 versions of Workbench.

## PC EMULATOR

Most of my friends own PCs and I would like to know what I need and how much it will cost to make my Amiga 500 Plus PC compatible?  
Peter Stevens, Lichfield, Staffs

There are currently four PC emulators available for the A500: the GVP PC286, the KCS Powerboard, the AT-Once and the AT-Once Plus. All four emulate a 286 PC, although the AT-Once Plus and the PC286 use 16-bit processors running at 16MHz, and are the fastest of the four. Having said that, the AT-Once Plus has been criticised for being somewhat unreliable. The standard AT-Once (dubbed the 'Classic') is the cheapest of the four at only £139, although the PC286 is about to see a major decrease from its current £249 price tag.

The PC286 is designed solely to fit into a GVP A530 or Series 2 hard drive, so if you don't own one of these, it's no good to you.

So, that leaves the KCS Powerboard, certainly the most user-friendly of the boards, because it simply plugs into the RAM expansion port under your Amiga. Although it is capable of emulating CGA and VGA screen modes, in VGA there is some degradation as the Amiga is not capable of outputting the 256 colours in high resolution that VGA requires.

As you would expect, the boards all come with software, and all are capable of running Windows 2 and 3. The Powerboard is a little slow when it comes to running software, but if you have an accelerator it will take advantage of the fact.

If you own a GVP drive, the PC286 is certainly your best bet. If not, the KCS Powerboard seems to have the edge in terms of ease of use and reliability.

## DELUXE MUSIC SCORES

I'm looking for a good quality printer for printing my *Deluxe Music Construction Set* scores. I was told that ink jet printers offer very good printing quality, however all I can afford is £160, and the only one that

I can find in that price bracket is the Commodore MPS-1270.

Is this any good for what I need, or is there a better choice that you would recommend for use with *Deluxe Music*?

Do you know if Electronic Arts have any plans

to release a new version of *Deluxe Music*? The one I'm using now is version Beta 4.  
Fahad Al Kindy, Seeb, Oman

I'm not familiar with the Commodore MPS-1270, but providing it has a resolution of at least 180 dots per inch I see no reason why it shouldn't give reasonable quality.

I used to print *Deluxe Music* scores on my old Epson compatible 9-pin Mannesman Tally, and they came out fine. When I upgraded to a Canon BJ-10, the program wouldn't print properly anymore, and kept performing form feeds at the end of every stave. I've never found out why this happens, but a number of other people using different printers also report the same problem. Perhaps it might be wise to try the printer before you buy it, or at least try to buy an Epson compatible machine.

Another way of printing scores using any printer, is to use a dedicated program such as *Copyist*, a professional notation printing program that can load MIDI files and convert them into scores.

Unfortunately, at £100 for the amateur version, and £250 for the professional one, it's probably way outside your price range.

Many MIDI packages such as *Dr T's KCS*, *Bars 'n' Pipes* and *Rave* can also print full scores. At £70, *Rave* may be a good solution for you... and it plays sound samples too.

As for future upgrades to *Deluxe Music*, I asked Electronic Arts this same question, and although nothing is planned, they said that they might reconsider if they received enough requests for a follow-up. Mind you, judging by your version number, I can't help wondering whether you actually bought your copy in the first place...

## INTRO MAKER ON THE A500+

Is there an *Intromaker* that runs on the A500 Plus?  
Peter Stevens, Lichfield, Staffs

I don't know if you're referring to a specific program called

*Intromaker*, or merely a generic utility for creating boot blocks or menus. 17-Bit software sell a pair of disks titled *The Ultimate Boot Block Collection*, which contain dozens of boot and menu selector programs. I can't guarantee that any of them are Plus compatible, but this is the largest collection of Intro programs available so it's worth a try. Phone them on 0924 366982, and ask for disk numbers 1655 and 1656.

## OFFENSIVE PROGRAM

I've been given an auto-booting games disk that contains a number of offensive words in its intro. Is it possible for me to remove these words from the program?  
L.G. Ottaway, Upper Hutt, New Zealand

It's a dead cert that the offending words can be removed, the question is whether you are capable of doing so. No, I'm not being sarcastic, but it may be that the level of knowledge required to clean up your program is beyond your capabilities.

If they are simply inserted as an Echo statement in the start-up sequence, you can simply load it into *Ed* or a similar text editor and remove the entire statement. However, if they

have been hard-coded into the program's executable code, you would probably need to disassemble it to get at the text. If you're certain that this is the case, and you're handy with *Devpac*, perhaps you might care to attempt it (on a backup copy of course!).

Provided the disks are in DOS format, and the intro doesn't contain instructions that boot the game, you could always try simply copying the game files (and any associated data) to a blank disk and writing your own startup-sequence.

## MODULATOR MOAN

I must complain about the design of the A500's TV modulator. Why couldn't Commodore put feet on it which are long enough to reach the desk top? Mine certainly doesn't, the result of which is that it is going

faulty already.

Peter Stevens, Lichfield, Staffs

I agree that the design of the TV modulator is not the best thing in the world. A lot of people accidentally damage them when they lean their computer back to get at the RAM expansion slot. I know that there is a company that manufactures extension cables for the modulator so that you can position it wherever you like (within reason of course!). Unfortunately, I can't remember where I saw the cable advertised, but you could always give Videk a ring on 081 204 6690. They seem to make cables for just about everything else.

Alternatively, you could always wedge a bit of card under your modulator...

## MORE SOUND CHANNELS

My greatest hobby is using the Amiga to create music, but I've started to realise that four sound channels aren't enough. It seems that the only computers with eight channel sound are 32-Bit machines

that cost over £500, and none of them are Amigas.

Is it possible to link two Amigas together, and run a program such as *OctaMED* on each one, so that the two machines act as one big computer with eight channel sound?

I think that the answer may be to link both computers to my Hi-Fi using leads from Tandy and synchronising the start of each song somehow, but I don't know how to get both computers to start simultaneously. I can get hold of a second-hand Amiga for about £200, so please help me before I get desperate and spend hundreds of pounds on a different computer!

Peter Rimmer, Fallowfield, Manchester

I never cease to be amazed at some of the letters that I receive. Some are funny, some are boring, but it's imagination and ingenuity such as yours that really make my day. What a brilliant idea!

It is possible to link two Amigas together, although I'd never considered doing it for musical purposes before.

It may be that you could do something using the serial port and a null modem cable (such as the type used for data-link games), but I don't have a clue how you could use that to synchronise the two machines.

Another more likely prospect, is that you could buy two MIDI interfaces, and set one

Amiga up as a 'slave' to the other, thus allowing easy synchronisation of songs, etc. I'm not certain how you would give the slave a MIDI ID number, which you would presumably require in order for it to accept MIDI commands from the controlling computer. I suggest that you get hold of a copy of *The MIDI Handbook* to learn more about this subject from your local bookshop.

Mind you, *OctaMED* does let you use eight track sound anyway. Just click the number '8' on the Play options screen (it's beside the word 'STOP'). Then go into the Block menu and click '8' at the top of its screen so that you can see all eight tracks at once. I must warn you, there is quite a severe drop in sample quality when working with eight tracks.

Another alternative is to buy a MIDI instrument. For less than the price of your second-hand Amiga, you can buy a cheap and cheerful mini-keyboard that lets you play 16 voices at a time, in addition to the four sample channels that the Amiga can output.

If you don't need a keyboard, but you do have a bit more money, you might like to consider the Roland Sound Canvas, a superb synth module that uses up to 16 instruments at a time to play a maximum of 24 notes simultaneously. With a choice of 127 different performance quality instruments (many of which have several variations), ten drum kits and a range of weird and wonderful sound effects, it's worth every penny of its £450 cost.

## FLOPPY DRIVE DISASTERS

I have had my A600 for about six months now and according to all the literature I've read, it's possible to run more than one external floppy drive from a bog-standard 1Mb machine. I've spent lots of money on

two floppy drives only to find that they won't work when daisy chained to the Amiga.

It's not enough merely to switch DF2: off either, I have to physically disconnect it from DF1. Either drive works fine as DF1: provided DF2: is not connected at the same time.

The only thing that they do when chained together is read. If I try to write to a disk I almost always get a checksum error 880, then the disk goes NDOS.

The internal drive works fine with any configuration by the way. Do I have a faulty machine, or have we all been misled?

Ray James, Ammanford, Dyfed

No, you haven't been misled. In fact, it's possible to add at least three external drives to the Amiga, but there is a catch; any more than one external, and you'll have to use drives that have their own power supplies. The Amiga power supply is simply not up to the task. In fact, it wouldn't surprise me if your computer crashes when you have both drives connected, especially if you have extra RAM too.

What usually happens, is that your Amiga appears to work fine for half an hour to an hour, but after that it simply gives up, and won't work again until your power supply has cooled down.

It's possible to buy special low power consumption drives to get around this problem, you might try the Roctec drives from Evesham micros. Alternatively Power Computing sell a double drive for about £100. Phone Evesham on 0386 765500. Power can be found on 0234 843388.

Another alternative would be to buy a higher powered supply, and there are a number of these available too. Try Power Computing on the number given previously.

## ADVENTURE WRITER

Being a massive fan of the *Monkey Island* games, I have the urge to create an adventure game of that type for myself.

I've searched through all of my computer magazines and one package that sounds appropriate is *Visionary*, an adventure game creator. I've heard that the software is better suited to *Eye of the Beholder* type of adventure games.

What do you think? Are there any other similar packages around, or would *Visionary* be ideal for my purposes?

Steve Thomas, Beddau, Mid Glamorgan

As far as I'm concerned, *Visionary* is the bee's knees, but I don't really think that it's suitable for what you want. The package is absolutely perfect for creating text (type-in) and text with graphic adventures, and as you correctly mentioned it can also handle *Eye of the Beholder*-type games (although personally, I don't feel that this is the program's greatest strength).

To be honest, I've never heard of a program to create the type of game you're interested in. Electronic Arts publish the *Adventure Construction Kit* with which you can create *Ultima*-style games, and there are a couple of PD and licenceware offerings for creating text adventures. Check with your local PD library.

## A600 D-PAINT

I am planning to buy a hard drive, but after seeing the arrival of the A600HD I was considering selling my A500 and buying that instead. This would work out much cheaper than buying a separate hard drive.

Do you think that I should do this, because the only thing I use the keypad for is the Perspective feature of *D-Paint*?

Tom Campbell, Selby, N. Yorks

This would seem to be one viable solution to your situation, but there are two things that you should also consider:

1. The greatest mistake that most people make when buying a hard drive, is to buy one that is too small for them. Twenty or even fifty megs may seem like a lot of storage capacity compared to what you're used to, until you consider a game such as *Monkey Island 2*, which occupies something like 12 Mbs on its own! Just because you can't think of much to put on a hard drive now, you'd be amazed at how many ideas you have once you purchase the drive!

2. At some future time are you likely to require the expansion facilities that your A500 offers you? Of course, the A600 has the PCMCIA slot which has a great deal of potential, but at the moment there's nowhere near the variety of peripherals available for it that the A500 has.

Provided neither of these factors have changed your mind, then go ahead and sell your 500 and buy a 600. It has a 2.0 operating system, and is a great deal more reliable than the 500.

# NEW AMIGA ACTION REPLAY MK III

STILL ONLY  
**£59.99**

AMIGA A500/500+  
FOR 1500/2000 VERSION £69.99

## THE WORLDS MOST POWERFUL FREEZER-UTILITY CARTRIDGE

### JUST LOOK AT THE UNMATCHED RANGE OF FEATURES

**SAVE THE ENTIRE PROGRAM IN MEMORY TO DISK**  
Special compacting techniques enable up to 3 programs to fit on one disk. Now saves directly to disk as Amiga Dos - reloads independently of the cartridge - even transfer to hard drive! Works with up to 2 Megs of Ram - even 1 Meg Chip Mem (Patter Agnus).

**SUPER POWERFUL TRAINER MODE**  
now with DEEP trainer. Even better than before - allows you to generate more or even infinite lives, fuel, ammo. Perfect as a Trainer Mode to get you past that "impossible" level. Easy to use.

**IMPROVED SPRITE EDITOR**  
The full Sprite Editor allows you to view/modify the whole sprite set including any "attached" sprites. PLUS A RANGE OF IMPROVED FEATURES.

**VIRUS DETECTION**  
Comprehensive virus detection and removal features to protect your software investment. Works with all presently known viruses.

**BURST NIBBLER**  
Now this super disk copier program is built into Action Replay Mk III. Just imagine a superfast, efficient disk copier program at the press of a key - no more waiting.

**SAVE PICTURES AND MUSIC TO DISK**  
Pictures and sound samples can be saved to disk. Files are saved directly in IFF format suitable for use with all the major graphic and music packages. Samples are displayed as screen waveform.

**PAL or NTSC MODES SELECTABLE**  
Useful for removing ugly borders when using NTSC software. (Works only with newer Agnus chips).

**SLOW MOTION MODE**  
Now you can slow down the action to your own pace. Easily adjustable from full speed to 20% speed. Ideal to help you through the tricky parts!

**MANY MORE INSTANT CLI COMMANDS**  
like Rename, Relabel, Copy, etc.

**RESTART THE PROGRAM**  
Simply press a key and the program will continue where you left off.

**FULL STATUS REPORTING**  
At the press of a key now you can view the Machine Status, including Fast Ram, Chip Ram, RamDisk, Drive Status, etc.

**POWERFUL PICTURE EDITOR**  
Now you can manipulate and search for screens throughout memory. Over 50 commands to edit the picture plus unique on screen status "overlay" shows all the information you could ever need to work on screens. No other product comes close to offering such dynamic screen handling of frozen programs!!

**JOYSTICK HANDLER**  
allows the user to select Joystick instead of Keypresses - very useful for many keyboard programs.

**MUSIC SOUND TRACKER**  
With Sound Tracker you can find the complete music in programs, demos, etc. and save them to disk. Saves in format suitable for most track player programs. Works with loads of programs!!

**AUTOFIRE MANAGER**  
From the Action Replay III preference screen you can now set up autofire from 0 to 100%. Just imagine continuous fire power? Joystick 1 and 2 are set separately for that extra advantage!

**IMPROVED RAM EXPANSION SUPPORT**  
Now many more external Ram Expansions will work with all Action Replay III commands.

**DISKCODER**  
With the new "Diskcoder" option you can now "tag" your disks with a unique code that will prevent the disk from being loaded by anyone else. "Tagged" disks will only reload when you enter the code. Very useful for security.

**SET MAP**  
allows you to Load/Save/Edit a Keypad.

**PREFERENCES**  
Action Replay III now has screen colour preferences with menu setup. Customise your screens to suit your taste. Very simple to use.

**DISK MONITOR**  
Invaluable disk monitor - displays disk information in easy to understand format. Full modify/save options.

**IMPROVED PRINTER SUPPORT**  
including compressed/small character command.

**DOS COMMANDS**  
Now you have a selection of DOS commands available at all times - DIR, FORMAT, COPY, DEVICE, etc.

**FILE REQUESTOR**  
If you enter a command without a filename, then a file requestor is displayed.

**DISK COPY**  
Disk Copy at the press of a button - faster than Dos Copy. No need to load Workbench - available at all times.

**PLUS IMPROVED DEBUGGER COMMANDS**  
including Mem Watch Points and Trace.

**BOOT SELECTOR**  
Either DF0 or DF1 can be selected as the boot drive when working with Amiga Dos disks. Very useful to be able to boot from your external drive.

### PLUS A MACHINE CODE FREEZER MONITOR WITH EVEN MORE POWER!!

**EVEN MORE FEATURES INCLUDING 80 COLUMN DISPLAY AND 2 WAY SCROLLING:-**

- Full M68000 Assembler/Disassembler
- Full screen editor
- Load/Save block
- Write String to memory
- Jump to specific address
- Show Ram as text
- Show frozen picture
- Play resident sample
- Show and edit all CPU registers and flag
- Calculator
- Help command
- Full search feature
- Unique Custom Chip Editor allows you to see and modify all chip registers - even write only registers
- Notepad
- Disk handling - show actual track, Disk Sync, pattern etc.
- Dynamic Breakpoint handling
- Show memory as HEX, ASCII, Assembler, Decimal
- Copper Assemble/Disassemble - now with suffix names

**REMEMBER AT ALL TIMES YOU ARE INTERROGATING THE PROGRAM IN ITS "FROZEN" STATE WITH ALL MEMORY AND REGISTERS INTACT - INVALUABLE FOR THE DE-BUGGER OR JUST THE INQUISITIVE!**

#### WARNING 1988 COPYRIGHT ACT WARNING

## PRINTER CABLE

I have acquired an ICL Microline 84 printer and I would like to make up a cable to connect it to my Amiga. Could you please let me know what pins on the printer are connected to what numbers on the Amiga?

R. Doxey, Brimington, Derbyshire

Why re-invent the wheel? There are loads of perfectly adequate cables already available for just about every printer under the sun, and most of them only cost between £10 and £15 each anyway.

Chances are, your printer uses either a serial or parallel cable (parallel is more popular). If this is the case, any standard PC printer cable will do, and you can buy these from Dixons or Tandy.

Incidentally, you can find schematics to the printer ports in the appendices at the back of the manuals that came with your Amiga.

## SETKEY STUNNER

I have a problem with *Setkey*. I know how to create standard redefined keymaps, but I want to use a menu picture to display the key choices, i.e. F1, F2, F3 etc.

When I press F1, the utility loads up fine, and when I quit the utility it returns to the title screen. The problem is, none of the other utilities load up after that, in fact nothing happens at all. I end up having to soft reset my Amiga.

Is there something that I'm supposed to type in after the name of the utility when setting up a *Setkey* file so that the whole disk reloads when I quit out of each utility? If so, do you know what the command is, because I've tried everything I can think of without success.

Ian, Plymouth

Here's a useful tip when you're creating a keymap with *Setkey* – instead of defining the function keys to load a particular program, get them to execute a script file. For example, the definition for F1 might read `Execute DF1:key1`. Key1 should then be a standard ASCII text file containing the commands you want to execute.

Doing it this way has two advantages: firstly, the program commands are easier to edit from a text file than they are from *Setkey*. Secondly, you don't need to redefine a new keymap each time you create a different compilation disk; just change the contents of your text files.

So, back to your problem. It could be that the program that you load activates a different keymap to the one you've defined. Therefore, when you quit out of it, the function keys no longer do what you programmed them to.

The easy solution to this is simply to reset your keymap after you've exited the program. You can usually do this with the same file that you used to load the program with. For example, take the following text file:

```
picend titlepic
runmyutility
picload titlepic
setmap mykeymap
```

The first line is used to cancel the menu screen, assuming you're using *Picshow* to display it in the first place. This guarantees that there are no program conflicts between

*Picshow* and the utility you're loading. The second line loads the utility. Most utilities will pause execution of the remaining CLI commands until they have been exited. The next two lines will only be executed when the utility ceases to run. The third line re-displays your menu screen, and the fourth re-activates your keymap.

Unfortunately, this solution won't always be enough to solve your problems, but I'm afraid only experience will help you there. There are just too many permutations to offer every conceivable solution.

If you've been buying CU for a while, it's worth taking a look at some of the cover disks between about June and December of 1991 because they used *Setkey* in a variety of ways, and it may help if you take a close look at a few of them.

## UNEXPECTED EXCEPTION

Reading your answer to Ben Ritchie's question about the start-up screen's colours, you said that you didn't know what it meant when the screen turned yellow. According to you, this represents something

called an 'Unexpected Exception'. In my amateur view, this means exactly what it says!

I switched my computer on and was shocked to be greeted by the yellow screen. After 15 frantic minutes, I realised that I'd forgotten to turn on the power supply to my A590 hard drive. When I turned it on, everything worked perfectly.

I presume therefore, that a yellow screen means that the computer is in some way being affected by external equipment. To the computer this represents a very unexpected exception!

As I could be completely wrong in my assumption, I'd appreciate it if you would find out the correct meaning in case it ever happens again.

Noel Lynch, BFPO 34

Good try Noel, so far as I know, you could well be right! However 'Unexpected Exception' could just as easily have something to do with the power supply, the DMA chip or anything else, so your theory doesn't really bring us much closer to an exact answer does it?

As for finding out the correct answer, it was Commodore's UK technical support line who told me about the unexpected exception in the first place. They also told me that they didn't have a clue what it meant. Impressive, eh!

## SECOND SETKEY

After struggling for ages, I finally worked out how to create and save a keymap with *Setkey*. I stored the keymap in the Devs directory and edited the start-up sequence so that it reads:

```
Setmap gb
DF0:C/PPshow DF0:C/Menu
```

This loads the menu up, but the keys are not working properly. I feel like smashing the computer to bits! Can you help?

Alan Welshman, Southmead, Bristol

Sure, give me your address and I'll pop round with a hammer... Oh, can I help with your *Setkey* problem? Well, I can certainly try.

I seem to vaguely remember something about replacement gb keymaps not overwriting the old ones in RAM, and this might be the

cause of your problems. In the first place, it's not a good idea to save a redefined keymap under the name 'gb' as this can cause you or other people more confusion later. Nor can you simply rename the keymap from CLI. If I remember correctly, the file name is in some way encoded into the data, and renaming it just makes things worse.

Start by creating or modifying a keymap using *Setkey*, then save it with a unique name such as 'Mymap1' or something like that. Now check your start-up sequence to ensure that there are no other Setmap commands in there. If there are, delete them. Add a line such as 'Setmap mymap1', then save the start-up sequence. Reset your computer and load the new disk and everything should work okay. Incidentally, the example disk you sent me didn't contain any keymaps, and didn't have the setmap command in your start-up sequence! Oh, and the Setmap command is meant to be in the C directory (although the root directory will do, you can end up with a huge root directory if you keep doing this).

## AMOS OUTPUT

I recently purchased AMOS but I have one problem: there is no mention of how to obtain a listing or screen dump of my programs via the printer – any ideas?

Keith Robertson, Edinburgh, Scotland

You can print all or part of an AMOS program with the LLIST command, but printing screens is more complicated. There are two ways of performing screen dumps, and both will need an extra program which you can buy. The CLI screendump routine is accessed as an AMOS Procedure, and is easier to use, but it also requires more memory. You can buy it from Deja Vu Licenceware. Give them a call on 0942 495261. The second method is by using the Screendump Extension which actually adds a new AMOS command ('=Dump') to your arsenal. This is by far the more powerful of the two commands, as it allows you to change the way that screens are actually printed. It's available from the AMOS PD library on 0792 588156. Incidentally, the =Dump command originally required a screen number parameter after it, but it has since been rewritten by Francois Linnet and no longer requires it.

## GAMES IDEAS

I have a few ideas that I think would make good games. How do I contact someone to sell the ideas or get them made into games?

Adam S. Griffiths, Newport, Gwent

I would imagine the simplest thing is to approach software developers with your ideas, although they'll need to be well thought out. I know Codemasters will always examine any proposals sent to them, and I'm sure that many other companies would too. Don't forget to protect your copyrights before you send anything. The cheapest way of doing this is to send yourself a copy of your ideas by registered post (in a sealed envelope), then don't open the envelope under any circumstances.

You could try advertising for programmers in the small ads at the back of CU. Better yet, learn to program and write the games yourself!

## PRINTER DRIVERS

Having seen your recent printer special I have produced a disk containing drivers for most popular printers which I will be distributing through my PD library. The disk costs £1.25 including postage and packing, and all orders are usually despatched within 24 hours. Any of your readers who are interested can obtain the disk by sending a cheque payable to M.J. Boyden at ComputerBug PD, 4 Ploverly, Werrington, Peterborough, PE4 6HZ. Tel: 0733 578728.

Matthew Boyden, Peterborough

Well, there's nothing like a bit of free enterprise to get the old economy moving. Matthew enclosed a list detailing the 58 drivers included on the disk. There are many standard ones such as the EpsonX and HP Laserjet, as well as a selection of less common ones such as the Canon 48.020, Postscript and Directions.text (Proprinter). I suggest you call to see if he can help before you send your money off.

## UN SOUND SAMPLERS

A couple of weeks ago I purchased the *Technosound* sampler, and I found that I could not get any sound through it. I have to turn the sound on my Hi-Fi on full blast to be able to hear anything, and even then it's very faint and crackly. I tried a different sampler and found that it was the same, so I've come to the conclusion that it must be my computer.

I haven't had any problems running any programs, etc. but I did notice that my Workbench screen shows '837764 graphics mem, 0 other mem' but in the manual's screen shot it shows '920376 graphics mem, 912952 other mem'. I've also noticed that I can't load the demo animations supplied with *D-Paint III*, even using the player utility. I simply receive a message saying 'Not enough memory'. Have I blown a chip somewhere?

M. Barkthorpe, Woodloes Park, Warwick

I would say that you've almost certainly blown a chip in at least two places, your samplers! If not, then you're very lucky indeed.

The absolute worst thing that you can do to a relatively cheap sampler, is to pump too much volume through it. They're like speakers, they have a maximum limit, and it's not very high at all. A sampler's integrated circuit is designed to handle about 5 volts, and many Hi-Fi's are capable of outputting 40 volts, so you can see the danger.

The safest thing is to start with a volume of zero, then gradually turn it up until the level is right. Don't rely on the volume level coming out of your computer either - use the waveform display to gauge how high the signal level is. If the waveform exceeds the height of its window, then the volume is probably too high.

Assuming you haven't damaged the samplers, a number of questions spring to mind. Are you using the correct cables (stereo or mono)? Are you using the right software? Have you specified the right type of sampler in your software? Have you tried using the 'Monitor input' option of your software to check the sound input before you try and sample it? Does your Hi-Fi output an amplified signal, or does it need to be amplified externally?

These are all questions that you should answer before giving up. If after all that, you

still think that your computer is faulty, try the samplers on a friend's computer, or on one in the shop where you bought them from if possible. If the samplers work, then you know the problem lies with your computer.

The amount of free memory makes no difference to your ability to monitor a sample, and even with only half a meg you should be able to record at least a short sample.

I think it's quite unusual to damage the parallel port (where the samplers are plugged in), but it's always a possibility. If all else fails, perhaps you should get your computer looked at by somebody?

Incidentally, the amount of free mem shown in the Amiga manual is merely an illustration, and is not to be used as a direct comparison with your own computer. Obviously the computer that they used had a 1Mb fast RAM upgrade, that's all.

## CRUMMY CPU

I have a 1.3 Amiga with an A501 memory upgrade and a Cumana external disk drive. Every 10 months or so my CPU calls it a day. I know it's the CPU because the repairman says so. He replaces it, says 'I don't know what caused it, but it should be OK now', and sends me a £37 bill and a three month guarantee. All is well for another couple of months, then it starts to die. The Workbench icon looks like a Picasso and nothing will load.

I've made no modification to my computer, but I was wondering if my add-ons could be contributing to its demise in some way? The extra drive is fine, but the clock battery in the 501 is dead. Also, I can't get the Speech to work properly; regardless of what I type, the voice remains the same.

Phillip Ellis, Flockton, W.Yorks

Your drive and RAM upgrade shouldn't be affecting your computer at all, after all, it was designed to cater for them. The trouble with this sort of gradual problem is that there could be so many factors contributing to the failure of your CPU, it's very difficult to pin down to one definite cause. In the first place I would think about changing your repairman. The one you're using may well be perfectly competent, but he doesn't seem to be much help in the long term.

I can't help wondering if there's some sort of problem with your power supply, either the transformer unit, or your mains supply. It may be worth getting a filter plug which will cut out any power spikes that might be harming your computer. I used to have a very 'dirty' power supply and my computers used to blow regularly. If you suspect that your household supply is at fault (especially if other household appliances seem to have an unnecessarily short lifespan) you can ask the electricity board to run a check on it for you. They'll come round and attach a recorder to your electric supply to check for any problems. The recorder will operate for anything from a week to a month, after which time they can decide whether any action needs to be taken.

## ELECTRON GAMES

I have an Acorn Electron and over the years I've collected a large number of text adventures on tape.

Is there any way that I can use these games on my Amiga with the

BBC Emulator either by putting them on disk or by plugging a cassette player into my Amiga?

J Grant, Stanmore, Middlesex

I think that the BBC Emulator only allows you to use programs written in Basic. If I remember correctly, there was an accessory that allowed you to connect a BBC disk drive to the Amiga but there is certainly nothing available to connect an Electron tape player.

If the adventures are in Basic you could always print out the program listings and retype them manually...

## SONG SAMPLING

I purchased *Mega-Mix Master* and after several attempts at trying to sample a whole song I discovered that I needed more memory. I have 1Mb at the moment: how many megs would I need to sample a five

minute song and how much would it cost?

James Pegg, Leicester

The amount of memory required for sampling depends on the rate at which you record a sample. Lower rates enable you to sample for much longer but the quality of the samples will be lower as a result. With 2Mbs of RAM there is no reason why you can't record a full five minute track at a suitably low rate.

Another alternative would be to sample straight to disk, and this is especially effective if you own a hard drive. In such circumstances it is possible to record an entire album's worth of music in one go!

Some samplers only allow you to record samples using chip mem, and if this is the case with *Mega-Mix Master* then you may find that you have to upgrade the size of your chip RAM before you can record a full song.

## HAM CONVERSION

How do I go about transferring HAM pictures for use in *Deluxe Paint III*? I've tried using V-ILBM, but this simply produced an un-editable picture. When I tried to load a picture I received a mes-

sage 'Sorry can't load HAM pictures'.

I believe that I need to alter the start-up sequence or similar.

W. Vougelesang, Dunoon, Scotland

It is not possible to load HAM pictures directly into *D-Paint III* because it can only handle normal and half-brite modes. You can convert HAM screens down to 64 colour mode if you need to. A program such as *Pixmate* is ideal, although I believe there are even some public domain programs available which will do the job (HAM-Lab seems to ring a bell). You will lose some colour definition in the conversion simply because HAM mode uses up to 4096 colours at once.

## ANY QUESTIONS?

If you have any questions that you need answering drop me a line. As long as it isn't a games query (send it to Play to Win) I'll do my best to get an answer for you as soon as possible.

The address is, as ever: Mat Broomfield, Q&A, CU Amiga, Priory Court, 30-32 Farringdon Lane, London, EC1R 3AU.

## SILICA SYSTEMS OFFER YOU

- **FREE OVERNIGHT DELIVERY:** On all hardware orders shipped in the UK mainland.
- **TECHNICAL SUPPORT HELPLINE:** Team of technical experts at your service.
- **PRICE MATCH:** We normally match competitors on a "Same product - Same price" basis.
- **ESTABLISHED 14 YEARS:** Proven track record in professional computer sales.
- **£12 MILLION TURNOVER (with 60 staff):** Solid, reliable and profitable.
- **BUSINESS + EDUCATION + GOVERNMENT:** Volume discounts available 081-308 0888.
- **SHOWROOMS:** Demonstration and training facilities at our London & Sidcup branches.
- **THE FULL STOCK RANGE:** All of your requirements from one supplier.
- **FREE CATALOGUES:** Will be mailed to you with offers + software and peripheral details.
- **PAYMENT:** Major credit cards, cash, cheque or monthly terms.

Before you decide when to buy your new printer, we suggest you think very carefully about WHERE you buy it. Consider what it will be like a few months after you have made your purchase, when you may require additional peripherals and accessories, or help and advice with your new purchase. And, will the company you buy from contact you with details of new products? At Silica Systems, we ensure that you will have nothing to worry about. We have been established for almost 14 years and, with our unrivalled experience and expertise, we can now claim to meet our customers' requirements with an understanding which is second to none. But don't just take our word for it. Complete and return the coupon now for our latest FREE literature and begin to experience the "Silica Systems Service".

## OCTAMED SPECIAL

Since we gave you *OctaMED Professional* on our July cover disk, the phones have really been buzzing. A number of you wanted more information, so we're devoting a page to your queries. I must thank Teijo Kinnunen, *OctaMED's* programmer, for his help with some answers.

### HARD DRIVE INSTALLATION

After copying *OctaMED Pro* to my hard disk, my computer kept saying 'Can't open OctaMED.gfx1' when I tried to load it. There are no files of this name on the cover disk so what's happening, and how do I install the program properly (if it can be installed at all)?

Grijeten Uit, Vlissingen, Holland

*OctaMED* can be installed on a hard drive, and it works wonderfully. To install it you need to make an *OctaMED* directory and copy the following files to it from the root directory of the CU cover disk:

CUAMIGA.gfx1  
CUAMIGA.gfx2  
CUAMIGA.gfx3  
CUAMIGA.gfx4  
CUAMIGA.gfx7  
OctaMED  
OctaMED.info

You should also copy *MED\_paths* to the S directory of your hard drive. Finally, open the libs directory of the cover disk and copy the following files to the libs directory on your hard drive:

medplayer.library  
Octaplayer.library  
Powerpacker.library (if it isn't already on your drive).

That's all there is to it, have fun!

### MIDI FORMAT

Can you please explain how to load MIDI files into *OctaMED* so that I can replay them through my Yamaha PSR38? I have a number of AM/FM disks that contain various MIDI files which I can load into *Sequencer 1*, but I don't seem to be able to load them.

Mike Hemming, Studley, Warwickshire

Although *OctaMED* can output tunes via your MIDI keyboard, it is not able to load 'standard' MIDI files, to the best of my knowledge. In fact there are several different MIDI standards on the Amiga anyway. *Music X* has yet a different music format, although using the program *AMFC* (from Amiganuts) you can convert *OctaMED* songs to *Music X* format.

### SAMPLE MEMORY

When I try to use a lot of samples with *OctaMED*, I frequently run out of memory. Is it possible to increase the memory, into which samples are loaded, using an 8Mb expansion?

Neil Frazer, Farringdon, Sunderland

I believe *OctaMED* restricts the size of any single sample to 131072 bytes (about 130k), but there's no reason why the program can't use all eight megs of your proposed RAM expansion to store samples in.

### EIGHT TRACK MODE

What kind of processor would I need to enable me to use all eight tracks at once? Where can I get one, and can I fit it myself? Will I be able to disable it in case of compatibility problems?

Neil Frazer, Farringdon, Sunderland

You can use all eight tracks without buying a new processor, however, the sample rates are halved, reducing the sound quality by at least 50%. To use eight channels, click the button numbered '8' on the Play screen (below the HQ button). This puts you in 8 channel mode. Now to see all eight channels, click BLOCK in the main options palette, then click the TRCKS:8 button to change the screen display.

If you have the right processor, you can increase the quality of the sound in eight track mode by clicking the HQ button on the PLAY screen.

You'll need a 68030 processor or higher to use this feature, but I think that you can only connect these to the A500 in the form of an accelerator board. An '030 accelerator will cost you hundreds of pounds at least.

Most accelerators can be disabled in case of compatibility problems.

### SLOW TEMPO

The first 10 digits of the primary tempo are reserved for *Soundtracker* compatibility. Does this mean that an *OctaMED* tempo of 11 is the slowest setting, and is actually equivalent to 0?

Steve Gore, Southend, Essex

Yes, a tempo of 11 is as slow as *OctaMED's* primary tempo will go. However, this doesn't take account of the secondary tempo, which can also be used to adjust the replay speed. As you increase the secondary tempo, the overall replay speed decreases, so to set the absolute slowest speed, use a primary tempo of 11 and a secondary tempo of 20.

When you are recalculating tempo values in relation to a tempo you have already set, you should treat the primary tempo as having started at 0 (even though 11 is the first value you can use for *OctaMED* tempos). For example, the current primary tempo is 21 in hexadecimal (33 in decimal), and you want to increase it by a third. Simply divide this number by three, and add the result to the original

number, i.e., in hex  $21/3+21=2C$  (in decimal  $33/3+33=44$ ).

### SOUNTRACKER INCOMPATIBILITY

Although *OctaMED* has a *Soundtracker* save option, I find that the tempo is all screwed up. Why, and can I avoid this?

Richard Maize, Pett, East Sussex

If you are adjusting the primary tempo of your songs, you may run into problems. Although values below 11 are used for *Soundtracker* compatibility, the results are far better if you set the primary tempo at 33, and only adjust the secondary tempo for speed changes. You can set the secondary tempo using the '9' command, i.e. C-3 10914. Reading from left to right, this plays note C of octave 3 using instrument 1 and sets the secondary tempo to 14 (in hexadecimal). You should also be careful not to use player effects commands that *Soundtracker* doesn't support.

### MIDI PITCH SLIDES

The slide effects (player commands 1 and 2) don't seem to work at all well in MIDI. Why not, and what's the alternative?

Letitia Peran, Horncastle, Lincs

The slide effects do work, but they function in a totally different way to when you are working with samples. When using samples, the value after the slide command tells *OctaMED* how far to slide in semi-tones (a semi-tone being the smallest amount by which you can slide).

When you use the slide commands with a MIDI instrument, they control the pitch-bender which is not graduated in semi-tones. A MIDI pitch-bender understands a decimal range, which apparently varies from instrument to instrument. To make things more complicated, this range doesn't represent a constant or specific amount of pitch change, it's all relative to the settings on your instrument and your personal preferences.

Most MIDI instruments that accept pitch-bender information allow you to specify the maximum range (in semi-tones!) by which the pitch may be altered. For example, you could specify that the maximum is only one semi-tone, which would mean that an *OctaMED* pitch-bend value of FF would barely change the pitch of a note by one semi-tone.

With my instrument I find that the easiest thing is to set the maximum range of its pitch-bender to 12 semi-tones (one octave). As I rarely need to bend a note beyond this, it's more than adequate. To slide by a full octave, I send a value of 8D which seems to do the trick. You may have to experiment to find your ideal settings. The pitch-bend command DOES NOT reset the pitch of a note after the change has been performed. If you lower the pitch of an instrument by one semi-tone, it will continue to play ALL notes using that instrument one semi-tone lower until you tell it otherwise.

The easiest way to reset the pitch of an instrument is by sending a pitch-bend of zero, i.e. C-3 10100, or C-3 10200 (either version will work). One thing that you should beware of is the fact that pitch changes are cumulative until the pitch-bend has been reset. Therefore, sending a value of 01 five times has the same effect (only slower) as sending 05 once!

## RAM SPECIAL

**Some sort of RAM expansion is probably the first and most popular upgrade for Amiga owners. But along with a bewildering choice of expansions there comes a vast amount of problems. This special is devoted to answering some of the more common problems that readers have come across.**

### RAM MEANING

I have heard the A501 described as RAM, memory, fast RAM, an upgrade and an expansion. Why are there so many different expressions, do they all mean the same thing? What is the difference between RAM and ROM?

Stuart Turner, Stroud

The expression RAM is an acronym for Random Access Memory, and its full name refers to the fact that any part of it can be accessed at any time for reading or writing by the Amiga. ROM stands for Read Only Memory, and as it says, you can only read information from such chips, nothing can be written to them, so their contents cannot be changed. The Amiga's operating system is stored on ROM chips, although there is a 512K RAM area into which programs can be loaded (1Mb on the A500 Plus and A600).

There are two types of RAM which the Amiga recognises: Chip RAM, and Fast RAM. Extra memory added to it (such as the A501) usually comes in the form of Fast RAM, whereas internal memory is described as Chip RAM. See the next letter for a more complete explanation of the difference between these two types.

Upgrade and expansion are just phrases used to describe the RAM's function in relation to your computer, i.e. they expand or upgrade its facilities, and in some cases, its capabilities.

### FAST CHIPS

I keep on hearing Chip and Fast RAM mentioned, but I don't know what it all means except Chip

RAM seems to be preferable for some reason. Why is that?  
Joshua Cohen, Queens, New York

For most applications, Chip RAM is preferable, although not always essential. Information stored in Chip RAM can be accessed directly by the Amiga's custom chips (such as the 'blitter' which handles fast graphics manipulation), whereas information stored in Fast RAM has to be copied into Chip RAM before it can be used. This transfer takes time and can obviously slow things down to unacceptable levels when processes (such as sound sample handling or animation) require rapid manipulation.

In the early days of the Amiga many packages had to use Chip RAM, but nowadays, most software can take advantage of Fast RAM, or can even read and write directly to disk in real time. Although Chip RAM limitations have been minimised, having a lot of it will still enhance certain operations.

By using the 8372 or 8375 Agnes chips, most Amigas can be upgraded to one or two megs of Chip RAM.

### UPGRADE CONFLICT

I have an A500 with a half meg upgrade and I was considering buying a GVP Series 2 hard drive. My internal expansion can be converted from Fast to Chip RAM by cutting and joining some tracks on the computer's mother board and fitting a new Agnes chip, but I was wondering if this adaptation would affect any RAM that I have installed on my hard drive?

Can you tell me of anywhere that sells SIMMs cheaply?

Craig Homer, Halesowen, West Mids

The GVP drive has auto-configuring RAM which will not conflict with any Chip RAM that you have on-board your computer. However, the A500's Gary chip is only capable of addressing (speaking to) 8Mbs of Fast RAM, therefore if you had two megs on your computer, it would be pointless adding a full eight to the hard drive. Having said that, I recently saw a 9Mb expansion for the A500 advertised, which seems to contradict everything that Commodore and developers have said is possible. We'll just have to see if it was a mis-print or if they've found a way to stretch the limitations of the humble A500...

I believe Cortex sell 1Mb 16-Bit SIMMs for about £25 each. Phone them on 051 236 0480. Gordon Harwoods sell 4Mb 32-Bit SIMMs (for the A530 Turbo) for well under £150 each. Phone them on 0773 836781.

### HOW TO UPGRADE?

I own a 1.3 Amiga with a GVP Series 2 hard drive (unpopulated), a KCS Powerboard and an Epson LX-800. Although I have 1Mb of RAM at present, I'd like to increase this as inexpensively as possible, since I'm a student on a tight budget.

I understand that the GVP will house SIMM chips, though I'm told that one has to buy them two megs at a time. I've also seen an advert in a magazine claiming to be a 'fatter Agnes' of 2Mb (8372B/PAL) at a much cheaper price than the SIMM chips. What is the difference between the two, and would the latter do the trick? What do you recommend? By the way, what exactly is FaaastRAM?

Mike LT. Thomas, Mid Glamorgan

The GVP Series 2 has four RAM slots and will accept up to four 1Mb SIMMs or two 4Mb ones. The Agnes chip that you've seen advertised doesn't come with two megs on-board, it merely allows you to use up to two megs of Chip RAM if you have the appropriate expansion. Sorry, I don't know what FaaastRAM is, although it sounds like GVP's proprietary name for expansion RAM, but I could be utterly wrong!

### WHY NO 1 MB CHIP RAM

I recently used the SysInfo program from a CU coverdisk and was told that my Amiga 500 contains an ECS 1Mb 8372A Agnes chip. My Amiga was supplied with Workbench 1.3 and was bundled with the A501 half meg RAM expansion.

With this Agnes chip I would have expected to have a full 1Mb of Chip RAM (the standard RAM plus the A501), yet on loading D-Paint it only registers half a meg of Chip and half a meg of Fast RAM. Is there a problem with my Amiga? Can I upgrade it to 1Mb of Chip RAM?

I'd still like to use my Amiga with games that require half meg of Fast RAM. Is there a solution?  
Naeem Ahmed, East Ham, London

The presence of an ECS 8372A Agnes does not automatically give you one meg of chip RAM, it merely gives you the capability to upgrade to such a configuration. To take advantage of this, you'll need to perform an advanced RAM installation, which involves permanently changing your Amiga's circuit board. If your computer is still under guarantee, this process will invalidate its warranty. Worse yet, the advanced installation can't be performed using your A501 expansion, you'll have to buy a different one (yes it was damned silly bundling the A501 with your Amiga!).

Both the Zydec (from Evesham Micros, tel:0386 765500) and Power Computing (tel: 0234 843388) expansions allow you to perform this installation, but phone and check first.

There are utilities which let you turn off your fast RAM, but I have never heard of one that lets you disable a chip expansion. If you still require fast memory, you might be better advised to buy something such as a 2Mb expansion, thus giving you an extra one and a half megs of Fast Ram to play with. After all, you can never have too much memory!

### QUESTIONS, QUESTIONS

I'd like to end this month with a request to anyone who plans to write in for help. Of course I love to receive your letters, and I read through each and every one, but could you please try and get to the point before you've written 10 pages of unnecessary information! I really don't care if you have a cat called Fluff, or your best friend once bumped into the programmer of Asteroids. I need to know what your problem is, and what set-up you have (if it's relevant). Can you also try to write in legible writing. Many's the time that I've been interested to read someone's letter, but can't decipher their hand-writing. Remember, I have other things to do in a month [most of which cannot be mentioned in polite, nevermind police, company - Dep Ed] apart from trying to interpret hieroglyphic handwriting!

In the next issue I'll be back with the good ol' fashioned Q&A section, so keep your queries coming in. I'd like to sign off for this year with seasonal greetings to all you hardened Amiga addicts out there, the new year should prove very rewarding.

## MEMORY UPGRADES

### 1MB RAM for A600

Gives 2Mb CHIP MEM. Ultra low power design. Battery backed-up clock. Low component count for maximum reliability (1Mb) **£37.95**

### CORTEX 8Mb RAM for AMIGA A500/A500plus/A1000

The ONLY RAM upgrade approved by Commodore UK **Amiga shopper best buy**. (Warranty remains intact). Zero wait states. Through port. Compatible with A590 and all major hard disks. Uses 1MB SIMMs. Includes RAM test software.

2MB **£178** 4MB **£227** 8MB **£325**

### CORTEX 1/2 Mb RAM for A500

Essential A500 upgrade - 1Mb Amiga is now standard lower power 1Mbit DRAM latest technology high-quality components 'Fatter Agnus' compatible for 1Mb CHIP MEM. Low profile enable/disable switch **£14.95** (with clock **£19.95**)

### CORTEX 1Mb FOR A500 plus

Gives 2Mb CHIP MEM. Ultra low power design Low component count for maximum reliability

1MB **£27.95**

### GVP 8Mb RAM for A1500/A2000

Zero wait states. Uses 1MB SIMMs. 2, 4, 6 or 8Mb configurations

2MB **£142** 4MB **£191** 6MB **£240** 8MB **£289**

## CORTEX ROM SHARERS

Essential upgrade for all Amiga owners. Enables safe and easy switching between 1.3 & 2.04 Kickstart ROMs **£14.95**

(as above with external slide switch, ideal for A600) **£9.95**

## GVP IMPACT SERIES II HARD DISK WITH RAM (A500HD8+)

52Mb Hard disk system with up to 8Mb of RAM, Factory-fitted Quantum Pro-drive, 11ms access. Uses 1MB SIMMs (See RAM CHIPS section for prices) Game switch (hard drive disable) and power supply. (40Mb drive) **£272** (120Mb drive) **£409**

### GVP A530 TURBO HD

40Mhz 68030EC accelerator. Optional maths co-pro. Up to 8MB 32Bit 60ns RAM! Quantum Pro Hard Disk 1Mb RAM Fitted! For Extra Memory see RAM CHIPS

52Mb **£639**  
120Mb **£729**

## ENHANCED CHIPS

### CHIP SET (E.C.S.) UPGRADES

8372A Fatter Agnus..... **£29.95**  
8373 Super Denise ..... **£25.95**

V1.3 Kickstart ROM V2.04 Kickstart ROM

**£26.95** **£29.95**

MegaChip 2000 with Super Agnus (allows 2Mb Agnus to fitted to A500/1500/2000)..... **£192**

## RAM CHIPS

1Mb x 8 bit SIMMs (for CORTEX, GVP etc) ...each **£24.50**  
4Mb x 8 bit SIMMs (for GVP etc).....each **£89.00**

4Mb for GVP A530 **£179.50**

32bit 60ns SIMM.....each **£179.50**

256 x 4bit DIPs (for A590, 2091, ICD etc) .....each **£3.00**

1M x 1bit DIPs (for older A2000 cards).....each **£3.00**

1M x 4bit Static-Column Mode ZIPs (for A3000) each **£17.95**

# REFLEX TECHNOLOGY

## WE GUARANTEE YOU CAN'T BUY CHEAPER!

Reflex will match any genuine price offered by one of our U.K. competitors on goods that are in stock on a like-for-like basis. This offer applies at the time of purchase only and does not apply to prices offered in sales of bankrupt stock, clearance or closing-down sales.

All products shipped somewhere, where possible. Allow 14 days for delivery. If ordering by cheque. Make cheques/P.O.'s payable to Reflex. All major credit cards accepted

## 2 YEAR GUARANTEE

All products bearing the Cortex brand name carry a 2 year guarantee. Other products in this advertisement carry a 1 year guarantee.

DELIVERY CHARGES: £2.95 for orders less than £100 (Recorded Delivery) £7.00 for orders over £100 (Insured next day courier)

UNIT 323, QUEENS DOCK COMMERCIAL CENTRE, 67-83 NORFOLK STREET, LIVERPOOL L1 0PG. TEL: 051 708 5588 FAX: 051 707 2370

### A600 SMART CARDS

PC MCiA format (credit card) Memory for A600.

2Mb **£119.95**

4Mb **£149.95**

# WORLD OF WONDERS

## CIX - PART 2

**CU's resident Neuromancer, Mat Broomfield continues his leisurely look around CIX, one of Britain's biggest and busiest computer conferencing systems.**

### EXCHANGE AND MART

Last month, I talked primarily about the conversational and educational aspects of CIX, so this time around I thought that I'd tell you about some of its other features. As I mentioned before, CIX differs from a bulletin board in one major regard: whereas bulletin boards are primarily used for the exchange of data, CIX is used for the exchange of ideas and opinions. However, I wouldn't want you to get the wrong impression here. You can use CIX to exchange data too, and there are two major ways of doing so.

### DATA DAZE

The most accessible method is via File conferences. Within many conferences, special file areas are set up for the exchange of data. Into these areas users can upload any files that they feel other conference members may be interested in.

Taking the Amiga conference as an example, the files area contains many of the most popular Fish utilities, as well as tools specifically written by other CIXen (members of CIX). In addition to these general tools, you can also find a number of 'patches' and 'fixes'. These are small programs written by companies to enhance or alter a software product that they manufacture or distribute.

For example, it's a well known fact that *Deluxe Paint 4* was marginally incompatible with the A600 because its perspective options required the keypad keys which were no longer present on the new computer. Electronic Arts promptly wrote a patch that overcame this problem, and the patch was very quickly posted on CIX where anyone with a modem could access it. Gold Disk are another company who have used CIX as a fast way of distributing updates for their *Professional Page* program.

### FREE SOFTWARE

Any member has free access to all files in a conference, and he can quickly find out what files are available by typing FLIST. This will generate a list of all files, complete with their size in bytes. Most files are suffixed with an extension such as .Lha, .Zip, .Zoo or similar. These suffixes refer to the way that the files were archived before being uploaded. So far as I've seen, all files are archived prior to storage on CIX. In theory, this means that file downloads will be quicker, but I'm not necessarily sure if this is the case for CIXen who use the

Z-Modem protocol (which features its own on-line compression anyway).

One thing that is certain is the fact that you really MUST own at least a couple of the most popular archivers. Most of the latest updates to the various archivers are available on CIX, but of course, unless you have an archiver to unarchive them then...

Fortunately, all of the worthwhile archivers are available from public domain libraries, so it won't be too difficult to get started.

### PERSON TO PERSON

Another way of exchanging data on CIX is by using a feature called Binmail (short for binary mail). Using the Binmail system, one user can transfer a program or data directly to another without other CIXen having access to it (or even being aware of its existence). To send a file by binmail, simply upload it to a private directory, and then specify who it's to be sent to and it will instantly be transferred to their private directory. When they next log onto CIX, they'll be told that a file awaits them, and they can download it at their leisure.

Speaking of mail, CIX also has a frequently-used personal mail system for confidential communication between subscribers. Unlike the closed conferences that I described last month, CIX mail only allows a single specified user to read your messages. Sending a mail message couldn't be easier; simply type 'Mail' to enter the mail system, then 'Send' and then the name of the person or company to whom you want to send mail. You'll be prompted for a topic name, and in this regard, sending mail is identical to posting a new message in a conference. Other similarities between the two actions also exist. For example, having received a mail message from someone, you can then use the Comment command to respond to his mail in the same way as you can when remarking to earlier remarks in a conference thread.

One area in which private mail is used extensively is the computer auction.

### GOING, GOING, GONE

The auction can be one of the most exciting conferences on CIX, and although the majority of goods on offer are PC-related, one can often find a great Amiga bargain there too. It works in a similar way to a normal auction, except that there's no middle man demanding his cut!

The seller posts his goods on the conference

and leaves things to run their course. If people are interested in whatever's on offer, a thread will gradually develop with bid and counter bid to-ing and fro-ing between all interested parties until one of them emerges victorious. Mind you, the victor doesn't always really win, because the CIX auction is just like a 'real-life' auction and it's all too easy to become carried away. There have been occasions when bidders have ended up bidding more than the purchase price of an item!

Of course, it can work the other way too. If only one person is interested in an item, he can sometimes walk away with an absolute bargain such as the person who recently purchased a Phillips monitor for only £80, or the lucky chap who bought a scanner for a tenner!

To safeguard against their goods being sold too cheaply, a seller may specify a reserve price, below which he will not sell his goods.

Once an item has been sold, the seller will usually inform the successful bidder by private mail.

If a bidder wants to know more about the seller, or vice versa, he can use a feature called the Resume.

### THIS IS YOUR LIFE

Each member of CIX has a resume, although he or she can choose to leave it empty if he so desires. Apart from detailing when a user was last on-line, resumes give information about a user, but only what he/she wants others to know. Many people, especially companies, use this as a way of advertising their services or abilities, and of giving out phone numbers and addresses. Most resumes will give some kind of potted career history, and skills and experience outline for their owners, and may include a list of the equipment they currently own or are working on. Some resumes are peculiar, some are boring and others are outright hilarious. In fact it seems that many CIXen take great efforts to produce a personal resume designed solely to split the unwary reader's sides!

One of the most interesting of these belongs to a gentleman called R. Sewell [Yes, we know how it's pronounced - Ed.] in which he includes a ASCII picture with the following description: 'If you look at this through a hundred yard fog, it looks a bit like me seen through a cheese grater!'

He also lists the following among his interests: 'serious' pedantry, stupid puns, evil coffee and long and detailed arguments. It gives you quite a flavour for the guy's sense of humour, doesn't it?! (Note: For fellow CIXen who may be worried; yes I did secure R. Sewell's permission before reproducing part of his resume.)

Before I round off on the subject of CIX mail, it's worth noting that CIX is also a gateway to numerous other bulletin boards and conferencing systems. You can use it to access the world-wide Fidonet group which lets you transfer mail and data (often just for the cost of a local phone call). It also gives access to CompuServe, although just in a read-only capacity.

### TIME TO HANG UP

**Hopefully our in-depth look at the world of CIX has inspired you to get on the modem and start talking, so why not drop us a line.**

**Next issue we'll return with more info on the wonderful world of Comms and the continuing possibilities of talking through the Amiga.**

# CLUB CALL

**We are finding it very hard to restrain the Club Call page. Our mailbag has been bursting at the seams with letters from new clubs wanting coverage in the only guide to the Amiga scene. So, for the best of the current crop from all over the world, read on.**

## AMIGAMANIA

88 Blackbull Road, Folkestone, Kent CT19 5QX.  
Tel: 0304 375311.

Amigamania, the first issue of this club's bimonthly magazine, is now available. The club and publication have no links with the magazine Amigamania, but the new journal does have 28 A4 pages covering a variety of subjects for a cover price of 80p. News about Xmas bundles for the A600 and Workbench 2.1, facts about the A4000, reviews of hard and software, including Public Domain, the start of an inventory of programs in the Fred Fish Collection from disk 600 onwards, and a competition with a mystery prize worth £50 are on offer. Subscription to the magazine is included in the club's £10 yearly membership fee, which also entitles members to free advice on their computing problems. The editor is Dave Cryer, who may be contacted at the above address.

## AMIGA ATHENS CLUB

9 Derfeld Road, Patisia 11144, Athens, Greece.

Formed by two friends who have used Amigas since 1988, this classically-located club is now two years old and has 40 members across Greece. It aims to show that the Amiga is being taken seriously in that part of the world.

Membership of the club is free, with members needing to pay only 50p for the cost of blank disks used to obtain software from the small, but up-to-date, PD library (and postage and packing costs for all items obtained by mail). An enormous collection of tips and cheats has been compiled for all sorts of games, including full solutions for many adventure games. Helpful information on the Amiga is available, including leaflets on such subjects as desktop publishing and word processing. A bimonthly disk-based magazine is also produced by the club, containing helms from the USA and Germany, as well as Greece.

The club meets each month, dealing with both serious subjects and competitions on *Kick-Off 2* and *Lotus 2*, and dogfights in *Falcon* and *Knights of the Sky* on RS-232-connected Amigas. British readers will, no doubt, be interested to hear that the club also possesses a databank of information about spending holidays in Greece, available to prospective members free of charge. For details, contact Stefanos Papamichael at the address given above – but be sure to enclose an international reply coupon if writing from outside Greece.

## AMOS PROGRAMMERS' EXCHANGE

7 Majestic Road, Hatch Warren, Basingstoke, Hants, RG22 4XD.

Run by James Lanng, this group is planning a new disk magazine exclusively by and for AMOS programmers. The subscription fee may seem high at £15 per annum for UK subscribers and £18 for those overseas, but James believes it'll be worth every penny. Some of the ideas he is toying with are a database of current APE members' developments, so that programmers, musicians and graphic artists can find out where they are needed, regular news updates, and competitions. If you're interested in subscribing or contributing to the APE disk magazine (or both), write to James.

## CDTV USERS ASSOCIATION

113 Fouracres Road, Newall Green, Manchester M23 8ES.

Even though CDTV is still a recent innovation, this club has already found a membership of about 100 users. A free newsletter for members is being compiled, to contain articles and (as its name suggests) news and letters. A list revealing the software compatible with the CDTV is in preparation, and the club is also pestering software companies to label their products for compatibility – a cause all you new CDTV owners will no doubt wish to support. For more information, please write to the chairman, Julian T. Lavanini at the above address.

## COMP-U-PAL

C/Q MBA, PO BOX 29, Knoxfield 3180, Australia.

Comp-U-Pal produces a reasonably substantial bimonthly newsletter that divides its coverage between the Amiga and the C64. A lot of the material is aimed at those new to the Amiga, complementing a list of Amiga-using pen-pals who can share knowledge of, and opinions on, their computers. Disks containing programs written by club members are distributed with the newsletter, and feature, for example, a utility aiding use of function commands and shortcuts in the Command Line Interface, and a demo including animation.

Reviews of PD and new hardware (such as *Digital Composite Television*), and game cheats also appear in the newsletter. A helpful article on AmigaDOS error codes and a feature on wordpro-

cessors and DTP packages for the Amiga were contained in the last-but-one edition; a Command Line Interface (CLI) tutorial and a five page update on Amiga viruses appears in the most recent. If you seek further details about Comp-U-Pal I suggest you send the club a stamped self-addressed envelope, or an international reply coupon if writing from outside Australia.

## DARLINGTON COMMODORE USERS CLUB

1 Ruby Street, Darlington DL3 0EN.

This County Durham based club, catering primarily for the Amiga, offers members a monthly newsletter which (like all good publications) carries a coverdisk. Coverdisks feature games and utilities, whilst the newsletter itself contains news and reviews of games, PD, serious software and hardware. Letters, advice, cheats, competitions, classified ads and more, also appear. The annual membership fee of £5 includes a subscription to the newsletter. The club aims to stay local and personal, and will arrange meetings as funds permit. For further details and a membership application form contact the above address.

## EXETER 16 BIT USER GROUP

25A Gloucester Road, Exwick, Exeter EX4 2EF.  
Tel: 0392 72889.

If you live in the Exeter area and own an Amiga, ST or PC, this club may be just what you're looking for. Established little more than a year ago with the aim of creating a resource centre for computing, the club's members include programmers, artists, musicians, game players and novices, with varied backgrounds, but shared interests.

Meeting every week, the club hopes to satisfy whatever the requirements of the membership are. Help forming coding teams, use of printers, samplers and digitisers, etc. are all provided.

The group says that whether you are a serious user, game fanatic, or absolute beginner and would like to help build a vital resource for local computer users, contact the chairman, Andrew Deeley, at the address given above.

## GET IN TOUCH!

**If you run a club specifically aimed at the Amiga owner, get in touch. We'll promote your club through these pages, as well as provide a free subscription to CU Amiga. Send all entries to: Steve Prizeman, Amiga Clubs, CU Amiga, 30-32 Farringdon Lane, Farringdon, London, EC1R 3AU.**

**If you write to any of the groups featured in Club Call, and require a reply, please help by enclosing a stamped self-addressed envelope (or an international reply coupon if contacting overseas clubs).**

# SEIKOSHA

- DOT MATRIX
- LASER
- THERMAL

# PRINTERS

Silica Systems are pleased to recommend Seikosha printers to you at LOW PROMOTIONAL PRICES. The Seikosha range is built to the highest standards, by a company that is used to manufacturing high quality precision products. In fact, you may be wearing one of these products on your wrist, as Seikosha are part of the massive Seiko/Epson group (with a turnover of £6 billion and 18,000 staff).

When you buy a Seikosha dot matrix printer from Silica, we will give you a Silica PRINTER STARTER KIT (worth £25.00 + VAT = £29.38) FREE OF CHARGE (see panel below). For further information on the Seikosha range of printers, complete and return the coupon below. Or, if you can't wait to get your hands on a new Seikosha printer, telephone our mail order hotline, 081-309 1111 to place your order now.

## FREE! FROM SILICA

- **DELIVERY** Next day - anywhere in the UK mainland.
- **HELPLINE** Technical helpline during office hours.
- **STARTER KIT** With every Seikosha dot matrix printer.

### ON-SITE WARRANTY

All Seikosha Dot Matrix Printers come with a 12 month repair warranty included in the price. Silica are now pleased to offer a full one year on-site warranty option with Seikosha Dot Matrix Printers for only £10.00 + VAT extra! In the unlikely event of a problem with your Seikosha printer, an engineer will visit your home or business within 8 working hours of your call (on-site warranty effective for UK mainland only).

1 YEAR - ONLY £10  
OP-108 laser includes 1 year on-site warranty.  
(On-site warranty not available with Smart Label printer) (+VAT = £11.75) Ref: POS B195

## NEW MODELS - NEW LOW PRICES!

### 9-PIN 192cps PRINTER

**NEW LOW PRICE!**

192 CPS 80 COLUMN

- Seikosha SP-1900 Plus - 9 pin - 80 col
- 192cps Draft, 48cps NLQ
- 1K Printer Buffer + 2 Fonts
- Parallel Interface
- Graphics Resolution: 144x72dpi
- Epson and IBM Emulation
- Auto Sheet Feeder Option
- FREE Silica Printer Starter Kit

PRINTER RRP £155.00  
STARTER KIT £25.00

TOTAL VALUE: £180.00

SAVING: £80.01

SILICA PRICE: £99.99

**£99.99**

+VAT = £117.49 Ref: PRI 8195

### LABEL PRINTER

**NEW! 'PLUS' MODELS**

The NEW Seikosha Smart Label Printer Plus range now includes a PC version with both DOS and a 'Windows' driver and an Apple Macintosh model. All are able to mix fonts on the same label and have many other new features. They will provide letter quality address labels, file labels and bar code labels on demand. The Smart Label Printer sits on the desk, working in the background, while your normal desktop printer gets on with the documents. Using memory resident or DA software, the Smart Label Printer Plus is able to produce a label from the screen text of most popular software packages. The Smart Label Printer Plus is supplied complete with a power cord, a serial cable for connecting to your PC, SLP software, a roll of labels and a 1 year guarantee. The Apple Macintosh version (PRI 8012) is also available at a new low price of £165.00 + VAT.

RRP £249 + VAT

SILICA PRICE

**£185**

+VAT = £217.38 Ref: PRI 8015

### FREE! STARTER KIT

Every Seikosha dot matrix printer from Silica comes with the Silica Printer Starter Kit, worth £29.38 (£25.00 + VAT) completely FREE OF CHARGE. It includes all you need to get up and running with your new printer.

- 3 1/2" Disk with Amiga & ST Printer Drivers
- 1.8 Metre Parallel Printer Cable
- 200 Sheets of Quality Continuous Paper
- 100 Continuous Tractor Feed Address Labels
- 5 Continuous Envelopes on Tractor Feed

Printer owners may order the Silica Kit (ref: KIT 5000) for only £24.38 - £5 off RRP! WORTH £29.38

151092-1235

## SILICA SYSTEMS OFFER YOU

- **FREE OVERNIGHT DELIVERY:** On all hardware orders shipped in the UK mainland.
- **TECHNICAL SUPPORT HELPLINE:** Team of technical experts at your service.
- **PRICE MATCH:** We normally match competitors on a "Same product - Same price" basis.
- **ESTABLISHED 14 YEARS:** Proven track record in professional computer sales.
- **£12 MILLION TURNOVER (with 60 staff):** Solid, reliable and profitable.
- **BUSINESS + EDUCATION + GOVERNMENT:** Volume discounts available 081-308 0888.
- **SHOWROOMS:** Demonstration and training facilities at our London & Sidcup branches.
- **THE FULL STOCK RANGE:** All of your requirements from one supplier.
- **FREE CATALOGUES:** Will be mailed to you with offers + software and peripheral details.
- **PAYMENT:** Major credit cards, cash, cheque or monthly terms.

Before you decide when to buy your new printer, we suggest you think very carefully about WHERE you buy it. Consider what it will be like a few months after you have made your purchase, when you may require additional peripherals and accessories, or help and advice. And, will the company you buy from contact you with details of new products? At Silica Systems, we ensure that you will have nothing to worry about. We have been established for almost 14 years and, with our unrivalled experience and expertise, we can now claim to meet our customers' requirements with an understanding which is second to none. But don't just take our word for it. Complete and return the coupon now for our latest FREE literature and begin to experience the "Silica Systems Service".

# MOVING E

**Commodore's machine is capable of much more than playing games or running a graphics package.**

**Mike Gerrard investigates what one man is doing to make his Amiga move the world.**

**AMIGA WORLD**

## **WALK, DON'T WALK**

Everyone knows how moving a joystick or mouse causes things to happen on the Amiga's screen, but very few applications address the opposite possibility: that by entering commands on the screen you can animate objects, cause wheels to turn, switch lights on and off... even run a robot! Peter McNaught, who has an MSc in Mechanical Engineering, has spent the last 12 months working on a device that will do all those things and more: ROBOMASTER.

'ROBOMASTER,' he explains, 'is an interface that plugs into the Amiga, and by using the software provided you can drive up to four DC motors simultaneously, such as the motors that drive Lego, Mecanno and other models. You can also control touch and photo-sensors. All of these are controlled from the software, which requires no typing and which I deliberately designed to be as easy to use as possible.'

## **WHAT A CAD!**

McNaught became involved in computers through his involvement in Computer Aided Design, and before starting his own firm, Cammac Developments, was working for a company setting up CAD systems. His contract with the company ended about 12 months ago, and this coincided with his idea for ROBOMASTER, so he decided to go it alone. At the time, there was nothing like it available for the Amiga.

This lack of products for the Amiga spurred Peter into action. 'I'd seen a Lego product,' McNaught says, 'which is compatible with the BBC Micro and which is used in schools to drive Lego models. You plug your input and output connections into this and it will drive the simple models that you can make from Lego. I looked at that product and I thought that the interface was very bad, very difficult from a user's point of view, especially for a young child. You have to type everything in, it's not self-explanatory and you have to refer to the manual the whole time to see what's going on. I knew the Amiga quite well, and felt that it could do this so much better as far as the interface was concerned, and also from a functional point of view. And it's taken me a year to produce my final prototype for the hardware, and to write the software.'

## **LIGHT RELIEF**

McNaught has had an Amiga for several years, and admits to using it for games as well as word processing: 'Games were very much light relief at the end of the day when you come home from a hard day's work, but the machine is capable of much more than that and a lot of people don't realise it.' He chose the Amiga because of its popularity as a games machine, reasoning that there was a big market out there in the homes. 'Even when I was just starting the project there were a million Amigas in the UK alone, with about three million sold worldwide.'

The playing of games has had to take a back seat for the last year, however, as all his time and energy has gone into building the hardware and writing the software for ROBOMASTER. The hard-

ware is a small box which, surprisingly, plugs into both the printer port and the second joystick port. 'I didn't go for the obvious choice,' he says, 'of using something like a cartridge slot, as that would be unique to a particular computer and if ROBOMASTER is successful on the Amiga I want to be able to convert the device to run on other machines at a later date. If you use a cartridge slot you have to virtually start from the beginning with each machine, but most machines send similar signals through their printer and joystick ports, making conversion easier.'

## **CONTROL LANGUAGE**

Currently, however, McNaught is more concerned with putting the final touches to the Amiga original. The software is certainly impressive, and very simple to use. The control language has few commands to master, and is a kind of cross between Basic and Logo. Down the left-hand side of the screen are the output commands, and clicking on any of these automatically enters the command in the main window. There's also a numerical keypad, a space bar and a RETURN key visible on-screen, so that everything is entered simply by clicking.

The right-hand side of the screen includes the input and the timing commands; you can switch a motor on for a specified time, or until it reaches a certain point, and then store the time taken for later recall or processing. Beneath these commands are the simple flow control commands: REPEAT, UNTIL, IF, ELSE and so on. Each icon on the screen also has a HELP feature attached to it. If you press the HELP key and then click on an icon, one or more screens of explanation pop up, with some example programs showing how the commands will work in practice.

To demonstrate how ROBOMASTER works, McNaught connected the wires to a small Lego model, with separate motors driving the left and right wheels, a small light and a light sensor at the front, and touch sensors at the front and rear. The motors can be driven at a range of speeds, and set independently. Switch only one on and the model will turn in a circle. Set the wheels at different speeds and the model will move forward in an arc. Set them to negative values and it moves in reverse. The software's TIMER command allows any output to be switched on for a set period, then off again. It is easy to see that a model can be turned through an angle simply by switching one of the wheels off for a few seconds, while the other keeps turning.

For an example, McNaught set both wheels turning at the same speed, and kept them going till the touch sensor at the front reached a barrier, at which point the program sent the wheels into reverse, till the touch sensor at the rear reached a barrier. This is obviously a very simple example which demonstrates that the model will go back and forward between two barriers. It's the equivalent of everyone's first Basic program: PRINT 'HELLO'. You can build on this, of course, to make more sophisticated movements. A model can be programmed to find its way out of a maze, by turning a few degrees to the left or right, every time it meets an obstruction.

The ROBOMASTER device is connected here to a Lego vehicle, which has been enclosed in a simple structure. The light sensor mounted at the front enables Peter to use ROBOMASTER to tell the vehicle not to cross the boundary.

# XPERIENCE

## FOLLOW THAT LINE

The light sensor also allows the model to recognise lines painted on the floor. It can be made to continue going forward till it reaches a black line, at which point it stops. It can also be programmed to follow a line, as each time it veers off it's instructed to turn back onto the line.

'This,' says McNaught, 'is exactly the same way that many large warehouse systems work these days. They use robots like fork-lift trucks to collect goods from the shelves. Dark lines along the floor guide them to anywhere in the warehouse, so you can pre-program the robot to go to a certain place, pick up an object, and bring it back to whatever point you wish, for example the central control.'

In case anyone gets too ambitious, the hardware interface is isolated from the computer: should anyone accidentally put 2000 volts through it, the Amiga shouldn't be damaged. ROBOMASTER runs off either a 9-volt battery or the mains, with batteries costing about £3 each, or a mains adaptor available for £28. McNaught is already looking to upgrade the program, and a natural development will enable the user to control a model by using the joystick.

'One of the difficulties,' he says, 'of developing a device like this is that it sounds quite simple but the potential is tremendous. The options are limited only by the imagination of the user.' And he feels that if anyone can imagine clever uses, Amiga owners will do it first.

## I THINK, THEREFORE I AM

Robots have been the subject of science fiction for longer than the technology to build them has been available. From Metropolis, through Lost in Space ('*Danger, Will Robinson*') to Terminator, robots have always held a particular fascination for mankind, especially ones that look like humans ('and man created robot in his own image').

But robots can do more than just serve the foibles of human nature. In many areas of industry robots perform repetitive tasks with greater speed and accuracy than was ever possible on a human production line.

We are still a long way from real androids, though. That will depend more on software than on engineering. The idea of a robot with enough pseudo-intelligence to understand a restricted environment around it, and obey simple instructions, is not so fanciful, though. Tomorrow's World has already wheeled out robots that can play snooker and table-tennis (albeit badly). The future is wide open.

Let's hope that it will take the form envisaged by Isaac Asimov with his Laws of Robotics and not that of the Terminator films!

**ROBOMASTER costs £99.95**  
**from Cammac Developments,**  
**Unit 1, Hartley's Yard, Church**  
**Lane, Wexham, Slough SL3 6LD**  
**(0753 552383).**

The ROBOMASTER interface has been designed to be as user-friendly as possible. There is very little typing to be done. All commands can be accessed through a simple point 'n' click screen.

ROBOMASTER is a compact device that easily sits next to your Amiga on any desk top. You can even get a cup of coffee on there as well!

This little box could be the start of a new era of possibilities for the Amiga. Whilst it is unlikely that we will see it being used to control heavy industry, it is perfect for schools and other institutions. Imagine a whole generation of schoolkids using Amigas in school – they'd never want a console again.

Peter McNaught has spent over 12 months designing the ROBOMASTER. Judging by what we've seen of it, his efforts have been very worthwhile indeed.

# BACKCHAT

Welcome to another packed letters section. This is where you get the chance to air all those opinions that have been left festering in the back of your minds. And where, this month, Tony Horgan gets the chance to handle them (only whilst wearing a strong pair of thick rubber gloves!).

## OVER GENEROUS

Just lately I have been very disappointed with your magazine. For instance, you haven't had any good reviews or previews in the magazine for a while. I would have liked to have seen *Elite 2*, *Desert Strike* or *Gunship 2000* either reviewed or previewed in your mag by now. But no, instead I go out and find them in Amiga Power, so what have you got to say about this then? And what has happened to the review on the Aviator and Intruder joysticks you promised us months ago?

I also think you've been rating some games too highly, like *Silly Putty*. It looks good, but I don't think it's worth 95%. The same goes for *Epic* and *Birds of Prey*. I bought both these games, and I thought *Epic* was worth about 30%, not 91%, and I completely wasted my money.  
Chris Edwards, Cheshire.

I know how you feel. In the distant mists of my gaming past, I bought *Ballblazer* for the C64, on the strength of a 98% review, in what was the best-respected mag of the time – got it home and thought it was a steaming pile of horse manure. And it cost £10, which was a lot of money in those days. That's the thing with reviews: they're just an opinion, which inevitably, some will disagree with. *Epic* is another of those games that tends to split opinion right down the middle – you either love it or hate it. Unfortunately you hate it. As for your previous gripe – we've already covered your first and last examples and *Desert Strike* appears this issue.

## DON'T DO A SOUNESS!

First of all, many thanks for printing my letter in the October issue (A600 price drop). Your reply was concise and furnished me with a couple of points I hadn't considered.

My main point is this: have you ever thought about adopting a section for the 'real novices'? I count myself as one of these, and find some aspects of the Amiga's operat-

ing system virtually impossible to master. I've managed to customise my Workbench (new colours and a pointer shaped like a spooky bat), but I just can't get it to do anything constructive. A few quick questions:

1. What is the clock for? When you switch off the machine, it resets!
2. I'm having no luck copying files from the coverdisk onto separate

disks. I can create drawers, but can't put anything in them.

Finally, I read that big changes are afoot. I'm all for new innovative ideas, but please don't do what Souness has done to Liverpool FC! Phil Noonan, Runcorn.

We try to make the whole mag, including disks, as user-friendly as possible. The idea of a

## SPIRIT OF PD

Your snippet about the controversy over licenceware has urged me to write in. As a user and programmer of PD software, I can see the conflict. The author wants to get returns on his or her program, so they release it as licenceware. As you rightly stated, this does damage the spirit of PD/shareware software, as licenceware is nothing more than cheap commercial software with virtually no overheads. But, and this is the main question – what is the 'spirit' of PD software?

To put it simply, people write PD software and want it spread to as many other people as possible. There's no point in writing the next *Powerpacker* if no-one but your best mate gets to see it. Authors get moral satisfaction knowing someone finds their particular product useful, and there is also the recognition that goes with it.

Shareware just doesn't work, as it is only human nature to take something for free, but licenceware guarantees a small royalty to the author for a quality product. So what is wrong with licenceware? If the authors wish to earn a small return, they should be entitled to.

The only thing that is ruining all aspects of PD software is that the PD scene is being saturated with releases. This may sound a good thing, but how can it be when 60% of material is gutter trash? People see the PD as a means of getting their name in print, and unfortunately they often succeed, even with a second-rate program. The worst example of this, is the PD companies selling (and the magazines reviewing) sampled music disks.

We're not talking about original remixes, but straight recordings from a record. Is there any skill in this? Is this the 'spirit' of PD? PD software is degenerating into a useless heap.

The trash in PD must be gotten rid of. PD companies should tighten their quality controls for both PD and licenceware. Only then will licenceware be properly accepted. As for people like Nico Francois, Chris Homes and others, they are the true spirit of PD.

Wai Hung Lu, Dublin.

From the dawn of home computing, the crap software has always outweighed the good. The PD scene is no different, but while the boom in PD releases has brought its fair share of rubbish, the good stuff is definitely getting better. In my experience there's far less satisfaction and come-back from licenceware releases than PD. Unless you've got something that seriously rivals commercial software, the extra quid or two on the price puts a lot of people off, so it reaches a far smaller audience, and the financial gains are nominal in most cases.

As for complete record sample demos, I can't see much point in them. Eight bit samples are never going to match the quality you'd get from the original vinyl or CD single and you still have to swap disks halfway through. Remixes, on the other hand, while still a bit dodgy on the copyright score, can be worthwhile in their own right, even if you've got the original record. What's more, I like doing them.

Novices section in the Amiga Workshop is interesting... Why not look out for our free pull-out next month – a whopping guide 'specially commissioned for new Amiga users.

Your problem with the clock resetting sounds like you've got a flat battery. Like a car, if the computer has been sitting around for a while without being used (e.g. in a warehouse), the battery could run down. To charge it up, just leave your machine on for about 8-10 hours.

As for your file copying troubles, you'd be best off getting a copy of *SID*, a brilliant PD file-management system that even a retarded monkey with one arm could use. Don't worry about the changes – if CU was Liverpool FC, we'd have just bought half the Italian Premier League, put in a couple of new stands, and laid on free beer and hotdogs at all home games.

## AWAY GOAL

I am writing to extol the virtues of purchasing PD software. Last year I bought *Football League Editor*, a brilliant program by Tony McManus, designed to keep a record of any football league. I duly sent off my £5 fee and was delighted to receive this year's update.

Unfortunately, I couldn't get it to print out. After contacting Mr McManus, a bout of manual swapping and disk exchange occurred, which eventually lead to the program being configured for my system.

The point is, would I have got the same service if I had paid £80 for a commercial program of this type? The answer is no, because:

(a) there is no commercial program of this type, and

(b) once you have parted with large amounts of money for commercial software, the majority of companies do not want to know.

I have had similar support from Paul Robertshaw of Mental Image, and as

# PUT THE S

Lineage - 30p per word to private individuals - 20 words min. 40 words maximum, 40p per word to trade, 20 words min - 40 words maximum. Semi-display - £15 for S.C.C. Ring 071 972 6700. All classified & Semi-display advertising is pre-payable. All classified ads are subject to space availability. **WARNING** - It is illegal to sell pirated copies of computer games. The only software that can be sold legitimately through our classified section are genuine tapes, disks or cartridges bought from shops or by mail order from software houses.

a result, have built up a couple of good friendships. And all for the throw of a dart – erm, I mean all for a fiver. Not bad, eh?

Brian Ball, Ipswich.

## FRED HARRIS FAN CLUB

It's all very well trying to do a hip and trendy computer games program on TV, like Gamesmaster, but that Dominic bloke looks like something out of a Hamlet cigar advert. What's more, he obviously doesn't know what he's going on about, and he thinks he looks cred in his mum's quilted dressing gown.

Bring back Fred Harris and his trusty BBC Model B. At least he doesn't walk around in female nightwear.

Nigel Hawthorne, Glastonbury.

## WHERE ARE THEY NOW?

As a relatively new owner of an Amiga, could you please advise me where I can buy a copies of old classic games, such as *Elite* and *Marble Madness*? I have read countless articles which make reference to them, but can find them nowhere.

JP Moore, York.

I've had a scan through the small ads, but as you say, no-one lists either *Elite* or *Marble Madness*. That's not to say that no-one's got a copy gathering dust on the stockroom shelf, so it's worth giving our advertisers a call. I'm sure they've both appeared on compilations too, which should make your search a bit easier. Can't for the life of me remember which compilations though!

## A NUTTER WRITES...

Once upon a time, far far away in a land called Nyiviti, there was much anguish among the people. 'Why do we have to toil so hard to receive dreams from the Dream-Maker?' they wailed... (some time and many words later)...blah blah blah...What do you think this is, Fantasyland? Sinnick the Pessi-Mystic, The Flood Plains of Kempston.

Mind-numbingly tedious as your 'story' is (we've spared you readers the yawn-inducing details), I'm inclined to agree with your long-made point, that even if piracy of computer games was wiped out, prices wouldn't come down. Just look at the console market: almost zero piracy, yet the carts are even more expensive than most Amiga games.

## ANABEL CROFT SIMULATOR

I've been a closet fan of Channel Four's *Treasure Hunt* program for years. The witty banter and dry humour of Kenneth Kendal and

Wincy Willis always manages to keep the program bubbling along, despite those stupid Terry and June lookalike contestants. The icing on the cake used to be Anneka Rice, she of the much-televised rear-end. But it's only been since Anabel Croft took over the hot seat that the show has really come alive.

The point of my letter is, what about a *Treasure Hunt* game for the Amiga? Imagine it: you could solve the puzzles, then go haring around the countryside getting lifts off friendly local bobbies, and finish off the game with a frantic shrieking match as you run around looking for the last piece of 'treasure', yelling at a team of Morris dancers who seem to have taken an oath of silence. It would of course, require a 3rd-person 3D perspective view of the central character (as in *Outrun*), and it could have a simultaneous two-player mode, in which the second player could control Kenneth Kendal,

## AMIGA IS CRAP!

I'm just writing to say that the PC is far better than the Amiga, and anyone who disagrees is a complete lemonhead.

J Cartwright, Middlesborough.

## PC IS CRAP!

In response to J Cartwright's letter (Backchat, November 92), I'd just like to say that the Amiga is better than the PC any day, and anyone who disagrees is a complete bananahead.

I Borem, Macclesfield.

Right, that's this month's PC vs Amiga debate over with. And these two were probably the most constructive!

and someone could be Wincey, plotting the course on the weather map via modem. How about it Ocean, US Gold and co.?

Ian Shanley, Brighton.

Sorry to disappoint you Ian, but *Treasure Hunt* has already been converted to a computer game, by a company called Macsen some years ago, and Ms Croft was nowhere to be seen. Macsen seem to have disappeared, so it looks like a future Amiga version is out of the question.

## CU WHO?

I've been reading your mag since I got my Amiga about a year ago. One thing puzzles me though: what does 'CU' mean when it's at home? Perhaps it's some half-baked attempt to appeal to Viz readers, by putting a swear word on the cover, but you lost your bottle halfway through? Maybe it's a subtle 'joke', and should be pronounced 'See you', as in 'See you later', perhaps a reference to its diminishing size on the cover each month? So come on, out with it, what's it all about?

Alan Dean, London.

It actually stands for 'Chocolate-flavoured Underside', referring to

course to the back cover, which tastes of chocolate (when left on a chocolatey surface for some time).

There are those however, who claim it stems back to the days when the mag was called *Commodore User*, and mainly covered the C64. As if!

## VTDC

Let me first congratulate you on the great Multimedia feature in the October issue. However, isn't it a bit backward of Commodore to try selling the CDTV without a keyboard? I went and had a go on one in Dixons, and it was like trying to drive a car without pedals or a steering wheel!

What is the point of splashing out all that dosh on a computer when you can't even work it properly? Software on consoles is written specifically for machines without keyboards, so it's not a problem, but what happens when you boot up your CDTV and click on the CLI

your readers, possibly very costly mistakes such as this.

Paul Sewter, Norfolk.

The comment about taking a scanner down to the library was actually referring to copyright-free photo collections, not just any old book with a nice picture in it. If you think any of your work is worth someone scanning into their newsletter or DTP document, why not release your own set of clip art?

## AMOS ROMS

I'm fairly new to the Amiga, having bought my A500 Plus about six months ago. After being used to my Spectrum, the Amiga is stunning, except for one thing: the BASIC, or rather the lack of it.

Why couldn't Commodore put BASIC in ROM, just like they used to with the C64, Spectrum and so on? Then you could just turn on, and start tinkering about. Instead you've got to buy something like AMOS, and then load that in from disk. I think it's time Commodore looked at putting AMOS, or some similar language, on ROM. Surely that would get more schools interested, and then the kids would be more inclined to buy an Amiga to use at home.

Nick Windslow, Portsmouth.

## KEYBOARD QUIZ

After having a 48K Spectrum for five years, I decided to buy an Amiga 500. Although I'm very pleased with my computer, there's one thing that annoys me. Why do programmers make their games joystick controlled only, instead of giving you the option to use the keyboard as well? This seems daft because:

(a) Some games are easier to play on the keyboard, especially games where precise movement is needed.

(b) If your joystick breaks, then you're stuck, but if more games allowed you to use the keyboard, you could still play them until you had replaced your joystick.

(c) It can't be that hard to program keyboard controls into a game. It's done on Spectrum games all the time.

Robert Moseley, Cardiff.

There's no technical stumbling block that stops programmers implementing keyboard controls, it's just that they expect everyone to prefer joystick control.

### Educational Adventure Games.

Written by experienced teachers, suitable for ages 5-13.  
Highly recommended by educational writers in leading Amiga magazines. Trade enquires welcome.

Would you like to see your children use the computer for something other than shoot'em-ups?  
Would you like them to use more than four keys and a joystick?

Do they get fed up with being killed off while trying to work out which button does what?  
Yes? The Coombe Valley software may have what you are looking for.

We aim to produce adventure games which have a genuine educational content and which will keep a child interested for hours rather than minutes. All of our adventures are fully illustrated. Most can be played at many levels and all of them have random factors built in so that they are different each time they are played. They can be completed by using about twenty words, but many more are understood so that if a child wishes to explore them just about everything that is mentioned or is shown in a picture can be investigated.

For further information, please send SAE. Send 50p OR blank for demos.  
**Coombe Valley Software. 18 Nelson Close, Teignmouth, Devon, TQ14 9NH.**  
Tel: 0626 779695 24 hrs.

### Maths Dragons. Ages 5 - 12+

Designed to give practice in the four rules of number. Sum type and degree of difficulty can be selected. Set in the caverns of the Maths Dragons, you must rescue the scattered pieces of your train set from the attentions of the baby dragons.

### Tidy The House. Ages 5 - 9

A first adventure game set in the familiar territory of an untidy house, where the player usages their younger brother and sister ready to go out and do a bit of tidy up at the same time. The game helps develop reading and keyboard skills, plus logical thought and planning.

### Cave Maze. Ages 8 - 13

A first adventure for a slightly older age range. You have befriended a lost, hungry and slightly, awkward, baby dragon. All you have to do now is to find his lunch box, feed him and then guide him home passed the obstacles in amaze of caverns. The game helps develop reading and keyboard skills plus logical thought and planning.

### Reasoning With Trolls. Ages 5 - 12

You play the part of the Smallest Billy Goat Gruff, who wants to get to the other side of the river where the grass is greener. In order to get there you must cross a number of bridges, each with a resident troll, safe passage will depend on your answers to set a of graded, reasoning questions.

### Fractions Goblins. Ages 8 - 13+

A game which gives practice in fractions. Any or all of the rules of number can be selected, as can the difficulty level and type of fraction. The smallest level will allow the most hesitant novice to succeed while the hardest will probably require pencil and paper and no matter how good you are.

### Picture Fractions. Ages 7 - 10

This game is designed for those who have just started fraction work, and who are not yet ready to deal with them in purely numerical form. Questions are presented in the form of pictures from which the player must work out a fraction and then answer in either word or number form.

## WING-BACKS IN A SOCCER MANAGEMENT GAME

# SOCCER SUPREMO

### AN INTERNATIONAL MANAGEMENT GAME

Yet another England manager has learnt the hard way that controlling an international squad is a very different ballgame to club management. Every match is a cup-tie and every team - selection and result - is picked apart by a voracious press. The pressure to succeed is incredible.

**Soccer Supremo** puts you in charge of a European national squad preparing for the European Nations Cup qualifiers. You have an initial four year contract, that may be extended to six or eight years, or reduced to two, as the results dictate. You'll be expected to qualify for the Finals, then put up a show against the best European teams, but this is just preparation for the big one: The World Cup!

**Customisation.** The game will allow you to take the European nation of your choice and you will be allocated an initial squad of 16 players. You can introduce a further 34 players, making 50 in all, whose names and skills (but not levels) You can define yourself. These players are introduced gradually as you discover the weaknesses in your squad and also to create the balance of skills that match your style of play. The original 16 players can be defined in the same way using the EDIT program (free with the game) if you wish as well as the teams that will make up the opposition.

In the traditional number-juggling soccer management game wing-backs, sweepers, formations, styles, tactics are, at best, cosmetic, at worst, meaningless. The unique match simulation at the heart of Soccer Supremo restores all these and more, allowing genuine control over team performance. In addition to the visual feedback on your team, this match allows substitutions, tactical positional changes and workrate instructions to individual players which then influence the flow of the match. The increased realism and control transforms the supreme, but childish, gameplay of the traditional game into a compulsive simulation.

Headcoach V3 has been described as "the best game ever put onto a computer". It is the complete American Football game, a multi season epic with the very best strategic elements of the real thing. You will call the plays, devise the gameplans and develop the team. Use the first season (2 pre-season games, 16 regular season games, and the play-offs) to discover your 45 man squad of players. Then exploit the college draft to improve the team and expand your game play to beat the very best the NFL can throw at you.

56 Screens of stats are available to help you to judge your players and team performances.

Players will age and teams will fade (a player will last about 6 seasons), but you will stay and rebuild...

# HEAD COACH V3

"From my point of view, the game has kept me sitting up at nights through holidays and weekends for up to 12 hours at a stretch, with miniscule breaks for food and other necessities.....It is a game I have no hesitation in recommending to anyone with even the slightest interest in American Football"

# THE DEADLY RETURN OF... THE NEXT MONTH PAGE

## THRILL!

As the CU Amiga team get dressed up in their moth-eaten and distinctly smelly dinner jackets to present the awesome, the awe-inspiring, the anecdotal (and that's just the 'A's) Fat Agnus Awards 1992. Who'll be the winners and who'll be the losers in these prestigious annual awards? Find out in just 30 days time.

## RECOIL IN TERROR!

As the tech team subject software and hardware to ever-more gruelling benchtests. Team leader, Nick Veitch, will be on hand to offer his expert opinion on all the latest productivity releases, as will his band of hand-picked specialist reviewers. We'll have a massive preview section of upcoming Amigaware, as well as a follow-up feature on both the A4000 and the A1200. We've now had the machines for a couple of months, so we reassess our first impressions of the new generation Amigas.

## BE AMAZED!

At our free 32-page Beginner's Guide To The Amiga. Everything you want to know about the most versatile home computer will be on offer, written by our very own technical editor, Nick Veitch. Step-by-step tutorials will take you through the most important functions of Workbench. There will also be comprehensive buyer's guides.

## ASTOUND YOUR FRIENDS!

Over the years, CU Amiga has built up a reputation for unequalled game reviews and 1993 will carry on that tradition. We'll be presenting a round-up of all the top games that will be coming your way in the New Year as well as reviewing all the latest games. And, while we're at it, our hints and tips section will get a much needed shot in the arm and will be radically revamped to help you get even more enjoyment out of your games.

## RUN FOR YOUR LIVES!

There'll be two value-for-money disks attached to the cover, stuffed with all manner of commercial utilities, demos and full-length games. Our January coverdisks should prove to be something very special indeed. We've teamed up with two prestigious software houses to bring you the best demos of the year. On the commercial utility front, we've just signed up a superb program that every Amiga owner will want to possess. What is it? We're not telling – you'll just have to join us next month when we'll reveal all.

inal Copy II encompasses a whole range of other advanced features, here's just a selection:

- ◆ Uses the latest Workbench 2 Style interface on all Amigas
- ◆ On screen command ribbon controls (format your document with the simple touch of a button)
- ◆ 25% to 400% editable page reduction and magnification command
- ◆ Title page, master pages & style sheets
- ◆ Right/left pages with binding offset
- ◆ Open multiple documents
- ◆ Fast mouse document panning and zoom/un-zoom
- ◆ External and internal mail merging
- ◆ Cut, copy and paste
- ◆ Search and replace
- ◆ Onscreen maths
- ◆ Auto-hyphenation
- ◆ Import, resize and crop IFF, HAM and 24Bit ILBM graphics and auto-flow text around them
- ◆ Text over graphics
- ◆ Outline fonts on all Amiga screens, and any non-Postscript™ or Postscript™ compatible printer
- ◆ 4 point up to 300 point [over 4" high] smooth text printing
- ◆ Text leading and spacing controls
- ◆ Condensed and expanded characters
- ◆ Positive and negative obliquing
- ◆ Background printing, allowing simultaneous editing & printing of two or more documents
- ◆ Fast proof printing facility
- ◆ Comprehensive range of additional attractive font volumes available.

ANIMATION

### Real Time Digital Effects

#### OVERVIEW

**MEGAMIX master** is a high specification, low cost digital effects cartridge that plugs into your printer port. Special stereo effects such as echo can be added in real time. You will find Megamix Master's performance and ease of use unmatched by any rival. Just plug it in and go...

#### Some of the Features include:

- \* Thru port for printer or digitiser.
- \* Fully multi-tasking.
- \* Integrated 3.5mm jack plug and lead.
- \* 3D Animated icons.
- \* Compatible with Workbench 2.0.
- \* Both Mono and Stereo sampling.

#### Real Time Digital Effects include:

**ECHO**-Adds echo to incoming sound.  
**PHASER**-Applies space age phase shift.  
**SYNTH**-Adds user definable effects.  
**DIRECT**-Plays incoming sound direct.  
**VIBRATO**-Rapidly varies frequency.  
**STEREO ECHO**-Adds digital delay between L & R speakers.

#### Other Menu's include:

**REMIX** (with many sampling features).  
**EDIT** (for sample manipulation).  
**DISK** (for saving and loading etc).

Workbench 2.00 Compatible.

**£39.95 Inc.**

JUST LOOK AT THE SPEC.

### 4096 Colour Images

#### OVERVIEW

**Vidi-Amiga 12** is the ultimate low cost colour digitiser for Amiga. There are no filters and no separate RGB splitter. Colour images can be captured in less than a second, mono images are grabbed in real time. Fully compatible with any video source.

#### Some of the features include:

- \* Multi-tasking software.
- \* Advanced error diffusion stippling.
- \* Cut and Paste with masking.
- \* Capture into a user definable window.
- \* Load and save IFF ILBM and ANIM files.
- \* Grab frames flipped on a X or Y axis.
- \* Multi frame store with animated playback.
- \* Composite or S-Video input.

#### Display in the following resolutions:

PAL	NTSC
320 x 256	320 x 200
320 x 512	320 x 400
640 x 256	640 x 200
640 x 512	640 x 400

#### Supports several screen modes:

- \* 4096 HAM mode.
- \* 64 EHB mode.
- \* 32 colours.
- \* 16 colours.
- \* 16/8/4/2 shade mono.
- \* 262000 HAM-E mode.
- \* 256 colour EREG mode.
- \* Overscan/Interlace/Hi-Res.

#### Image Processing and Enhancement:

Sharpen/Smooth/Negative/Quantise  
Thresholding/Solarization/Mosaic  
Edge Detection/Brush selected area.

Workbench 2.00 Compatible.

### Professional Animation with Optional Image Capture

#### OVERVIEW

**Take 2**, as used in "Rofls Cartoon Club" is the ultimate multi-level animation package. Offering up to 4 levels of animation and 4 levels of sound. Images are drawn within your favourite art package then loaded into Take 2 as IFF files. If you own Vidi-Amiga you can digitise your drawings from within Take 2. We believe its much easier to draw with a pencil than with a mouse.

#### Some of the features include:

- \* Compatibility with all Amigas.
- \* Supports 2, 4, 8, 16 and HAM colour.
- \* Loads or saves IFF or ANIM files.
- \* Traditional animators dope sheet.
- \* Play back up to 25 frames per second.
- \* Dubbing or simulated onion skin.

and lots more !!!

#### Applications:

- \* Traditional animation.
- \* Storyboards.
- \* Product presentation.
- \* Line tester.
- \* Stop frame animation.
- \* Cartoon productions.
- \* Education.
- \* 3D object animation.
- \* Video production.

Workbench 2.00 Compatible.

# WHO CAN SAVE CIVILIZATION FROM THE MOST DESTRUCTIVE FORCE ON EARTH?

A few thousand years ago, Atlantis sank to the ocean floor. With it sank the secret of the most destructive force on earth. But the Nazis have rediscovered the lost Kingdom, and they'll soon have a bomb which can end World War II in fifteen minutes. Unless Indiana Jones gets in their way...

- Control two characters - Indy himself and his capable sidekick Sophia.
- Whips, weapons, fistfights, gambling and puzzles.
- Dazzling 3D isometric world - click from one camera angle to the next.
- Awesome animation, music and sound effects.
- 9 lavishly - detailed action-packed locations.

Available on:  
Amstrad, C64 Cassette & Disk, Spectrum, Cassette, Atari ST, Amiga & PC and Compatibles.

Break the bank in Monte Carlo - and buy a bundle of clues and weapons.

Borrow the keys to Adolf's submarine and take it for a ride.

Drop by the local watering hole for a friendly game of darts.

Screen shots are only intended to be illustrative of the gameplay and not the screen graphics which may vary considerably between different formats in quality and appearance and are subject to the computer specifications.

# GAMES GUIDE

Monkey Island 2

Future Wars

Robocod

Barbarian

*The Amiga began life primarily as a games machine and that's what it's still best known as. Nowhere else can you find such a rich variety of games. Over the following pages, we're going to be taking a look at some of the best Amiga games on offer and giving our expert opinion about which titles represent the best buys...*

## ED FIRST

Welcome to the second Amiga Guide, free with the December issue of CU Amiga. Over the coming months, Amiga Guide will cover every aspect of the Amiga, from programming, graphics and animation to music, video and desktop publishing. Each free magazine will cover a distinct topic, building up into one of the most complete guides to the Amiga ever published.

Last month we took a look at public domain software. This month it's the turn of Amiga games and next month we'll be presenting a 32-page Beginner's Guide. And all at no extra cost!

It's hoped that you'll enjoy these guides and get a lot out of them. Initial reaction to the first guide has been incredibly favourable, but if you've any suggestions to make things even better, then please drop me a line at the editorial address.

Dan Slingsby, Editor.

## GAMES PEOPLE PLAY

Quality is a nebulous concept. What's one man's meat is almost certain to be another's poison. And nowhere is this more true than in the prodigious world of Amiga games software. Take Dino Dini's *Kick Off 2*, for instance. Many people consider it to be the best football game ever to grace a home computer, whereas others find it almost unplayable and prefer the simplicity of, say, *Sensible Soccer*. Then there are other alternatives such as *Striker* and *Man Utd Europe* to consider.

What I'm trying to get at is that everyone has an opinion and it's very rare indeed to find two people whose tastes exactly coincide. And that's been the problem we've had when compiling this special games guide. It was almost impossible to agree on any form of top 100 guide, so we decided to take a more sensible route and take a look at specific game genres. We've listed what we consider to be the top games from each category as well as some of the also-rans. We're not claiming that these lists are comprehensive. They're not meant to be. But hopefully, they'll point you in the right direction if you're thinking of testing the waters in any particular category. After all, with the average game costing £26, buying a duff game can be an expensive mistake.

#### 4 ADVENTURE GAMES

Adventure games were catapulted into a completely new dimension when the first graphic adventure made its debut. Today, adventure games are one of the top selling genres with the likes of *Monkey Island*, *Another World* and the *Ultima* series swelling their ranks.

#### 6 PLATFORM GAMES

Hopping from one platform to another might not sound like a recipe for a staggeringly successful game, but there's no doubting the inventiveness of some of the top games in this genre.

#### 9 SOCCER SIMS

Everyone loves a good kickabout and the Amiga is blessed with three of the best in the form of *Kick Off 2*, *Striker* and *Sensible Soccer*. Which do we rate the best, find out on page nine.

#### 10 SHOOT 'EM UPS

Ever since *Space Invaders* made its debut all those years ago, shoot 'em ups have been a staple diet of any gamer's collection. Now more popular than ever, the choice is staggering...

#### 13 BEAT 'EM UPS

There's nothing like a bit of mindless violence to relieve the stresses of everyday life. Although the genre has been a bit quiet of late, there's still plenty of quality titles available to help you slug it out.

#### 14 THE NAME GAME

A famous name is one way of selling a game, even if the actual gameplay is a load of dingo's kidneys. Despite this reputation there have been a few licensed games that have bucked the trend.

#### 16 ROLE-PLAYING GAMES

Charging around a load of dimly-lit dungeons with a group of blood-thirsty adventurers encountering dozens of demons, trolls and skeletal warriors doesn't sound like my idea of fun, but Role-Playing games are still immensely popular. Find out which ones we consider to be essential purchases on page sixteen.

#### 18 GOD SIMS

If you've always wanted to become supreme ruler of all that you survey, then now's your chance. God sims let you take control of an entire city, country or even planet in pursuit of your megalomania.

#### 20 ARCADE CONVERSIONS

From *Rainbow Island* to *Street Fighter 2*, the Amiga has played host to some of the finest coin-op conversions of any machine. Check out which ones we consider make the grade.

#### 22 STRATEGY GAMES

Brain replaces brawn in the cerebral world of strategy games. Whether its creating a planet, building a railway company up from scratch or stirring up trouble in far away countries, there's surely something of interest here for everyone.

#### 22 MILITARY SIMS

If you've always wanted to dress up in tight fitting uniforms, wear knee high leather boots and goose-step about the place, here's your chance as we review the best military sims available.

Moonstone

#### 24 WAR GAMES

Pit your wits against the most devious computer opponents known to man as your armies attempt to blow away the opposition before they blow away you.

#### 26 FLIGHT SIMS

A deadly array of some of the world's top fighters are at your disposal when you load up some of the impressive flight sims available for the Amiga.

#### 28 SPORTS

Sports sims are one of the oldest game genres and offer the player the chance to try their hand at anything from squash and baseball to golf and deadly future sports.

#### 30 BUDGET RELEASES

If money's too tight to mention, then why not try some of the excellent budget releases that often cost less than a tenner?!

# ADVENTURE GAMES

*Adventure games still have a slight spectacle and anorak image, which is completely inaccurate. The last few years have seen a revolution in controls and graphics, and now some of the best Amiga games fall into this category. No longer a load of old balrogs, check out some of the largest, most taxing and humorous games around.*

*Monkey 2 is definitely a classic of its genre. Worth £35 of anybody's money.*

## THE SECRET OF MONKEY ISLAND 2 US Gold £34.99

With their follow-up to the award-winning *Secret Of Monkey Island*, Lucasfilm have introduced an improved control system, more jokes and many of the cast that made the first game such a hit.

The plot is superb. No longer can the hero Guybrush amuse and win friends with tales about how he defeated pirate LeChuck, so he sets out on a new quest. The first part of the game starts with flashbacks, as Guybrush is left literally hanging around. This is a little

## ANOTHER WORLD US GOLD £25.99

It's hard to define this game exactly, so we've classed it as an arcade adventure.

It starts with you sitting at the controls of your particle accelerator, as you do after a hard day's work. You hit the button to run the test then what happens? The building gets struck by lightning. That, coupled with the experiment, teleports you to an alien planet. Tsk, should have opted for a quiet night in front of Eldorado.

The game is completely joystick controlled, although you don't get much time to practice. You start off underwater, and when you've learnt how to swim you find yourself on a seemingly desolate planet, with only a few stinging slug creatures for company. That is until you find the large, black lion-type beast. Escaping from it is the next task on the agenda. This serves as a good introduction to the precise timing the game requires throughout.

What makes this game really special are the graphics. They look like a combination of traditional sprites and polygons, which gives the game a nice feel. Every time a major event occurs you're treated to a short animated sequence which really enhances the atmosphere.

*Another World* suffers from being a little easy to complete, but the overall effect of the game is so spectacular that it's worth playing over and over again.

disconcerting, as you're actually playing the game up to the point it starts, so to speak, so you have to get him into this situation.

But apart from all that, what really makes this game special is the humour. Throughout you come across characters who are out to brighten your day, sometimes with swords.

The control system is fantastically easy to get to grips with. To move Guybrush you simply point and click on where you want him to go, then he'll do his best to get there. There's a list of commands at the bottom of the screen that can be highlighted then applied to an item or character. Communicating is also made easy. To respond to a character you simply select one of the phrases that crop up in the dialogue window. Usually there's one key sensible statement that will earn you the information you're after, but it's always tempting to select the corny jokes to see what will happen.

The sheer size of this game is illustrated by the 11 disks it comes on. Don't be alarmed, though, there's actually very little disk swapping involved.

One of the best and, without a doubt, the funniest Amiga adventures ever.

### FUTURE WARS ▲

US Gold £25.99

This forerunner to *Another World* has the same out-of-place hero plot, although this time you play a 21st century window cleaner sent

back to medieval times. Once there you find out that the daughter of a local duke has been kidnapped and that there's a substantial reward for anyone who can rescue her. Being a noble type you take on this challenge. Succeed in that and you uncover a bunch of humans who explain that the Earth of the future has been taken over by aliens and could you see your way to doing something about it? So from Middle Ages Britain, you're transported to a desolate wasteland where what's left of the world's future lies in your janitorial hands.

The game uses the now familiar point and click system, although it wasn't so common when it was first released. One small criticism is that many key objects in the game are so tiny it's very easy to overlook them, so keep your eyes peeled when you play this.

*Future Wars* is one of the classic adventures from the Amiga's huge back catalogue. It features liberal amounts of humour mixed with the occasional brain-numbing problem to create a game which is taxing without ever being frustrating.

### The Adventurers

#### THE HITCH-HIKERS GUIDE TO THE GALAXY

Mastertronic £9.99

This is one of the almost extinct breed of text adventures. Which isn't a bad thing when you look at the graphic-driven titles such as *Monkey Island* which helped nail the coffin shut.

As you may have gathered from the title, the game is based around the Douglas Adams book of the same name. You play Arthur Dent, ape descendent and one of the only two remaining members of the human race, which came to an abrupt end when the Earth was destroyed to make way for a hyperspace by-pass. Fans of the book will be pleased to know that one of the very first problems is to get the ship's vending machine to make a cup of tea.

Don't be put off by the lack of graphics, what lies beneath the reams of text is a hugely funny and very, very taxing adventure.

#### RISE OF THE DRAGON

Sierra £39.99

The impression you get when you play this game is that the author was definitely a fan of *Blade Runner*.

It's set in the California of the future and all is not well. A group of terrorists are threatening to destroy the entire state if their demands are not met. Enter you, saviour of the surf-culture and all other west-coast inhabitants.

This game has loads of neat features. There are video phones where you can see the people you're communicating with, arcade sequences which spice the game up even more and plenty of animated scenes to update you on happenings elsewhere in the game. A great adventure for SF buffs.

#### ULTIMA VI

Mindscape £30.99

The latest instalment in Lord British's *Ultima* series once again finds the realm of Britannia under threat from dark forces. Like most *Ultima* games you're thrown in at the deep end, with very little idea what's going on, where you are or what the hell you're supposed to be doing.

There are many features common to the earlier *Ultima* games, although they are now much more refined, especially the magic system which is one of the most comprehensive you'll find in any game. It's also rather big, with a cast of hundreds dotted around several thousand locations. If you're after a lasting challenge, look no further.

#### THE SECRET OF MONKEY ISLAND

US Gold £34.99

If you've got the second game and not this one, you're missing out on a great game.

While not quite as good as its descendent, the original *Monkey Island* is still good enough to knock most adventures for six. Here we find Guybrush on a quest to become a pirate, although he starts about it in entirely the wrong way.

### LOOM US Gold £25.99

From the creators of *Monkey Island* comes another point 'n' click adventure laced with typically American humour.

It's set in a village where music is used to cast spells and everything is generally rather nice, until someone kidnaps all the people.

The only person to escape is Bobbin Threadbare, as he was skiving off work. And so the responsibility of finding these good folk and defeating whatever took them in the first place lies squarely on his shoulders. Bobbin is only an apprentice weaver (a kind of musical, loom-working spell caster) so he's not very good with magic. So before he sets out to rescue anybody he has to acquire some spells. This stage of the game is a good introduction to the land where it's set, and it lulls you into a false sense of security as you hit the first real problem, a gigantic water spout blocking your progress across the sea.

This is a typical Lucasarts game. The graphics are great, if a little too cute at times. Naturally, there's plenty of humour, although to begin with there aren't exactly many people to converse with, so you have to rely on Bobbin's witterings to keep you amused.

This is a perfect game for adventure novices, but if you can complete either of the *Monkey Island* games you might find *Loom* a little easy going.

# PLATFORM GAMES

A platform game is quite simply a game with platforms in it. No less, and very occasionally nothing more. The breed grew from small roots, namely a timeless ZX Spectrum classic called *Manic Miner*, and since then has blossomed and borne more fruit than any other genre. Here's the lowdown on the best around.

## ROBOCOD Millennium £25.99 ▲

First, there was James Pond – Underwater Agent. Now, there's Robocod. Part fish, part machine, Robo is here to save the world from certain destruction from a global threat that goes by the name of Dr. Maybe. This foul fiend has kidnapped Father Christmas, and is planning to take over the world by disguising bombs as toy penguins. You have to enter Santa's tower, diffuse all the bombs and destroy Dr. Maybe himself.

Robo can run and jump with very little effort. However, there are two key aspects that separate this fish from the buoys in blue (groan). Firstly, he can use the weight of his armoured suit as a weapon, leaping upon the enemy to squash them into submission, and secondly he can stretch his upper body away from his lower parts, to reach higher platforms, from which he can hang and then monkey climb himself out of danger.

The game itself is very similar in feel to the Nintendo classic *Super Mario Brothers*, and that is its strongest point. The graphics are cute and entertaining, and the sound is just on the right side of irritating, but it's nice to see that the emphasis has been put on gameplay. *Robocod* is instantly enjoyable, with just the right level of difficulty. Seriously addictive stuff.

## ZOOL Gremlin £25.99

With all the hype surrounding SEGA's *Sonic the Hedgehog*, surely it was only a matter of time before someone came up with some serious opposition. 'Bad News For Hedgehogs' claimed the headlines on the advertisements, T-Shirts, Mugs, tea cosies etc. Gremlin spent a long time writing this game and although it's not perfect, it's a good example of the genre.

*Zool* is an intergalactic space ninja, who has got lost after a particularly busy day dimension jumping. All you have to do is get him home. Naturally, you have to fight your way through some tortuous levels, do battle with all sorts of indescribable nasties and collect stacks of bonus points along the way, but it's all in the name of fun, isn't it?!

From the moment you open the box, you can tell that *Zool* is something special. For a change, it's a game developed specifically for the Amiga, so you're looking at the best the machine can do.

This highly playable little game, once you get used to the controls that is. Like most console games, there are quite a few moves the main character can pull off, and console owners are lucky enough to be endowed with multiple fire buttons. As *Zool* can run, punch, kick, slide, spin

and fire a gun, there are quite a few joystick tricks to learn, making the game just that little bit tricky to begin with, but once you've played it for twenty minutes, it becomes second nature and the game really comes into its own.

Maze-like levels ensure that even if you find it easy to move about, you won't always find it easy to get out. A well-thought out game, and one to make your console-owning friends jealous.

## RAINBOW ISLANDS

Hit Squad £7.99

*Rainbow Islands* in its original form was the second in a triad of Taito coin-ops, starting with the classic *Bubble Bobble* where you and a friend in the guise of small dragons had to catch the enemy in spit bubbles, and then burst them to wipe them out of existence. *Rainbow Islands* keeps a similar theme, only this time you (and the optional friend) are small children, and the bubbles have been replaced with rainbows.

The story takes you over seven different worlds, each broken into four vertically-scrolling levels. The aim of each is the same: start at the bottom and get to the top before the island floods (i.e. before you run out of time!). Fail to get to your destination, and it's curtains. Need we say more?

Each of the levels follows a different theme, and each involves different strategies. For example, War World has a lot of armed mobile units, so as well as the enemy themselves, you've got lots of enemy fire to avoid. On the other hand, Horror World has fast moving ghosts that home in on you, so the enemy are harder to avoid than usual.

As I've already said, your main weapon is your rainbow, and what a versatile little tool it is. Basically, it has three main uses. Firstly, if you aim it right, you can hit a nasty as you fire it. Secondly, you can trap bad guys under it, and then jump through it to burst it, as with the bubbles of its predecessor. Thirdly, it can be used as a stepping stone to climb the levels. But that isn't all.

By collecting the tokens that litter the play area, you can expand your rainbow to three times its normal length, as well as speed up the drawing time. The end result is the kind of destructive power usually reserved for a good Chuck Norris flick.

*Rainbow Islands* is generally regarded as one of the best arcade conversions of all time. In effect, it's so close to the original that it plays exactly the same way: if you can finish the arcade machine on 20p, you'll have no problem with this. Responsive controls, arcade perfect graphics. One of the best platform games ever, no question.

## PUTTY

System 3 £25.99

System 3's reputation was built with more strategic titles than this, such as *The Last Ninja*, but it's nice to see the company trying their hand at different genres. *Putty* is about a small blob of putty who has been banished from Putty Moon by an evil tyrant wizard and focuses on his ensuing attempts to get home. A very silly plot, you must agree, but then again, *Putty* isn't the most serious of games.

The most striking aspects of the game are the amounts of warped imagination that has gone into designing it, plus the stacks of graphic and sonic thrills thrown in. All the way through the game, there isn't a square inch of screen that doesn't have something manic in it, from the Terminator carrots who cry 'Uzi nine centimetre' before opening fire, to the Uncle Ted bonus – a pub pianist who comes on screen when you collect a specific token, and plays for thirty seconds, stopping all bad guys in their tracks as they can't help but boogie.

Putty, like the toy of the same name, can do a hell of a lot. He can walk around, leap all over the place, lie flat, stretch between platforms, eat bad guys, even explode himself to kill everything on screen at once. It might seem like a lot, but because of the way the game is laid out, you're going to need it all.

*Putty* shows just how good an original game can be. If you want a red hot platform game that's going to raise a few laughs, then this is the one to get.

## On A Different Level

RODLAND

Sales Curve £25.99

A very addictive version of the popular coin-op, *Rodland* is based in a land where fairies are real. Sickeningly cute graphics, cuddly enemies and harmless looking weapons disguise a game that involves hitting seals, grabbing them by their heads, and then smashing them repeatedly on the ground. Great fun.

CHUCK ROCK

Core £25.99

Core's first platform game for themselves, and they continue to prove that they have very little difficulty in matching the best of the rest. An amusing romp about a caveman with a beer gut, who smashes his way across some dangerous prehistoric backdrops. Good graphics, wicked gameplay.

RICK DANGEROUS 2

Microprose £25.99

Sequel to the highly acclaimed *RD1*, this time Rick's in slightly more futuristic surroundings. Designed and coded by Core, then just a development house, the puzzle elements of each level are what make it such fun to play. A little blasting accompanies a lot of brainwork. Genius.

HARLEQUIN

Gremlin £25.99

Surreal in the extreme, *Harlequin* has you as one of those clowns in funny checked clothes, bouncing through his homeland of Chimerica, which incidentally has a broken heart which he must mend. Incredibly playable, with some breathtaking graphics, *Harlequin* is definitely one of the strangest games ever.

# PREMIER MAIL ORDER

Titles marked \* are not yet available and will be sent on day of release.

Please send cheque/PO/Access/Visa No. and expiry date to:

**Dept CU12, 10 Tinkler Side, Basildon, Essex SS14 1LE**

Please state make and model of computer when ordering. P&P inc. UK on orders over £5.00. Less than £5.00 and Europe add £1.00 per item. Elsewhere please add £2.00 per item for Airmail. These offers are available Mail Order only.

Telephone orders: Mon-Fri 9am-7pm. Saturday 10am-4pm. Fax orders: 0268 271173. Tel orders: 0268 271172

# FOOTBALL GAMES

Ever since Match Day, practically every software house there is has released a soccer title in one form or another. The reason? Who knows, other than they know that if it has 22 people knocking a ball around, it'll sell in droves. Here's what we rate as the top four kickabouts.

## KICK OFF 2 Anco £25.99

When *Kick Off* was released, the game was criticised for having sprites that were too small and an unplayable control system. Now, of course, we all know better.

Viewed from above, the game plays over an extremely fast scrolling pitch. By using an overhead system, rather than a side-on perspective, it makes it far easier to pinpoint where a ball is going to land.

Controls are simple enough, on paper. Holding and releasing the fire button at different points prompts different responses, in conjunction with changes of direction with the joystick. Holding down the fire button with the ball at your feet prepares a pass, pushing the joystick in a direction and then letting go of the button automatically passes to the nearest player in that general direction. Yes, the beauty of *Kick Off 2* is the control system. It takes quite a bit of mastering, but once you've got the knack, no one can beat you.

## SENSIBLE SOCCER Renegade £25.99

*Sensible Soccer* is based on *Kick Off*. Sensisoft make no bones about it whatsoever. Basically, they were all fans of Anco's effort, but reckoned they could do better. For the most part, the game is the same, but with a few added touches. To recap, it has the same overhead viewpoint, only this time the graphics are even smaller, leaving you with a larger view of the pitch so there's no call for a scanner. Even though the graphics are tiny, they have a lot more character than *Kick Off*. Also, whereas *KO* was restricted to straight shots and sliding tackles, *Sensisoccer* includes moves like bicycle kicks, diving headers and fully controllable set pieces.

On top of that there are full management and tactic design segments, where you can set up your entire team to play the way you want them to, from basic running around to corners and free kicks. This adds a lot to the game, and removes the feeling of being cheated by dumb computer players that most football games seem to offer.

## STRIKER Rage Software £25.99

The first thing you'll notice about *Striker* is the viewpoint. Rather than viewing the game directly from above, imagine watching the game from a roving camera, always at a fixed distance above the pitch, and always looking upfield.

The controls are easily the simplest of the lot – a step back to the early days, when all you had to do to shoot was get the bloke with the ball facing in the right direction, and press the fire button.

Forget any gung-ho, run-up-the-side-and-then-chip-it-in tactics. To win at *Striker* you're going to have to learn how to use 11 men usefully, instead of just one. The emphasis really is on teamwork. For example, if you have the ball, and one of your players is ahead of you, he will get into a sensible position to catch your pass, control will switch to the new player, and the new computer controlled player will run upfield to receive a return pass.

Visually, this is definitely the best of the bunch. The scrolling is stupendously fast, even with all detail such as stripes on the grass and the centre circle 'switched on'. Remove all the graphical thrills that might, with lesser quality code, have slowed things down, and only a golfing camera operator would be able to keep up. An excellent debut game from Rage Software.

## I'm Managing Fine, Thanks

There is another side to football games, that of the famed and much maligned management simulation. Ever since Kevin Toms wrote that wonderful (!) title *Football Manager* on a scrap of paper, softcos have been falling over themselves in an effort to create the ultimate sim.

## TRACKSUIT MANAGER Goliath Games £DELETED

*TSM* had everything a budding manager could want, with one major omission – accounts. Doug Mathews, designer, once said 'A manager should be telling the team what to do, not balance the books.' Text only, the match itself is described in a running commentary something along the lines of 'Jones passes up, but Williams receives. William runs upfield, shoots...GOAL!'. Gripping stuff.

## GRAHAM TAYLOR'S SOCCER CHALLENGE Krisalis £25.99

As with any management sim, all the standard options are included (train, buy, sell etc.), along with some rather nifty presentation. The game is run from a diary, which outlines all the fixtures for the coming year, along with training days and holidays.

After each match, you can give pep talks to your team, along with the opportunity to pass comment on the match at press conferences.

## MAN UNITED EUROPE Krisalis £25.99

*Manchester United Europe* was released to a 90% CU rating and wide critical acclaim. The Manchester team can take on the top European sides in four different competitions, including the European Cup and the Cup Winner's Cup.

Unlike the three other titles in this section, *Manchester United Europe* provides you with a Grandstand seat to view the action, giving you a more traditional side-on view of the game. At first glance, you would think that this would make

things a little difficult at times when, say, you needed to gauge where a ball was going to land. Not so, thanks to a handy shadow that appears when the ball is in full flight.

The controls are easy to get to grips with. If your player is off the ball and you press the button, he does a sliding tackle. If he's on the ball, he'll kick it. The longer you have the button pressed down, the further it'll go. Also, moving the joystick after the ball has left the player's boot allows you to add all sorts of aftertouch effects, such as banana shots and lobs.

# SHOOT 'EM UPS

*Little stirs the pulse of a games player quite like a good shoot 'em up. Be it flying through space (and it usually is!) blasting down alien spacecraft left and right, or running through a forest armed only with a far more powerful weapon than any of the opposition, quick reflexes are the order of the day. Skip a beat, and you're dead..*

## TURRICAN 2 Hit Squad £7.99 ▲

This has to be one of the highest rated shoot 'em ups ever to be featured in CU Amiga, receiving a whopping 94% back in February of 1991. It still stands up as one of the most playable games ever to appear on the Amiga. Why? Because it's very, very easy to play and there is more destruction in this game than you could ever need.

Following on a couple of years after the original *Turrican*, our hero's homeland is under attack again, this time by a giant battle computer that has gone a little haywire and wants to take over the universe planet by planet. To aid it in its task, it has created an army of battle robots, which are moving through your galaxy, wiping out and taking control as they go. Only you can stop them, of course.

Armed with a ridiculously powerful gun, it's up to you to smash the advancing alien hordes into space dust.

At first glance, the star of the show isn't all that impressive. A little guy with a little gun against an army of robots isn't exactly the fairest battle ever, so you've been graced with a few extra tricks. Pressing the space bar causes a smart bomb to wipe out all enemies on screen, pressing fire and holding the joystick down lays a mine, and just holding down the fire button ignites the flame thrower – one of the most enjoyable weapons ever seen in a game. A stream is fired out in front of you, easily covering half the width of the screen. By moving the joystick left and right, you can sweep the flame through 180 degrees from directly up to directly down, and nothing can withstand it. Sadly, you can't move while you're firing it, but you can't have everything.

As with the first game the scrolling is fast and smooth, the graphics are of a very impressive standard, and excellent use of sound effects adds real atmosphere. Intuitive controls and well thought out level design make this game as close to perfect as you can get. If you've got a vicious streak, you could do a lot worse.

## SWIV Sales Curve £25.99

*Silkworm* was a brilliant and playable conversion of an average arcade machine. On Amiga, there was something immensely satisfying about the endless destruction the game provided you with, particularly if you were the helicopter pilot. In *SWIV*, Storm took the whole idea, switched it on its head and created something spectacular.

*SWIV* is a two-player-against-the-rest-of-the-world blaster, with the human players taking control of a helicopter and a jeep. Obviously, both craft have different advantages and disadvantages.

Right from the word go, all you have to do is blast – no more no less. From the moment you start travelling up the screen, the bad guys start descending and you're lucky if you get a moment with your finger off the fire button.

There are quite a few ways in which *SWIV* stands apart from other games like this. Firstly, the speed. With a lot of clever coding, the game runs at a constant speed. Fast. Even with hundreds of bullets and enemies on screen, the game doesn't drop pace for a moment, which is good news for addicts.

Secondly, there's the length of the levels. By using their previously developed Dynamic Loading System, which loads in new areas and bad guys while the game is playing, there's no waiting between levels. Finally, there's the difficulty level. By working out how well you're playing, the computer will adjust the flow of enemies on screen to provide you with a constant challenge, one that's not too hard or too easy.

## XENON 2 Renegade £DELETED

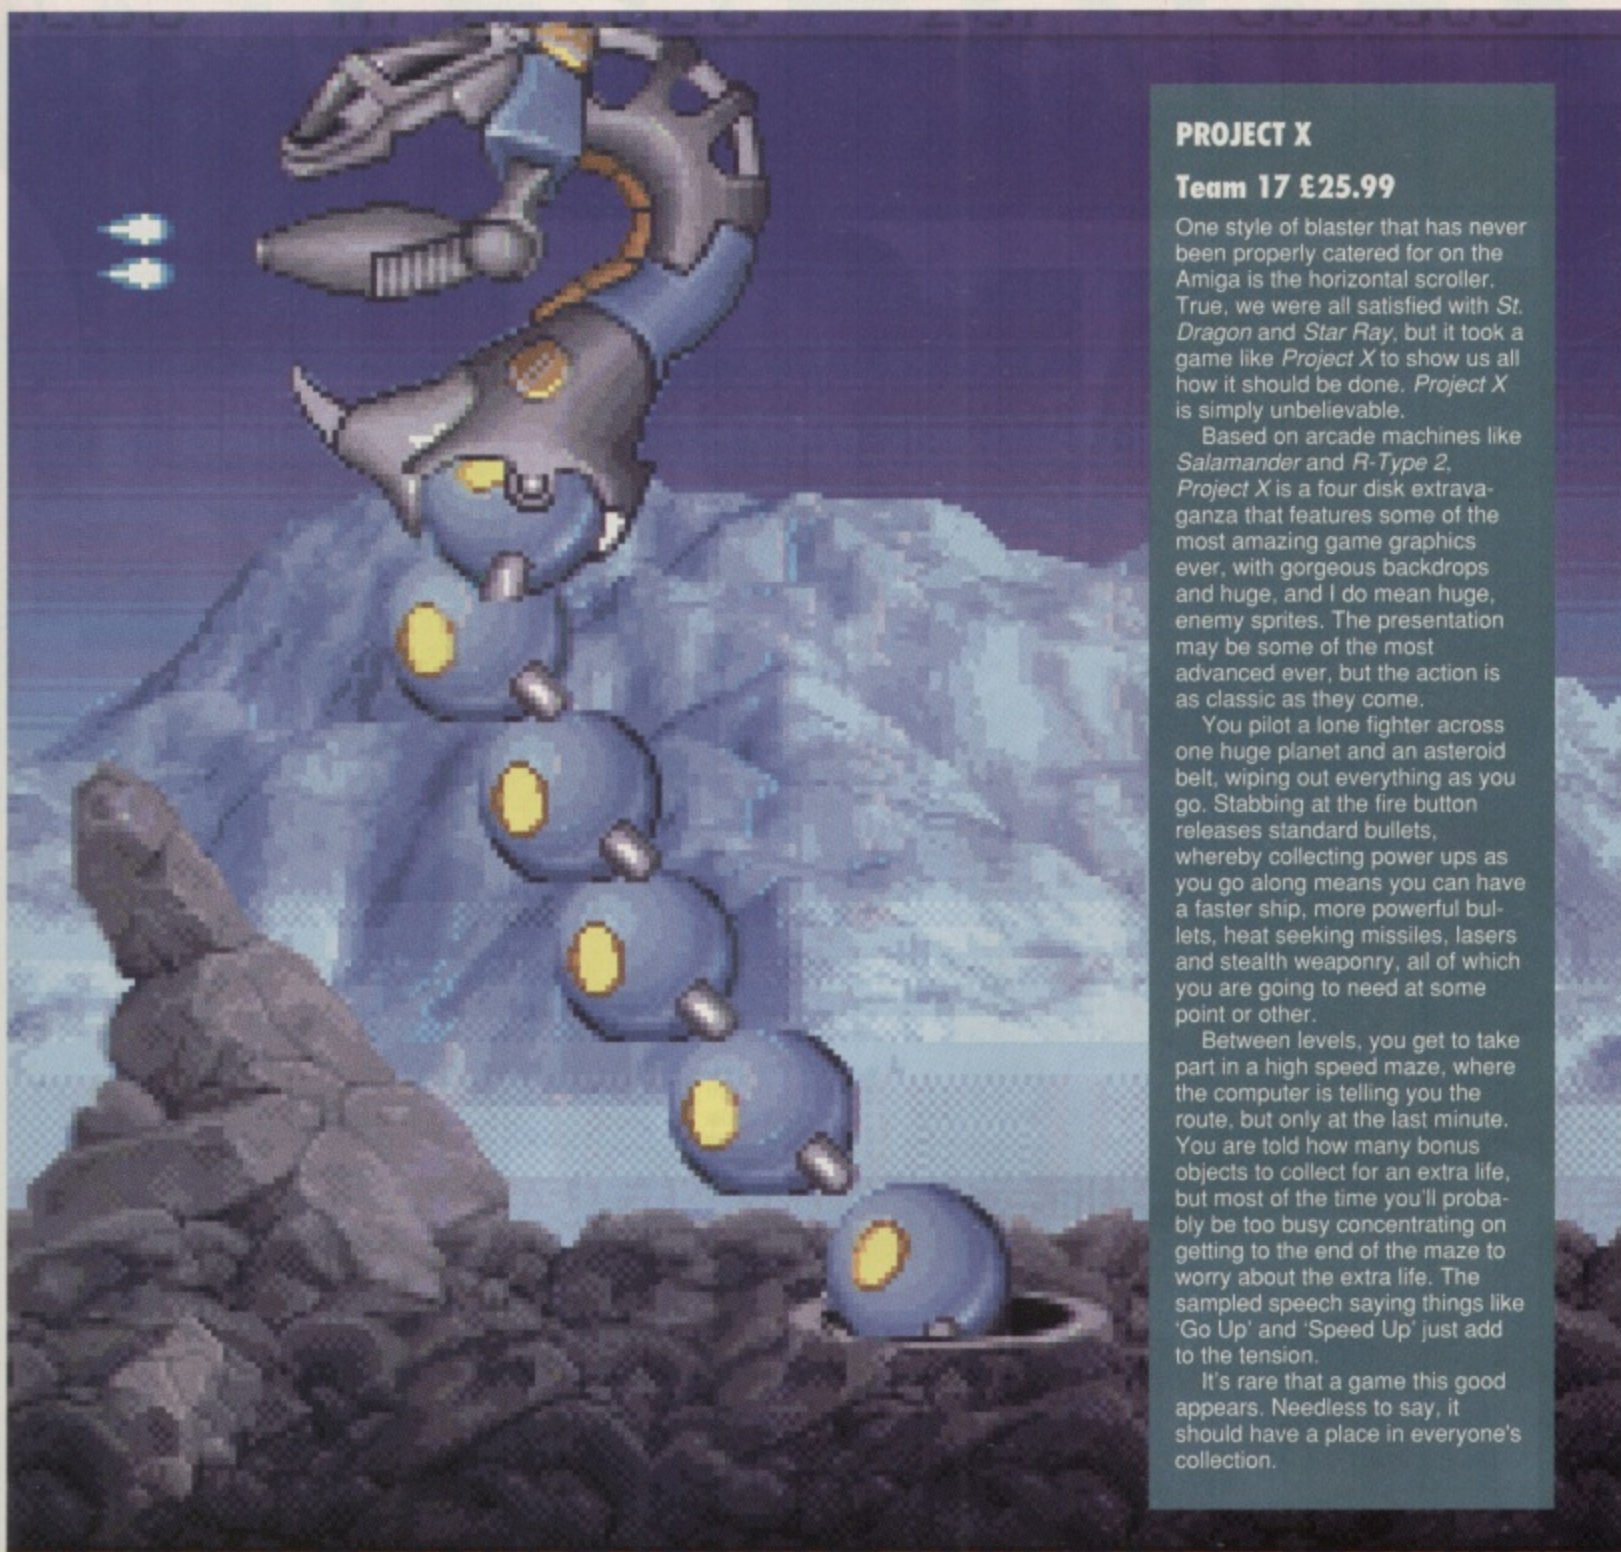

*Xenon* was acclaimed as the 'first arcade quality arcade game on the Amiga'. When the young Bitmap Brothers announced plans for a mega-sequel, the whole world sat up and got ready. When *Xenon 2* finally appeared, the world went Bitmap crazy, which isn't really surprising.

With staggering presentation, *Xenon 2* featured more of everything than anything else.

Faster, smoother, more varied weapons and aliens, more levels of parallax and the best soundtrack ever. In fact, the pumping tune that can be heard all the way through the game is a Tim Simenon mix of Bomb The Bass' Megablast.

The game itself doesn't have much of a plot. The story goes something like this: You are a space captain who just so happens to be piloting a very heavily armed ship through some region of space or other, when up pops a lot of hostile little ships that fancy a pop at you. So, you arm your laser cannons and let rip.

The best of its type, *Project X* features some huge sprites and is a fast and frantic blast.

## PROJECT X

**Team 17 £25.99**

One style of blaster that has never been properly catered for on the Amiga is the horizontal scroller. True, we were all satisfied with *St. Dragon* and *Star Ray*, but it took a game like *Project X* to show us all how it should be done. *Project X* is simply unbelievable.

Based on arcade machines like *Salamander* and *R-Type 2*, *Project X* is a four disk extravaganza that features some of the most amazing game graphics ever, with gorgeous backdrops and huge, and I do mean huge, enemy sprites. The presentation may be some of the most advanced ever, but the action is as classic as they come.

You pilot a lone fighter across one huge planet and an asteroid belt, wiping out everything as you go. Stabbing at the fire button releases standard bullets, whereby collecting power ups as you go along means you can have a faster ship, more powerful bullets, heat seeking missiles, lasers and stealth weaponry, all of which you are going to need at some point or other.

Between levels, you get to take part in a high speed maze, where the computer is telling you the route, but only at the last minute. You are told how many bonus objects to collect for an extra life, but most of the time you'll probably be too busy concentrating on getting to the end of the maze to worry about the extra life. The sampled speech saying things like 'Go Up' and 'Speed Up' just add to the tension.

It's rare that a game this good appears. Needless to say, it should have a place in everyone's collection.

## Having a Blast

### SWITCHBLADE 2 GBH £9.99

Fast, multi-scrolling blaster along the lines of *Turrican*. Faster than the original *Switchblade*, this sequel comes from the fingers of George Allen and Paul Gregory, responsible for games such as *Venus The Flytrap* and *Zool*. Considerably more active than the original, *S2* contains non-stop blasting with some of the meanest weapons ever seen, from high powered lasers to a flame thrower, against backdrops made up of over 100 screens per level. It can get a little repetitive, but you still get a lot of game for your money.

### SIMULCRA Microstyle £25.99

A slightly different kettle of fish, this one. Microprose isn't exactly known for its shoot 'em ups, and this is one with a real twist – it's in 3D. A polygon based simulation, it's almost a flight sim, but is brought back from the brink by being completely action based with no complex controls. The aim? Fly over some weird landscapes and blow the hell out of everything you see. A novel approach, and a game well worth investing in.

### SILKWORM Kixx £7.99

The original tank and chopper blaster, *Silkworm* was an average arcade machine. Fun for a while, but just not inspiring enough to make you want to keep shovelling 10p pieces into it. The Amiga conversion, by contrast, is highly addictive, showing that perhaps the game is better suited to the home player. Arcade quality graphics and sound, coupled with the Dynamic Loading System, make this game an unstoppable blast. On budget now, this can't be missed.

# LETHAL WEAPON

## TWO COPS - BOTH LETHAL

A multi-level shoot 'em up based on aspects of all three LETHAL WEAPON movies. You can choose to be either one of the two high fire-power cops... each having his individual strengths - and weaknesses! There are many missions to complete including the rescue of a kidnapped girl, the pursuit and arrest of drugs runners, finding and arresting a police murderer, plus many more. You choose the level to suit your objectives within the game-play.

# BEAT 'EM UPS

With the advent of *Street Fighter 2*, it looks like beat 'em ups are coming back into fashion. The idea is simple: beat the living daylights out of your opponent with an assortment of deadly moves. If you fancy some serious contact, then why not try one of these on for size.

## GOLDEN AXE Mastertronic £9.99 ▲

## MOONSTONE Mindscape £30.99 ▲

One of the most irritating things about beat 'em ups is the fact that once you have dispatched a bad guy, he disappears, or flies off the screen or whatever. You never have the chance to spit on the still-twitching corpse, or dance on their graves. Mindscape obviously realised this when they released *Moonstone*, a gore feast for sick and twisted individuals.

The game follows the exploits of four knights out to rid a country of evil. Played from a map, you are informed of where local monsters and treasures are, and must select where you wish to journey next in your quest for a quest. Before long, you'll find yourself thrown into the thick of battle, and this is where the fun begins.

Armed with a sword and some throwing knives, you have to slash and tear your way through everything that comes on screen, be it tiny fluffy creatures who will rip your legs off given half a chance, to enormous trolls who can lift a man with one hand, and eat them whole without need for a glass of water.

The controls are simple enough, and you are limited to only a few moves. But that isn't a problem, because the graphics easily make up for it. Every swing of the sword draws blood, and every enemy that hits the deck stays there. Find a screen with a lot of creatures on it, and before long you'll find yourself knee deep in gore. What a great game.

In the arcades, you couldn't get near it. Gamesplayers from around the world flocked to the Dungeons & Dragons style hack 'em up. Who knows how many Megadrives were sold because of it. And then *Golden Axe* came to the Amiga, and was just as good as the coin-op.

*Golden Axe* follows along exactly the same lines as most arcade combat games of the time (*Renegade*, *Double Dragon*) in that you begin at the left edge of a set of levels, in this case five in total, and have to travel to the right edge of the strip mercilessly killing everything that comes near. Don't worry, that's what everything else will try to do to you, so don't get tied up in moral issues. This is about life and death.

Two people can play, selecting characters from a shortlist of three. Each has different abilities and weaknesses, so the character you choose is vital to your success. For instance, if you're the sort of person who likes to wade in and doesn't give two hoots about the consequences, then you're better off selecting the barbarian over the elf. If however, you want more magical abilities, so you can be a little more strategic, then the elf wins every time.

The controls are extremely simple to get to grips with. Moving the joystick without the fire button pressed just moves your character around the screen, and pressing the fire button with the joystick held in a direction selects a move from a list that includes throws, kicks and the use of any weapon you happen to be carrying.

## INTERNATIONAL KARATE+

Hit Squad £7.99

Archer Maclean shows us all how this sort of thing should be done. *IK+* is the most outstanding title from a time when karate games were all anyone could think of doing. *Way Of The Exploding Fist*, *Karateka*, all you could see were combat games. And then came *International Karate +*, the new standard.

For the first time you could experience three way combat in the form of organised karate competitions. Up to three people can play, but if any less want to, then the computer takes up any spare roles. The aim is to be the first person to score six points within a time limit. You get two points for a direct hit and one for an indirect one, so skill is all important. Once a player has reached the big six, the match ends and the scores are evaluated. Only the top two go through to the next round, so whoever hasn't scored, doesn't get to go through.

What makes this game so outstanding is its speed and playability. The joystick controls were easy to pick up on, so even if you couldn't quite handle all the moves, you still had a good chance of landing a punch on somebody. The speed meant the action was always frantic, and playing with friends makes it one of the most enjoyable games ever. There's something crazed about sitting next to someone and willing them to have a minor stroke so that you can slip in a couple of kicks to the head.

## BARBARIAN Kixx £7.99

The original two-player combat game, *Barbarian* sparked a lot of interest initially due to Maria Whittaker taking a starring role in the game's advertising. Luckily, the game was better than the hype suggested.

*Barbarian* is essentially two games in one. The first is a standard combat game, where two players can fight each other, or one against the computer. Two men stand before each other, both armed with broadswords. Each also has six life points, and the aim is to remove your opponent's before he removes yours.

There are two ways to do this. The first is to simply keep hacking away with the game's sixteen moves, knocking points off slowly but surely until the other fighter falls to the ground, dead. The second method, which takes considerably more skill and a hell of a lot of luck, is to decapitate him. If done from the right distance, your fighter spins, drawing a smooth arc with the sword which ends up slipping cleanly through your opponent's neck. Nice.

It's great to play a game like this and see how it hasn't dated. Still as enjoyable as the day it was released, *Barbarian* will always be a classic.

# THE NAME GAME

*If there's one thing that can make or break a game, it's a big license. I don't mean signing up an arcade game, I'm talking about big film and character licenses. If handled right, these can be massive money spinners. Here's a selection of the best.*

## BATMAN THE MOVIE Hit Squad £7.99 ▲

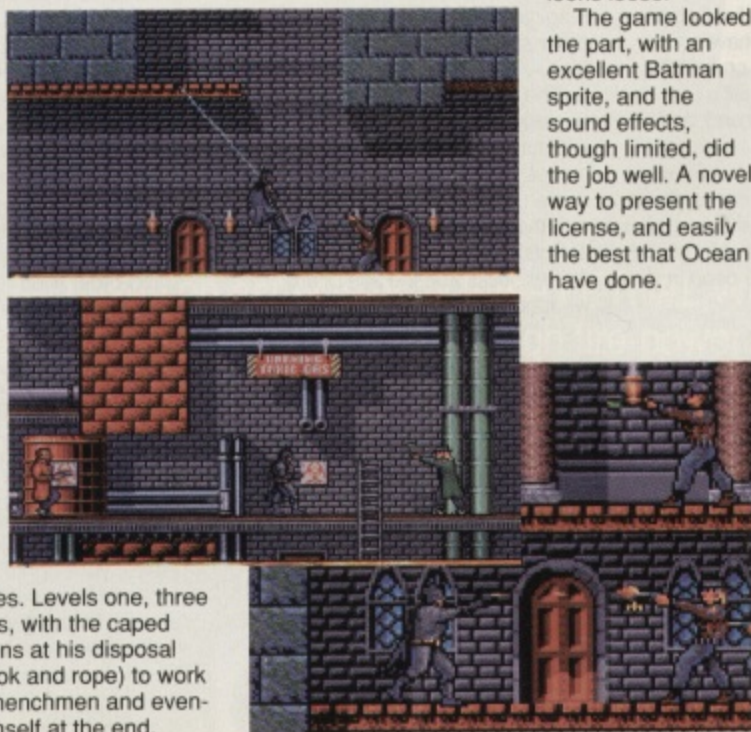

Can there be any film that was as widely hyped as Tim Burton's Dark Knight extravaganza? Everywhere you looked, Batman logos encompassed the world. Wimbledon officials banned Batman T-shirts, the comic started to sell again and Michael Keaton became one of the world's most sought after stars. When Ocean signed the rights to the game, the computer world held its breath.

Where film licenses have generally been disappointing, *Batman* was wonderful. It captured the essence of the film perfectly, and the atmosphere and energy created by, say, one of the excellent driving sections was exactly what a game like this needed. Just in case you don't remember, the game follows the plot of the Joker's emergence into Gotham city and his attempts to take over the world with Smiley, an acidic chemical that causes death by smiling.

Split over five levels, the game followed two main styles. Levels one, three and five were platform capers, with the caped crusader using all the weapons at his disposal (gun, batarang, grappling hook and rope) to work his way through the Joker's henchmen and eventually take on the big guy himself at the end.

The remaining levels were very fast driving sections, with the action viewed from slightly behind and above the Batmobile, as in *Lotus* and numerous other driving games. First you had to drive through the city avoiding the cops, then you had to fly the Batplane and cut the Joker's balloons loose.

The game looked the part, with an excellent Batman sprite, and the sound effects, though limited, did the job well. A novel way to present the license, and easily the best that Ocean have done.

Even more like the real thing than the real thing itself! That's our verdict on Jimmy White's *Whirlwind Snooker*.

## JIMMY WHITE'S WHIRLWIND SNOOKER

Virgin £29.99

This game started life as Archer Maclean's *3D Snooker*. That was a couple of years ago. Then Jeremy Beadle stepped forward and said 'Hey, why don't you get someone to endorse that?'

The bods at Virgin listened to TV's Mr. Personality and signed up Jimmy White. The rest, as they say, is history.

When it appeared, it was unlike anything seen before. True, Virgin had already released a game called *3D Pool*, but it wasn't a patch on this. Featuring a table that you could view from all angles, zoom in and out of, spin like a top and still line up a shot, the speed of the graphics was something that blew everyone away. And then you played it.

If ever a game could be described as perfect, then this is the one. Faultlessly it mimics the real game of snooker, and presents it in a way that becomes second nature in no time at all. If you are familiar with the game, and find yourself a bit of a wizard with a cue, then you'll have no problem playing this game. There are no surprise angles here, no impossible shots, and absolutely no cheats available.

In true Archer Maclean style, there has to be a few jokes thrown in. If you should leave the game for a few seconds, flies appear on the screen and start bumbling around. Leave it for a little longer, and the balls start to pull faces...

What can I say? If you like snooker, then you have to buy it. No question.

### JOHN MADDEN'S FOOTBALL

Electronic Arts £25.99

This game was already a massive hit on the Sega Megadrive, and I can't remember getting so many phone calls asking for the release date of a game prior to *Street Fighter 2*. In case you didn't know, John Madden became the youngest headcoach in history in 1969, and is now a commentator for NBC. This game is the best version of the sport ever to appear on any home machine.

Mixing styles between managerial and arcade action is always a bit risky as player manager games always seem to skip on one or the other, but not this one. You are coach to one of 16 NFL teams and have to guide them through the season and hopefully end up at the Superbowl. In your capacity as coach, you have to select and train up your team, as well as sort out the plays

With hundreds of play options at your command, *John Madden's Football* is the best NFL-simulator ever devised.

for each match, once you've assessed the strengths and weaknesses of the opposing team.

Then, you have to take on the role of quarterback, and put your all into the arcade section of the game. Again, this section is done brilliantly and with real atmosphere. Feel the crunch of bones as half a dozen 12 stone padded weights fall on you.

There's a lot to *John Madden's Football*. Far too much to go into here. The number of different play options is staggering, to say the least. If you want to know more, check out the review in February's CU Amiga, where it scored a whacking great 88%, and Dan Slingsby called it 'The most addictive sports sim ever!'. Who needs to say more?

### Star Buys...

ELVIRA  
Accolade £19.99

To date there have been three Elvira games, two graphic adventures and an arcade romp, all of which have been quite good. The adventures are of the 'pick an object up and take it somewhere else' variety, but are enjoyable none the less, especially when you consider that they both cover at least four disks each. The arcade romp is a standard platformer that features some rather terrific animation. All in all, good licenses.

INDIANA JONES  
Lucasfilm £30.99

There have been countless Indiana Jones licenses over the years, including the dreadful *Temple Of Doom* arcade game, but these Lucasfilm adventures are some of the best that the company have ever done. Massive, both in number of locations and in inventiveness, it'll take even the best adventurers to get through them. Atmospheric to the end, this is the only way to get into the character of Indiana himself.

ROBOCOP 3  
Ocean £25.99

After two disappointing licences, Ocean came out with this one long before the film was even finished, so it's hard to say how well it fits its own licence. It does, however, fit the character of Robocop perfectly. Staying with a multiple game style, Robo 3 contains a couple of amazing first person polygon sections that have our hero walking through buildings, driving and even flying with a Jetpack. If you want to know how the world looks through the eyes of a machine, then this is the game to get.

### ADDAMS FAMILY Ocean £25.99

Admit it, most Amiga owners are a teensy bit jealous of Nintendo owners because they've got Mario. We'd all like to play it at home, but there just hasn't been anything like it on the Amiga. Until now that is. When Ocean signed up the Addams Family movie, they saw it as the perfect chance to put out a Mario beater, and they did.

OK, so it doesn't quite follow the same storyline as the film, but the characters are more or less the same. A property developer wants to knock the house down to build a block of flats, and has kidnapped everyone except for Gomez. Being a respectable kind of ghoul, he sets out to free his family.

Yes, it's a scrolling platform game, but it's a bloody good one. Set in the five wings of the house and the graveyard, you have to run and bounce your way through whatever the house throws at you. In Mario style, jumping on bad guys kills them. Being hit by anything kills you.

As you work through the game, there are all sorts of little surprises to find, from secret rooms filled with bonus points and energy, to hearts which increase your maximum energy (the amount of hits you can take before you croak) and the secret weapon - the Fez copter. Collecting this give you limited flying abilities, to reach previously inaccessible platforms, usually

Spooky! Mario-style gameplay comes to the Amiga in this license inspired by cult 60s comedy sitcom, the Addams Family.

stuffed full of goodies.

So it doesn't have a lot in common with the film. That doesn't matter much. What does matter is that it's a very enjoyable and addictive game,

and one that could stand alone quite easily. The license is just an added bonus. Still, why am I telling you this? You should have bought it already!

# ROLE PLAYING GAMES

Traditionally, role playing games consisted of a handful of spotty youths with reams of paper and geometric nightmares instead of dice. Then along came the computer, and with it a new breed of role playing game. Instead of relying on a dungeon master to provide a description of a situation, you can see what's going on for yourself. So get yourself a new persona and check out some of these RPGs.

## EYE OF THE BEHOLDER 2 ▲

US Gold £35.99

Following-up on the classic *Eye Of The Beholder* wasn't going to be an easy task for SSI, but they managed it, with an improved control system, more monsters and some horribly dangerous dungeons.

If you completed the first *Beholder* game you'll be interested to know that you can advance your characters even further in this one. There's a greater array of spells, weapons and abilities open to adventurers. There is a price to pay for this, though, as many new creatures have been brought in to thwart

your quest. In addition to dungeons you can now wander around outside, which leaves yet more room for even deadlier creatures.

There's a lot of exploring to be done as well as puzzle solving, and it helps to have a pen and paper handy to jot down notes and map tricky sections of dungeon. Because of the increased difficulty you really need to think more about what you're doing. You won't last long if you lead your party into combat then start equipping them with suitable weapons.

Magic items also come more into play as certain creatures are affected by specific weapons.

The graphics really stand out in *Beholder 2*. The perspective backgrounds and fantastic creatures give the game an excellent atmosphere. Even the icon banks are well presented and clearly laid out.

This is one of the slickest RPGs available, but because it's tougher than the original it pays to have played the first game so you can graduate onto *Darkmoon* rather than be thrown in at the deep-end.

*Shadowlands* pits your four warriors against massed evil hordes.

## SHADOWLANDS Domark £29.99

This game is a little weird because you don't actually take the role of a party member, instead you sort of remote-control a group of adventurers.

*Shadowlands* employs a novel control system. To issue a command to a character you have to click on the relevant part of their body. A lot of the game seems quite confusing at first, for instance controlling four individual characters during combat

takes some getting used to.

The isometric graphics are used to excellent effect, most notably with lighting. When a

character ignites a torch only the immediate area around him or her is lit and the further away the darker it is. This also leads to some surprises, as you can't see around corners or through doors, so there are several strategically placed groups of monsters to catch out any character that strays too far from the party. Equipping the group is also quite challenging. Decent armour and weapons are few and far between, so you can either divide what you have between the four, or have one super-tough fighter and hope that they can handle most of the combat.

*Shadowlands* seems quite bizarre at first, but the excellent graphics soon win you over. The game has a really nice feel and look to it which you won't find in any other RPG. While it looks more like an arcade game, you're still required to put your brain to work to solve a number of taxing puzzles.

Taking a swipe at the likes of *Dungeon Master*, *Eye of the Beholder* brought RPGs into the nineties.

First came the best-selling board game, then came Gremlin's equally successful computer game.

### HEROQUEST Gremlin £25.99

Licensed from the board-game of the same name, *Heroquest* does away with the plastic figures and crib-cards of the table top version and replaces them with pen-free number crunching.

The attraction of the board game, apart from the plucky monsters, was its ease of use. It usually takes hours to get going in most RPGs as you roll stats and work out the modifiers, in *Heroquest* you simply picked a character and got going.

The Amiga version works in much the same way. You simply choose the characters you want to enter the first of the twelve dungeons. From there on the controls are just as simple. Icons make entering commands easy, so you can respond to a sneak attack from orcs in a split second.

What spoils this game are the number of dungeons – there just aren't enough. The first six or seven are fairly easy to beat, and although it does get much tougher, you may not want to go back to the game when you've completed it. Fortunately, there's an expansion pack called *Return Of The Witchlord* available, which contains a fresh plot and plenty of new traps and mazes for your party.

With the expansion pack this is an excellent RPG. Its ease of use makes it great fun to play and fans of the board game will love it.

### A Partying We Will Go

#### EYE OF THE BEHOLDER SSI/US Gold £30.99

With a comprehensive sequel in the form of the superlative *Legends Of Darkmoon*, it's a testament to the original that it's hardly overshadowed by such an awesome game.

*Beholder* wowed just about everybody when it was first released. It combined a sensible plot with a great deal of exploration and puzzle solving. Along with that came an easy to use control system and fantastic graphics and plenty of characters and spells.

If you've played *Beholder 2*, this will look a little dated, but that's not a good enough reason to pass up on a classic, is it?

#### CAPTIVE Mindscape £25.99

It's the far flung future, and in a dingy cell on a distant planet a prisoner has got his hands on a portable computer. Using his programming skills he's activated a group of robots and summoned them to rescue him.

This results in a game which is like *Dungeon Master* with lasers. The control system is very similar and the game plays in much the same way. The size is completely staggering, so be prepared to burn the midnight oil with this one.

#### BARD'S TALE 3: THE THIEF OF FATE Electronic Arts £10.99

Along with the *Ultima* series, the *Bard's Tale* games can be credited with helping shape the modern RPG. This instalment finds the once prosperous city of Skara Brae ruined by the mad god Tarjan. To find and destroy him you have to guide your people through a number of dimensions, battling lesser demons and collecting artifacts that will help you in the final battle. There are hundreds of levels as well as the great outdoors to explore. There are loads of character classes ranging from Monks to Geomancers and hundreds of spells to master.

#### KNIGHTMARE Mindscape £30.99

Like the TV show which this is based on you run around a dungeon battering any denizens that get in your way. The game uses a very similar system to *Captive*, although it has a few extra features. Spells and attacks can be preset, allowing you to unleash a lethal combination of magic and blows at the touch of a mouse button.

*Knightmare* is difficult, almost to the point of complete frustration, but it does have a great many addictive qualities and it pays to progress through the dungeons slowly to avoid any unexpected encounters.

### DUNGEON MASTER

#### FTL/Psygnosis £29.99

This is the game that provided the impetus for most modern RPGs.

The display consists of a large window which shows the area immediately in front of the party, the status of the characters at the top and various command icons at the side. These simple features combined to produce an RPG that was so easy to use it had people hooked in no time.

Although it looks quite dated next to the likes of *Eye Of The Beholder*, *Dungeon Master* is still

a very good game. The mazes are very large indeed, and populated with a great many foul creatures, including zombies and mummies who are a bugger to kill. It pays to play a strategic game, i.e. run when the odds look stacked against you. There are many sections that can be found early on that are best left alone until your party have advanced sufficiently to have enough magic and hit-points to deal with the situation.

When you've finished slaughtering and pillaging in your current RPG you could do a lot worse than give this a look. Even better, it now comes bundled with *Chaos Strikes Back* for only £29.99.

# GOD SIMS

*These are the games for people who like power, control and putting ants in plastic bottles then shaking them around. They're the God-sims, so called because the fate of nations and worlds lie in your hands. Some call on you to marshal your forces, others to conquer at all cost or even smite miscreants with lightning bolts. This is a relatively new genre of game, and one which will no doubt see many additions in the future.*

## POWERMONGER Electronic Arts £29.99

Like *Populous 2*, this *Powermonger* was designed by Bullfrog, and like that game you control a civilisation of tiny people on an isometric landscape, although this time you're without any special powers.

War is the name of the game. You start off with one army and the goal of conquering a world by whatever means possible. It's not as easy as pointing them at an enemy village and shouting kill, though. Firstly, they need food, which has to be sent along supply routes, found in the form of sheep which roam the land or gained by pillaging villages. Technology also needs to be acquired to give your soldiers the edge over their foes. The importance of this is illustrated when a group of your musketeers encounters an enemy platoon armed with swords.

As you get further into your quest you'll encounter other generals who can be recruited along with their armies to fight on your side. A certain amount of diplomacy is also called for as not everyone starts the game aligned to a particular side. If you encounter a neutral village it doesn't pay to slaughter their sheep and burn everything in sight, instead it pays to be nice, and bring the men-folk around to your way of thinking so they'll fight for you.

A great deal of thought is required to play this game, which makes it hugely absorbing. There are also expansion disks available, such as the World War One edition, which make the game even better.

## POPULOUS 2 Electronic Arts £29.99

*Populous* was the game that spawned the God sim genre, and with its sequel programmers Bullfrog created a game which stands head and shoulders above the competition.

The aim of a game is quite simple: you and a rival deity are given a world and instead of undignified intra-God combat for possession of it, you get the populace to do your dirty work. Last person standing wins the world for their god.

Naturally, things would get a bit boring just watching a bunch of computer-controlled religious fanatics club each other to death, so you're called upon to provide some divine intervention nudging your people in one direction while smiting a few of the other guy's when his back's turned.

Your holy arsenal consists of 20 powers which either do things to people or the land they inhabit. The most basic thing is land building. This comes into play right at the start, where the aim is to create flat terrain on which the mortals can build

castles, which provide defences and plenty of room to breed, creating more soldiers for their armies. From there such 'natural' occurrences as volcanoes, earthquakes and floods can be unleashed together with combinations of different powers that really cause some damage.

The graphics are isometric, with tiny sprites used for the people. This provides an excellent sense of proportion, especially

when you dump a whopping great volcano-from-hell right in the middle of an enemy settlement.

Virtually everything about this game is spot-on, from the smart graphics to the awesome gameplay.

## UTOPIA Gremlin £29.99

Deep space is the setting for this God-sim, with you in charge of a colony right on the edge of the known Universe. As the administrator it's your job to raise the standard of living on this mud-ball colony to 80%, while dealing with aliens and other events that befall your settlement. When the ball finally gets rolling and the population increases, you have to instigate building programmes to create more housing and amenities, as well as increase the police force. The sticking point

behind these plans is finance, even space is no refuge from recession.

Humans aren't the only inhabitants of this planet, there's also a resident colony of aliens. Naturally, they aren't too happy with their new neighbours, and the decision to tolerate or attack them lie firmly in your hands.

This is a little more cerebral than the other God games, combining overtones of *Populous* and *Sim City*. The control system is clumsy and takes time to get used to, but it's worth persevering with as this is an enjoyable game.

# RICOH PCL5 LASER PRINTER

Ricoh UK Ltd is part of the worldwide Ricoh Group of companies, originally established in Japan, in 1936. With a turnover of over \$5 billion and 37,000 employees, Ricoh have been producing computers and peripherals since 1971 and are the world's second largest manufacturer of Laser Printer engines. Ricoh have employed their expertise to produce a 'first' in laser printers for the world market, the LP1200 with FLASH ROM.

Fully HP LaserJet III™ compatible, the new LP1200 employs industry proven laser technology. Unlike LED page printers, which use light emitting diodes, the LP1200's laser lightsource, focussed by high quality lenses, is able to produce the most accurate and intense printed images. It has 2Mb of RAM built-in and requires no additional RAM to print a full A4 page of graphics at 300dpi. Its fast, efficient processor and engine, together with a straight paper path design, allows printing at a full 6 pages per minute. Unlike its competitors, this advanced laser engine enables the LP1200 to address a range of print resolutions up to 400dpi. A special driver, combined with the 2Mb RAM upgrade, enables the Ricoh LP1200 to print at 400dpi from Windows 3.

Again, unlike the competition, the LP1200 includes a powerful document description language as standard. This language, 'LAYOUT', offers unique opportunities to develop custom-made printing systems. Forms and document templates can be designed and stored electronically in the LP1200's FLASH ROM, alleviating the need for pre-printed forms!

FULLY HP LASERJET III™ COMPATIBLE

All Trademarks are acknowledged

Silica Systems are pleased to introduce the revolutionary, new Ricoh LP1200. It has all of the specifications that you would expect to see in today's most technically advanced laser printers, plus a unique additional feature which places it far ahead of the competition - FLASH ROM. This 'Future Proof' technology protects the investment you make when you buy a Ricoh LP1200, as it enables you to keep up to date with new laser firmware developments. FLASH ROM is an area of memory inside the LP1200 which holds the printer's controller instruction firmware. If new firmware is developed, updated printer command languages etc, can be downloaded into this memory. Other manufacturers would require you to buy a new printer! Fonts, macros, graphics and additional emulations can also be stored in FLASH ROM, or on removable, industry standard FLASH ROM IC cards. The new Ricoh LP1200 is the only laser printer to offer this FLASH ROM facility. The LP1200 comes with a 100 sheet A4 paper tray (letter and legal trays also available as extras) and the facility to feed single sheets of paper and card up to 157gsm. An optional extra universal feeder provides the facility to automatically feed up to 150 sheets, from sizes of 98mm x 148mm to 216mm x 356mm in size at weights of up to 158gsm. The universal feeder also feeds up to 15 envelopes, overhead transparencies and labels automatically.

## Consumables + Accessories

CODE	PRODUCT	PRICE Exc VAT
CAB 7500	Cable for PC/ST/Amiga	£8.47
LAA 5238	Universal Feeder (2nd Tray)	£100.00
LAA 5262	2Mb RAM Module	£149.00
LAA 5210	Developer/Toner Cartridge	£65.00
LAA 5225	OPC Cartridge (Drum)	£89.00
LAA 5334	Letter Paper Tray (100 Sheets)	£35.00

## SILICA SYSTEMS OFFER YOU

- **FREE OVERNIGHT DELIVERY:** On all hardware orders shipped in the UK mainland.
- **TECHNICAL SUPPORT HELPLINE:** Team of technical experts at your service.
- **PRICE MATCH:** We normally match competitors on a "Same product - Same price" basis.
- **ESTABLISHED 14 YEARS:** Proven track record in professional computer sales.
- **£12 MILLION TURNOVER (with 60 staff):** Solid, reliable and profitable.
- **BUSINESS + EDUCATION + GOVERNMENT:** Volume discounts available 081-308 0888.
- **SHOWROOMS:** Demonstration and training facilities at our London & Sidcup branches.
- **THE FULL STOCK RANGE:** All of your requirements from one supplier.
- **FREE CATALOGUES:** Will be mailed to you with offers + software and peripheral details.
- **PAYMENT:** Major credit cards, cash, cheque or monthly terms.

Before you decide when to buy your new laser printer, we suggest you think very carefully about WHERE you buy it. Consider what it will be like a few months after you have made your purchase, when you may require additional peripherals or consumables, or help and advice with your new purchase. And, will the company you buy from contact you with details of new products? At Silica Systems, we ensure that you will have nothing to worry about. We have been established for almost 14 years and, with our unrivalled experience and expertise, we can now claim to meet our customers' requirements with an understanding which is second to none. But don't just take our word for it. Complete and return the coupon now for our latest FREE literature and begin to experience the "Silica Systems Service".

# ARCADE CONVERSIONS

*Recent months have seen a drop-off in the number of coin-op conversions appearing on the Amiga. Is this because the software companies feel the latest wave of high-tech games to hit the arcades are unconvertible? Who knows. Whatever happens, the Amiga already has acquired more than its fair share of excellent coin-op conversions over the past few years.*

## RAINBOW ISLANDS Hit Squad £7.99

This is the game that sparked a whole wave of so called 'cutesy' games on the Amiga. The aim of the game is to get to the top of a series of vertically scrolling levels which are set on several islands. This wouldn't be much of a challenge if it weren't for the hordes of monsters which come after you. Our hero's only defence comes from his excellent jumping ability and the rare talent of being able to produce rainbows from his finger tips. While refracted light doesn't sound like much of a weapon, in this game you can use the rainbows to help you get to the higher levels or to trap nasties.

Each island ends with a showdown with a boss, but these are more cute than fearsome. Most are surrounded by platforms, which have to be traversed in order to avoid the boss and get some hits in.

There are bonuses galore throughout each level. Most of them just top up your score, but others increase the amount of rainbows you create and the speed your character moves at. Although *Rainbow Islands* looks like it's completely dependent on joystick skills, there are lots of different strategies that can be used on particular levels and, as if that wasn't enough, there are plenty of secret stages too. They're difficult to find, but it's worth looking out for them.

Without a doubt one of the most addictive games ever on the Amiga. There's so much to it and the garish colour scheme is fantastic.

## PANG Hit Squad £7.99

You can tell that the coin-op this game is licensed from originated in Japan. Where else would you get a concept as bizarre as travelling around the world bursting bubbles? While this may sound about as exciting as clipping your toe-nails, it does make for a frighteningly addictive game. Each level is played on a single screen, and to begin with you're faced with just one large balloon. The hero is armed with a gun that fires a chain with a spike on the end. When it hits a balloon it bursts into smaller ones, just like *Asteroids* (if you can remember that far back). As you progress through the game you face more and more balloons at once, and platforms appear, inviting you to take risks and causing the balloons to become trapped, adding to your problems.

Some helpful, and not so helpful bonuses appear from time to time. One of the best is the gun, which swaps your chain weapon for a rifle which makes short work of the balloons. Another useful one doubles the amount of chains you can fire, while collecting dynamite explodes all the balloons so you're left facing hundreds of tiny ones.

*Pang* has the added bonus of a two-player mode, which makes it even more playable. An essential purchase.

## GAUNTLET US Gold EDELETED

*Gauntlet* is a real arcade classic, and this conversion from US Gold really does it justice.

It's set in a Dungeons & Dragons-type world, which is made up entirely from mazes. Naturally the aim is to get through these in one piece.

There are four characters to choose from: the Wizard who's competent in magic and not much else, Valkyrie who's not quite as good with magic but can move faster, Elf who's the fastest of the lot and Warrior who's not good with magic but

excels in combat.

While the graphics are tiny there are lots of them. The heroes come under attack from dozens of creatures, as well as the indestructible Death who appears from time to time to drain the energy from the first available character. Many of the levels contain subtle puzzles such as a series of magic blocks which have to be trodden on in the right order to open doors. The game is played against the clock, as the characters' energy

depletes constantly, even when standing still. Food has to be collected to replenish it, which often leads to confrontations between two players who are both close to death.

The Amiga version is every bit as playable as the coin-op original. It has all its features, right down to the walls turning into exits if you hang around for long enough. Fans of the game shouldn't miss this version.

# STRATM2GYRANSLIM

## **SUPER HANG-ON** Hit Squad £7.99

Super-slick racing skills come into play in this quality arcade conversion.

Despite being a real golden oldie, *Super Hang-on* is a fantastic conversion of the old Sega coin-op.

Although it's been around for a few years, *Super Hang-on* is still one of the best racing games available for the Amiga. It has all the right ingredients. The action is real fast, there are plenty of other riders who can be forced off the road and the graphics are great throughout, with a smooth scrolling track and road-side objects that update in convincing manner.

*Super Hang-on* is also very well presented. There are four different tracks set in various parts of the world. Each has its own set of graphics and specific hazards which can test the greatest riders. You can even select what tune you want to accompany you as you race.

## **Plenty of Continues**

### **ARKANOID 2: REVENGE OF DOH** Hit Squad £7.99

Breakout comes bang up to date in this challenging coin-op conversion from Ocean.

Gone are the days when you merely had to smash a few bricks by bouncing a ball off a paddle. Now you've got loads of collectible extras such as extend-o-bat, super-smash ball, multi-ball and a laser gun. Some of the levels are very maze-like, requiring one precise hit to send the ball into a chamber, where it accelerates and causes you untold problems when it shoots out again.

Although it can be quite frustrating at times, there's no doubt that this is an addictive game which is guaranteed to test your reflexes.

### **BUBBLE BOBBLE** Hit Squad £7.99

Here's one of the first Amiga games that could be described as arcade perfect. The graphics are simple, consisting of platforms, walls, black backdrops and cute sprites. You, and a friend, control Bub and Bob. Instead of blowing fire, these reptiles breathe bubbles, which can be used to trap the nasties. Like most Japanese platform games there are plenty of levels and loads of bonuses to collect. The net result is a great game which is even better with two players.

### **OPERATION THUNDERBOLT** Hit Squad £7.99

The coin-op version of this game was instantly recognisable by the two whopping great Uzis which were mounted on the front of the cabinet.

It came along as the sequel to *Operation Wolf*, and bettered it both in the arcades and on the Amiga. The action is viewed in first person perspective, with you blasting away at anything that moves with a machine gun and rocket launcher.

Not only does this game have the side to side scrolling of *Operation Wolf*, but it also features neat 3D sections where you trundle along in a boat or a jeep.

Not the prettiest coin-op conversion ever, but a good bit of carefree machine gunning never goes amiss, and that's what makes this game so much fun.

## **NEW ZEALAND STORY** Hit Squad £7.99

Kiwis, or the lack of them, are the unlikely subject matter for this game. You see they've all been kidnapped. Bar one.

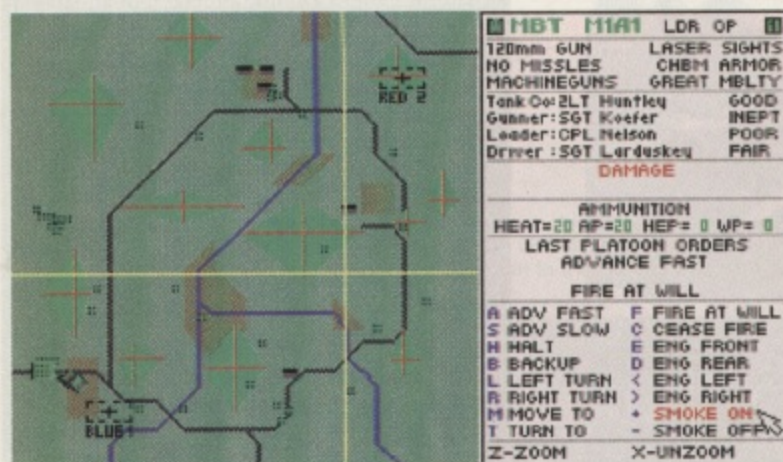

As this lone Kiwi you're on a mission to rescue your kinsbirds from the clutches of the evil force that holds them hostages.

This is one of the best platform games on the Amiga before it was superseded by the likes of *Rainbow Islands*. Even so, it's still very good fun and worth getting hold of.

# MILITARY SIMS

*There are enough military flight-sims to fill a section, but the armed forces don't end there. If you've always wanted to get fallen in with the army or take to the high seas in a state-of-the-art submarine or destroyer, then here's your chance.*

## M1 TANK PLATOON ▲

**Microprose £30.99**

After Vickers were pipped at the post by the Americans with the contract to supply the Kuwaitis with tanks, you can find out why.

*Tank Platoon* gives you control of your very own column of shiny, state-of-the-art American M1 Abrahms battle tanks. These caterpillar-tracked terrors are out-fitted with high-explosive HEAT missiles, tank-busting Sabot rockets, com-

puter-aided laser sighting devices and a large .50 calibre machine gun.

The graphics are typically Microprose, with detailed instrument displays and vector graphic landscapes and objects. Unfortunately, most of the combat takes place at a distance, with you shelling positions from hills, or vice-versa, so there's not much opportunity to see anything close-up.

While you can sit in the gunner's, driver's or machine gunner's seats in any of the tanks in your platoon, your real task is to guide them to their targets, pound the hell out of what they find there, then get them back safely - anything else just stops you getting bored. Your not on your own though, as some missions give you control of anti-tank batteries, troops and yet more tanks, which gives the game more of a wargame element. In addition, artillery strikes can be called in, as well as air strikes from helicopters and A-10 tank-busting aircraft. One of the most comprehensive simulations of any kind.

## PACIFIC ISLANDS Empire £29.99

*Pacific Islands* really puts you in the thick of things, as you look out of the eyes of four tank-platoon sergeants at once.

This works by dividing the main screen into quarters, with each showing a reduced display from the lead tank of each of your four platoons. The place to start is the map screen, where you issue the move and attack orders to each platoon as well as receive an overview of the battlefield. When a platoon encounters an enemy, simply clicking on its window brings it up to full size so you can deal with the situation. So that the game doesn't become too complicated, the four tanks are controlled as one. This means issuing a fire command will only make one tank fire if you have direct control over that unit. There's no waiting for it to reload, though, as the next shot comes from the next tank and so on. You can also leave the computer to fight your battles, which is essential on the later missions where the enemy strike from all sides.

Not only do you have to be an expert tank pilot and strategist, you also play the role of the platoon's accountant. Repairs are expensive, and you're only allocated a limited budget, which shrinks with poor performances on the battle field.

## SILENT SERVICE 2 Microprose £34.99

*Silent Service* takes us back to World War Two when submarine warfare was still in its infancy. One of your biggest enemies is unreliability. Torpedoes, for instance, can't be trusted. You may think that the destroyer that's right in your periscope sights is going to get its comeuppance, only to have a torpedo bounce harmlessly off its side.

Another drawback of 1940s technology is the poor sonar. It can be very difficult picking up a contact, so the periscope is often employed in finding ships. But all the effort is worth it. Score a direct hit and you're treated to a graphic of the assailed vessel exploding and sinking.

Voyage to the Bottom of the Sea was never like this!

## The Call To Arms

**HUNTER: Disc Company £29.99**

Rather than just deal with one mode of attack, *Hunter* encompasses land, sea and air.

Your overall mission is to wipe out the enemy's HQ by planting a ruddy great bomb underneath it, although there are several smaller tasks to complete en-route. To fight your way through the enemy lines you can control hovercraft, tanks, helicopters, windsurfers and even bicycles.

Despite *Hunter's* many elements it cuts no corners. You need to plan out your route to take in supply dumps and an informer who'll help you out. Mastering the different vehicles is no mean feat, either. It will be a long time before you're finished with this game.

**CARRIER COMMAND: Kixx £7.99**

This was a ground-breaking release in 1987 and after all that time it's as good as ever.

It's set in a massive archipelago, part of which

is claimed by your side, with the rest either neutral or in enemy hands. To conquer all of this strategically vital area, you've been brought in along with your gigantic super-carrier ship. It's equipped with aircraft, amphibious craft and a formidable arsenal of its own, all of which have to be employed to capture the islands and fend off the equally powerful enemy carrier which is out doing the same job.

All these elements plus the strategy side of the game make it hugely playable.

# STRATEGY GAMES

*This is where reflexes end and cerebral prowess begins. Strategy games require pure brain-power as you manage a city, create a planet, fly off the rails or stir up trouble in neighbouring countries. Strategy games are usually far more involved than most other games, which is often reflected in their sizable manuals.*

## SIM EARTH Ocean £34.99 ▲

*Sim Earth* literally places an entire planet at your disposal. You have complete control over everything, from triggering continental drift to generating the flora and fauna.

It's divided into several chunks such as the geosphere which covers the geology of the world, the hydrosphere which takes in the oceans, rivers and lakes, the atmosphere, and the biosphere which deals with the planet's lifeforms and civilisation. Each section has its own options and how you develop one affects what goes on in another. For instance, chucking plenty of carbon dioxide into the atmosphere at an early stage will raise the planet's temperature, which creates more desert in the geosphere, higher and more fertile oceans in the hydrosphere and causes the extinction of certain creatures from the biosphere.

There are a number of scenarios which range from creating your own planet from scratch to terraforming Mars or colonising Venus. A meteor strike is just the thing for splitting continents asunder, while a strategically placed volcano is just right for retarding a civilisation which is getting too big for its boots.

## SIM CITY Action 16 £10.99

This is a fantastically playable strategy game in which you get to create and run a city. You start with a limited budget and a bank of 14 icons representing various types of civic improvement. As your city grows so do the problems associated with any urban development. Crime increases along with the population and large scale pollution and traffic problems set in.

As long as you have money in the bank you can make any improvements you want. So a nuclear powerstation in the centre of town is perfectly viable! Lurking around the corner are natural disasters. These occur without warning (or you can instigate them if you're in that kind of mood) and can include tidal waves, earthquakes, nuclear meltdowns and Godzilla running rampant. When something like this happens you then have to attempt to repair the damage done and prevent the population fleeing, which is tougher than building the city in the first place.

## CIVILISATION Microprose £34.99

If a planet's too big for you and a city's too small, you could always try your hand at managing a civilisation. The game begins in the year 3000BC. You're proclaimed despot of a small tribe struggling to make an impact on history. To begin with, literacy and the wheel are essential, but over the

## Everything is Under Control

### CASTLES Electronic Arts £29.99

This is quite a strange idea for a game. Basically you have to build and maintain a castle in medieval England and fight off hordes of invading Welshmen.

It sounds weird, but this is actually the basis for a very sound game. Design the blueprints for your own castle in the country, then extort money from the peasants to pay for it. All the time you have to balance construction with defending England from the Welsh and helping feed the substantial workforce. Great fun.

### SIM ANT Ocean £34.99

The third of Maxis' Sim series puts you in the rather creepy role as the head of an ant colony.

In this position you have to guide the workers to food, fight red ants and determine which types of ants should be bred. Too many workers and the colony will run out of room, too many builders and there will be plenty of space but no food.

Like *Sim Earth* and *Sim City*, *Sim Ant* is very absorbing and educational at the same time.

### BALANCE OF POWER Mindscape £25.99

Fasten up your diplomatic pouch for *Balance Of Power*, the game of global diplomacy.

As President of America, or Premier of the USSR (this game's a little old) you have at your disposal aid packages, military force and the secret service. Invade your neighbours or be nice to them, what the hell? It's your foreign policy as you attempt to sow the seeds of communism or smash the red block, depending on which side of the curtain you're on.

next 5000 years advances such as combustion, iron working and nuclear power have to be acquired to build a thriving civilisation.

Elsewhere in the world there are other civilisations such as the Romans, English and Mongols who are also out to create massive empires. It's possible to trade with them or, if you want to take a more aggressive approach, burn their empires to the ground.

## RAILROAD TYCOON Microprose £34.99

Most people have played with a train set at one time or another, well here's one for your Amiga.

*Railroad Tycoon* involves a bit more than crashing Hornby locomotives into your Action Man though. Set just after the invention of the steam train, you've been hired to run one of the first commercial railways.

The game features a number of settings, from colonial east USA to untamed west, or if you fancy playing closer to home you can set up shop

in England or Europe. Wherever you go rivals will soon catch on to this new form of business and set up lines, so you have to move fast.

The key to success is identifying the markets. As the saying goes you can't take coals to Newcastle, so you need to look at what each town needs and where they can get the merchandise from. A port is usually a good place to start off, connecting somewhere like Liverpool to Manchester. Profitable routes help the economy of the town so it grows and you make even more money.

# WAR GAMES

**Tabletop wargaming has never been acceptable to the masses, which is a shame. It isn't as if most people couldn't take part if they wanted, it's just that most people don't want to. It's not all wearing woolly cardies and NHS specs standing in someone's attic pushing plastic soldiers around you know! Wargames can be more addictive, and definitely more exciting than most other games, as these pages prove.**

## LASER SQUAD ▲

**Software Business £25.99**

Julian Gollop loves strategy games. So much so that he slaved long and hard hours to create one of the best 8-bit strategy titles ever – *Rebelstar Raiders*. *Laser Squad* takes the *RR* system and turns it into something really special.

A very low-level wargame, each of the game's seven scenarios is played out over small locations such as buildings and underground bunkers, with an aim to destroy a collection of specific targets, or just all of the enemy's units.

The game, like so many wargames, is played using a system of turns and action points. Action points are like an energy resource which govern how much a unit can do in each turn, and vary greatly depending on morale, strength and encumbrance.

*Laser Squad* is converted directly from the 8-bit versions, and so lacks some sophistication in the graphics department. What has also come directly from the C64 is the atmosphere. *Laser Squad* is a very tense game, and manages to inject a feeling of fear that most games seem to miss.

## SPACE CRUSADE Gremlin £25.99

*Space Crusade* is Gremlin's second stab at converting a boardgame to the home screen (after *Heroquest*), and is generally regarded as a bit of a winner. Remarkably similar to *Laser Squad* in a lot of ways, *Space Crusade* is another low-level strategic blast where you have to get your five man team in and out of small places as quickly as possible, while obliterating as many things as possible.

A new twist is that three players can play at once. What you have in three player mode are three teams of five men, all wandering around with a common cause. This all sounds dandy, but what happens when you get a mission that involves blowing away all your best mate's team members, i.e. a scenario that says that there's only one escape pod, or that there's only enough oxygen for one team to get out alive?! Then the sparks start to fly.

All the battles are shown in 3D which, although it slows the game down a little, still adds a lot of atmosphere. I would rather see a large sprite of the guy I'm shooting at explode in a puddle of viscera than watch a blip disappear from my scanner.

## If you need reinforcements...

### WATERLOO PSS £10.99

This is an interesting one. It only features the one battle, but is done so well, that you keep wanting to come back and try another tactic. The single striking thing about it is the graphics. Unlike most games, where you can scroll around the map to your heart's content, *Waterloo* only lets you view the battle from high points in the immediate vicinity, rather like Wellington or Napoleon would have done. Some excellent computer strategies make it a very tough one to beat.

### BALANCE OF POWER Mindscape £25.99

There are two versions of this game, both as good as each other. Similar in a lot of ways to that classic game *Risk*, the idea is to keep world peace as the cold war hots up. Money management is the centre of the game, where you must decide whether or not to send government funds to various sources all over the world, be it friendly governments in need of a bit of cash, to revolutionary states who need US support to overthrow the government. Obviously a lot of what you do will upset the Soviet states, and before long you'll find yourself at *Defcon 1*. A frightening prospect realistically represented.

## UMS Microprose £30.99

If real-life war is your scene, then the *Universal Military Simulator* is the closest to tabletop war there has ever been on a computer. The product has been designed as a battle creation environment, within which you have complete control over the world.

Tinkering with the five pre-designed scenarios is great. For example, I discovered that if King Harold had access to a few F-15s and a couple of Sherman M1s, he would have had no trouble at all in defeating the Saxons.

With a menu-driven interface, and a very simplistic but effective 3D landscape, the game looks a lot more complicated than it is. One for the purists, undoubtedly, but great fun nonetheless.

## BATTLE ISLE Ubisoft £30.99

*Battle Isle* is so simple, it is played with the joystick – novel for a game of this type. The aim is world domination, as usual, and you play against the backdrop of 32 islands on a futuristic planet. To win, all you need to do is take out as many of the opposition as necessary to halt their progress and allow you to take the island.

Rather than use standard turns, the game operates in phases, whereby you have specific blocks of game time to do specific things, such as

a movement phase and a combat phase. One interesting idea is the fact that while you are doing one, the opposition are doing the other.

You have 22 different types of weapons and vehicles, all of which have varying strengths, speeds etc. Learning how to use combat and support units well is one of the keys to the game. Of course, if you're playing against a friend, then strategy will probably go out the window, but one player against the computer requires you using every army tactic you ever heard. Even then, there's no guarantee that you'll even survive.

# AMIGA INTERACTIVE MULTIMEDIA

AMIGA

## WHAT IS CDTV?

Simply put, CDTV mixes CD sound and Amiga type software in one easily controlled unit, and allows you to "interact" with the results through your television. On the outside the CDTV Standalone Player is a sleek, elegant black box. Inside it contains the workings of the UK's most popular home computer, the Commodore Amiga, but with two major differences. Instead of a keyboard and mouse it uses a video style remote controller for simple operation and, instead of a floppy disk drive, there's a compact disc drive.

## MUSIC & SOFTWARE

As well as being able to play standard studio compact discs in high quality stereo sound, the CDTV can also use software stored on CD. This is similar to Amiga software, with thousands of Amiga programs available. You also get much, much more - a CDTV Disc is equal to over 600 floppy disks in capacity.

## WHAT CAN IT DO?

With CDTV you can listen to your favourite pop group, look up history, play the latest arcade games, have a Karaoke night or learn French. In one unit, CDTV can do things you would otherwise need a video, CD player and computer to do! You can watch as Neil Armstrong walks on the moon, listen to him speak and read the fascinating details of how Apollo got there!

## INTERACTIVE MOVIES

A new kind of movie; hi-fi sound tracks and moving pictures just like cinema films, but you determine the outcome and how the plot turns out! Will Batman really save Gotham City? Interactive movies are set to arrive on a CDTV near you soon.

## EDUCATION

With its huge storage capacity, colour graphics and easy control, CDTV is ideal for education. Levels from primary education to adult foreign language courses are available.

## ENTERTAINMENT

Packed with masses of colourful graphics, hi-fi sound and huge levels, CDTV games are set to dwarf their Amiga counterparts. The CDTV award winning version of Sim City for instance, has 10 Megabytes of extra graphics, studio recorded sound for CD Audio quality, more detailed game play (new zoom mode) and 4 different eras (Medieval, Western, Actual and Future).

## REFERENCE

Imagine that you could refer to several encyclopaedia's at once, without having to constantly swap between publications, flip pages or refer to lengthy indexes across multiple books? CDTV Reference titles enable you to do this plus a lot more!

## MORE FORMATS

CDTV can play CDTV software, CD audio discs, CD+G (audio discs with lyrics and pictures), CD+MIDI (special tracks along side the audio tracks control MIDI instruments attached to the CDTV). With the aid of a floppy disk drive and keyboard, CDTV can also run most Amiga software.

**TECHNICAL SPECIFICATIONS:**

- 68000 16/32 bit processor running at 7.14MHz
- 3 Custom chips for video, sound and graphics
- Internal video expansion 15-pin edge connector and DMA slot
- Analogue RGB, Digital RGB, Composite (PAL) video output
- 512 Lines/Vertical frequency 60Hz display
- Maximum 1Mb video memory, with palette of 4096 colours and 8 sprites per scanline
- Centronics Parallel & RS-232 serial interfaces
- External floppy drive (Amiga compatible), hardwired alternative to remote control for keyboard, mouse etc
- 2 Audio ports (phono), MIDI IN and MIDI out, Stereo headphone socket, Smart Card slot for RAM/ROM cards
- Sony/Philips type CD-ROM standard with an average access time of 0.5 seconds & maximum access time of 0.8 seconds
- Data Capacity 540Mb
- Conforms to standard ISO 9660
- 8 x Oversampling
- Signal/Noise of 36Cdb
- Audio Output to external output 1.4V RMS, 10K Ohm
- Frequency response of 4-20 kHz
- Sample rates of 44KHz to 60KHz
• Channel Specification -45Cdb
- Harmonic Distortion 0.005% at 100Hz
- Max. audio capacity per disc 28hours, AM quality
- Dual 16-Bit D/A converter plus 64 levels of attenuation

## FREE FROM SILICA

**SIM CITY CD**

If you have ever played Sim City on a normal Amiga, you will be amazed when you see, listen to and play the Amiga CD version! Now even more addictive, with studio recorded sound and a massive 10Mb of graphics, Sim City CDTV is a life simulation game that has to be seen to be believed! Sim City comes free with every CDTV or A570 from Silica.

**WORTH £29.99**

## ADD-ON FOR AMIGA OWNERS AMIGA A570 FOR THE A500

**£50 OFF RRP PLUS! SIM CITY FREE**

**COMES WITH FRED FISH CDPD COLLECTION PLUS! FREE FROM SILICA SIM CITY WORTH NEARLY £50**

The A570 is an essential add-on for your Amiga 500. CD-ROM is set to replace disks as the standard format for games and serious titles in the not too distant future. Most software companies have already announced plans to release CD versions of their software!

The sheer storage size of a CD (600 disks) means that using CD software is faster, graphics are enhanced and game play is increased with bigger levels, more complex problems to solve and larger areas to explore! And, being compatible with audio CDs, the sound quality from CD games is unrivalled! Sim City for instance has over 10Mb of data for its graphics alone and has music recorded in a studio! Silica's new low price of £299 means that there is no better time to buy the A570 and, with the award winning Sim City included FREE with every A570 from Silica, there's no better place to buy it from!

- Enables your Amiga to run CDTV software
- Plays normal audio CD discs
- Storage capacity equal to 600 floppy disks
- Internal RAM expansion option (Coming Soon)
- Internal hard drive option (Coming Soon)
- Compatible with CD + G and CD + MIDI formats
- Transfer time 153Kb/second
- Compatible with CD-ROM industry standard ISO9660
- Comes with Fred Fish CDPD collection + Sim City FREE from Silica

Note: 1Mb of Chip RAM/FAT Agnus is required for full compatibility with all CDTV software. Silica offer an upgrade service. Please call and quote REA 1000.

**SAVE £50! OFF RRP**

# FLIGHT SIMS

*The choice is simple - spend a couple of grand getting a pilot's licence and zip around in light-aircraft, or splash out 30 and try your hand at airborne death-dealing. The Amiga now has a wealth of excellent flight-sims which cover both world wars (some late 80s games actually feature WW III) with biplanes, jet-fighters and helicopters.*

## WINGS Cinemaware £DELETED ▲

This offering from Cinemaware is definitely not one for flight-sim purists as its attraction lies as much in its simplicity as its presentation.

It's set during the closing years of the First World War, when fighter aircraft were just beginning to get off the ground, so to speak. You've been recruited into the Royal Flying Corp to help win air-superiority over war-torn France, although the life expectancy of new pilots is very poor indeed.

Like all Cinemaware games, *Wings* has a distinctly story-book feel. All the way through you're updated on the goings on of your fellow pilots and what the Hun are up to.

During dog-fights the action can be viewed externally or from the cockpit. Exterior views come in handy for spotting enemy aircraft as your field of vision is limited in the cockpit and, unlike simulations of modern day aircraft, the only tracking device you have are your eyes. Bombing runs take a different view-point. Here you're looking down on the plane as it flies over enemy land. You still have control over it in the usual way, but hitting the fire button now releases bombs instead of triggering the machine guns.

While *Wings* has a fantastic atmosphere and is superbly presented, it isn't very complicated. This makes it ideal for beginners, as there are few key-presses with most of the controls centred around the joystick. Experienced pilots may find this a little off-putting, but they shouldn't let that put them off what is really a superb all-round game.

For flying by the pants action, *Wings* cannot be beat.

## KNIGHTS OF THE SKY Microprose £34.99

Like *Wings*, *Knights Of The Sky* is set mid-way through World War One, but the difference here is detail.

While *Wings* is very playable, this game is far more realistic. You sign on as a trainee pilot in either the Luftwaffe or the Royal Flying Corps with the aim of earning promotions, battling aces and making a name for yourself in the flying community.

As the game progresses and you start racking up kills, some of the established enemy pilots start taking an interest in your exploits. When this happens you stand a greater chance of running into enemy aces, who don't like upstarts with an outrageous number of kills.

One of the most notable features of this game is its speed. Considering the amount of ground detail and the complexity of the other aircraft, the game rarely slows down and plays at a cracking pace throughout.

It's the lack of technology in a bi-plane that makes this game so much fun. There are no missiles, electronic jammers or radar, you simply have to spot an enemy, get in close and let rip with your machine guns. This makes the game far more action-packed than most jet-plane sims. Navigation becomes easier after a few games, as most of the battles take place over the same area, but once you find your base there's still the landing to cope with.

A fabulous change from the usual faster-than-sound flight simulators.

Take on the Hun in this extremely playable WW1 flight sim.

### THUNDERHAWK Core Design £30.99

From fighter-planes we move onto whirlybirds, with the AH-37M Thunderhawk, a multi-role attack helicopter.

The onus of this game is action rather than complexity, which is reflected in the lightening speed it plays at. The backgrounds and scenery are simplistic, but plenty of effort has been put into the enemy units. There are loads of things to shoot at, from unarmed convoys to tanks, anti-aircraft batteries and foot-soldiers to other helicopters and fighter-planes.

This game is packed full of inspired touches. For instance, when anti-aircraft guns open up you actually see the bullets streaking up towards you and, as your helicopter is damaged, bits of the control panel start going on the blink and bullet holes appear in the window. Fortunately, you have a large arsenal of missiles to choose from, as well as a turbo cannon mounted on the front of the 'copter.

Because action is the name of this game the controls have been made as simple as possible. Speed and weapons selection are all controlled via combinations of joystick movement and the fire button. Three large monitors beneath the window show all the information you need to keep airborne, which leaves you more time to concentrate on shooting things.

The missions are arranged in a very sensible manner. They come in groups of five, with each sub-stage linked to the next. This means that anything you fail to destroy in one mission can come back at have a pop at you in the next.

Thunderhawk is without doubt the most action-packed flight simulation there is on the Amiga.

Fly the most advanced plane in the world - the F19.

### F-19 Microprose £30.99

With this game Microprose dumps you in the rather smart hot-seat of the USAF's latest and greatest war-plane, the F-19 Stealth Fighter.

What sets this apart from other modern-day aircraft simulations is the amount of strategy involved. Many games require you to simply get airborne and launch a couple of missiles at a blip on your radar. F-19, however, calls on your skills as a navigator as well as a pilot to guide the aircraft undetected into enemy territory. This is done in a number of ways. A bar graph shows how visible your plane is to enemy radar and when it passes a certain level it can be seen. To keep it hidden you have to keep the jets running below a certain temperature, the plane flying well below 1000 feet and the bomb doors closed until you really need to open them.

Like most Microprose simulations, the game is divided into a number of sections. The easiest is the American training missions, where friendly planes mock-dogfight with you and launch dummy missiles. From there the game moves to the Mediterranean and covert strikes against terrorist bases in Libya, and then onto the Gulf and central Europe during World War Three.

An excellent flight sim for experienced pilots and beginners alike.

### Up, up and Away

#### PRO-FLIGHT, Hi-Soft £19.95

Realism is the name of the game in this Tornado sim from Hi-Soft. They claim that it has been tested by actual Tornado pilots, who gave the game the thumbs up.

Whether that's true or not, this is one hell of a sim. There's a staggering amount of controls and instruments which take a fair amount of time to get used to. Once airborne it takes an effort just to fly in a straight line, let alone pull any kind of stunt flying.

This is one of the toughest flight-sims you can get, although it's a little short on action. Even veteran pilots will find a challenge in this.

#### F-15 STRIKE EAGLE 2, Microprose, £30.99

Programmed by the team behind F-19, Strike Eagle features less strategy but far more action.

The game has plenty of features to make it accessible to beginners, including automatic landings and a no-crash option. Because it was written in '91, it became the first flight-sim to take advantage of the scenario material thrown up by the Gulf war.

There's plenty to do and it's really fast, but even so it's a little too easy at times.

#### GUNSHIP, Microprose, £25.99

The original PC and C64 versions of Gunship are now about four years old, and the slightly newer Amiga version does reflect this age.

It has all the characteristic trimmings of a Microprose sim, such as dozens of missions set around the world and excellent attention to detail. This is a very different game from Thunderhawk, for starters you spend a lot more time popping up from behind hills then disappearing before the shooting starts, it's also a lot more realistic. Unfortunately, it lacks the action of Core's simulation, which has the definite edge over this game. Watch out for a review of the updated Gunship 2000 in an upcoming issue of CU Amiga.

#### THEIR FINEST HOUR, US Gold £25.99

What separates this game from most flight sims is that the graphics are sprite rather than vector based, which gives it a nice look, but makes the game considerably slower than many of its rivals.

Naturally, you're stuck in an RAF aircraft of your choice, be it fighter or bomber, and instructed to fly to the battle zone to drop bombs on or shoot down various bits of Nazi equipment.

Touches like the smoke which billows out of crippled bombers and the way you get to attack formations of enemy planes make this game fun to play, although it lacks the extra features and speed to make it a full-blown classic.

# SPORTING GAMES

*A sporting life can be one of fame and fortune but, for the rest of the population, all that we're capable of doing is injuring ourselves and watching Grandstand on TV. Of course, you could always participate with your Amiga. Heck, you don't have to embarrass yourself and the worst injury you can suffer is joystick wrist or fire-button finger. So, here are a few of the safe alternatives to real-life sporting encounters.*

## PGA TOUR GOLF

Electronic Arts £25.99

Get in the swing of things with one of the best golf sims available, the superlative *PGA Tour Golf* which now comes in an especially enhanced version with extra courses.

*PGA Tour Golf* lets you take to the fairways of the world where only pros and company execs can afford to tread.

This is really the complete golf game. It has all the hazards of real life, including unpredictable wind and birds which chirp to put you off mid-stroke. To take a shot you first select a club, then the direction you want to strike the ball in. Holding down the fire button powers up a gauge which determines how hard your golfer will swing. Let go at the right point, then hit the fire button again when the gauge returns to zero. Doing so too soon slices the ball, and too late creates a very nasty hook shot. It's this ease of control which helps make the game so attractive. Naturally the courses come with hazards such as bunkers and lakes, and the normal penalties apply, along with all the usual rules such as re-takes and drop shots. Unfortunately, there's no cheating with the Amiga marking your score card.

On top of the excellent gameplay are the superb graphics. Although not much can be done with a predominantly green landscape, the golfer is superbly animated which gives a very nice overall effect. Rather than just have you going around various holes swiping at the ground, you can compete against a friend or a posse of computer golfers in a tournament over 18 or 72 holes. Without a doubt the best golf game outside of *St Andrews*.

## SPEEDBALL 2

Renegade £25.99

This game holds many titles in its field such as best sports game, most violent sports game and the game we'd most like to see in real life.

*Speedball* is a brutal future sport where the object is to score goals. There are no rules. The ball can be carried, any kind of violence is acceptable including kicks, punches and body checks and performance-enhancing gadgets are perfectly legal. The players are encased in armour, not just to protect themselves, but to allow them to hit harder. The controls are very simple, you move the player nearest the ball and if he's holding it pressing the button will make him pass while a quick tap is a shot.

Icons appear on the pitch at random intervals, and when collected can cause the other team to be paralysed for several seconds, or simultaneously fall over. There are also several extras on the walls at the side of the arena. Hurl the ball into a score multiplier and any subsequent goals will be worth 50% more, while hitting a power-pod electrically charges the ball so it stuns any opponents it hits.

The game can either be played as a knockout tournament or a league. The latter requires you to put your management cap on as you choose your team, buy new players and decide what equipment you want to spend your winnings on. Apart from its fantastic playability, *Speedball 2* also boasts great graphics and fantastic sound effects and music. This isn't just the best Amiga sport game, it's one of the best Amiga games.

The completely brilliant *Speedball 2* – possibly the greatest Amiga game ever.

### PRO TENNIS TOUR 2 UBI Soft £25.99

The only time normal, unsporting types take to tennis courts is during the two wet weeks each year when the country is gripped with Wimbledon fever. But after you retire with tennis elbow or a twisted knee, what's next? You could always dig out your Amiga and try your hand at an altogether safer version of the sport. *Pro Tennis Tour 2* takes you to some of the world's top tournaments where you can try your hand at beating some of the top players. All court preferences are catered for, with grass, clay and hardcourts selectable at the start of a match.

Playing a shot is dead simple. Provided you steer your player into the right position, pressing fire starts the bat swinging then moving the joystick determines what type of shot is played. All the strokes you'd expect to see at Wimbledon are included (except the flashy one where they hit the ball between their legs) such as lobs, crosses and smashes. Like the real thing, timing is essential to simply return a shot or catch your opponent wrong footed or on the wrong side of the court. You can also play from the baseline or up against the net, where the shots change to those appropriate to the position.

Very fast and very easy to get into, all it's missing are digitised grunts and umpire abuse. A lot cheaper, and easier, than queuing for 20 hours to get a seat on the centre court.

### RBI 2 Domark £29.99

While the American baseball world series only consists of Canada and the States, us Brits can now take a crack at entering the hall of fame in this superb game from Domark.

RBI actually stands for Runs Batted In, and that's the aim of the game. A baseball match is divided into nine innings, which are split into two halves. The first has your team up and batting, and all you've got to do is to slug the ball out of the park, or bunt which is where you just tap the ball to try and catch the fielders off-guard. When there's a runner on a base you get to determine when, if at all, he should try and steal the next one. Other than that this is plain sailing. The usual rules apply, so swinging and missing three times means you're out, as does being caught. It's also nice to note that the computer pitchers do make mistakes, and four bad pitches leads to a walk, where everyone gets to move one base along without the fuss of a ball being hit.

When three batsmen are out play swaps and it's your turn to pitch. What makes this game so good is that the programmers have done away with most of the jargon and opted for straightforward fun. The graphics are large and nicely animated and the game plays exceptionally well.

### And They're On The Final Bend...

#### CYBERBALL Respray £9.99

Ever wanted to know what American football will look like in 100 years time? Well, you actually get to play it in *Cyberball*.

Gone are the human players and in come the robots. A team is made up from several different kinds, each with different roles such as blocking or running. To spice the game up a bit the ball now explodes if it doesn't reach an endzone within a set time. This can be turned to your advantage by throwing for an interception just as it's about to go bang.

Although *Cyberball* is a little rough around the edges, it's playable all the same. If it's American football you're after, though, look elsewhere.

#### LINKS US Gold £35.99

This golf game stunned PC owners when it was first released, although it failed to have the same impact on the Amiga.

It's problem lies in its speed, it just isn't fast enough. The graphics are all in HAM mode and look fantastic, and it's this which slows it up. Apart from that, though, *Links* has a very simple, yet comprehensive control system and plenty of features.

If you've had enough of *PGA Tour Golf*, give this a look, but if you're after your first golf game this isn't the place to start.

# BUDGET TITLES

Ever since Mastertronic announced that they were going to release good quality games at an affordable price, the budget software market has never stopped expanding. Most of the stuff you can get now is re-released classics of a year ago, so if you're looking for a cheap way to boost your software collection, this is the place to look. Here's a quick run down of some of the best available.

## LOTUS ESPRIT TURBO CHALLENGE GBH £9.99

The original all action racing game. Well, it isn't really, but it's still great fun, even with two other Lotus games available. Forget millions of courses and all kinds of weather conditions. This is just straightforward racing while competing in a league table with 19 other drivers. It's fast and very playable, although there are one or two playing glitches, such as the fact that your car stops dead if it hits something else. Other than that, you'd be a fool to miss out, especially at this price!

## PRINCE OF PERSIA

### Respray £9.99

The ultimate graphic adventure, and now available for under a tenner! There can't be many games that have this standard of animation. The guys at Broderbund really went over the top to bring you the adventures of a man rescuing a trapped princess, the animation has to be seen to be believed. As far as we're concerned, it's worth spending the money just to see the main character do a running jump. Classic stuff.

Often overlooked, *Team Suzuki* is a very fast and enjoyable bike sim.

## TEAM SUZUKI GBH £9.99

Gremlin's state of the art bike racing game, and the only one to realistically portray biking – turning off the view of the handlebars makes it frighteningly realistic! By having as few roadside objects as possible, the game is fast and very smooth, with none of the wild lurching of, say, Psygnosis' *Red Zone*. There's only a dozen tracks and three engine sizes to play with, and after a while it all gets a bit samey. A lot of fun to play, though, but a shame it doesn't have a link option.

## PANG Action 16 £7.99

A classic old arcade game, reworked by Ocean France to huge acclaim. A simple idea, involving shooting balloons before they bounce on you (sort of a ground based *Asteroids*), the Amiga conversion needs lightning reflexes to play, so it's just as well that the controls are as good as they are. Slightly better than Demonware's *Oops Up*, and every bit as good as the arcade version.

## F/A-18 INTERCEPTOR Electronic Arts £10.99

It was a stunning flight/combat simulation when it appeared in the early days, and it's still one now. Although quite basic in approach to some of the later simulations, there's still nothing like it for speed or realism. Just watching the map zoom in from an overall view of the west coast of the US, right down to a full screen view of your aircraft is stunning. This was the first sim to feature external views, and still ranks as one of the most addictive sims ever seen. Cheap at twice the price.

## SEUCK GBH £9.99

Not quite as efficient as the C64 product it was converted from, the *Shoot 'Em Up Construction Kit* is still a handy little package to have. From scratch, you can build an entire stand-alone scrolling shoot 'em up with as many bells and whistles as you require. All is done from a simple set of menus, laid out in a logical and straightforward way (design sprites, design backdrop, define player limitations, define levels and then add all the attack waves). Three games are included, and they show off quite realistically what the pack can do. You'll never create another *SWIV* with it, but you'll definitely be able to knock out something to impress your friends.
